

SAINT-GOBAIN TO LAUNCH ITS FIRST LOW-CARBON STONE WOOL PRODUCTION LINE IN SPAIN

Saint-Gobain announces a **€40 million** investment to expand and decarbonize its insulation plant in Azuqueca, near Madrid, Spain.

This investment will modernize **the stone wool production line** and install a **state-of-the-art electric furnace** to replace the current one that runs on fossil fuels. The Azuqueca plant will be **the Group's first facility to feature an electric stone wool production line**. The new installations are expected to be operational in the first half of 2026.

This modernization will increase stone wool production capacity by approximately 40%, meeting the growing demand in the Spanish market for sustainable construction materials. At the same time, this flagship project will enable the plant **to reduce its CO₂ emissions by 70%** (scope 1 and 2) compared to 2017 levels.

The Azuqueca plant benefits from a zero-carbon electricity supply thanks to a Power Purchase Agreement (PPA) signed in 2022 with ENDESA, ensuring the supply of green electricity until 2034 for a total volume of 150 GWh.

This project allows Saint-Gobain to strengthen its range of high-performance and sustainable insulation solutions to enhance occupant comfort. It is part of Saint-Gobain's commitment to achieving net-zero carbon emissions by 2050 across scopes 1, 2, and 3.

About Saint-Gobain

Worldwide leader in light and sustainable construction, Saint-Gobain designs, manufactures and distributes materials and services for the construction and industrial markets. Its integrated solutions for the renovation of public and private buildings, light construction and the decarbonization of construction and industry are developed through a continuous innovation process and provide sustainability and performance. The Group, celebrating its 360th anniversary in 2025, remains more committed than ever to its purpose "MAKING THE WORLD A BETTER HOME".

€47.9 billion in sales in 2023

160,000 employees, locations in 79 countries

Committed to achieving net zero carbon emissions by 2050
