

Vertical Storage Bay

Vertical Storage Racks are a great, space efficient solution for storing pipes, timber and beading. Popular with DIY and hardware stores, our range of vertical rack provides organised and accessible storage for long length items with single or double sided options to choose from and optional dividers to help you segment your stock.

Our vertical racking range also includes a number of racking designs for sheet storage. For metal or chipboard storage, take a look at our Multi-height sheet rack, an easy access racking design for a selection of sheet dimensions. Designed from solid steel, this product is delivered completely assembled. Alternatively, our affordable Sheet Rack provides vertical storage for panels of wood or metal, complete with 3 storage compartments. With our range of vertical racking products, you can store materials of up to 2.4m high.

If you have an existing pallet racking system, you can adapt your ground level pallet locations into a vertical storage rack by adding Pallet Racking 'D Bars'. These are metal supports that allow you to create pick locations for long length items by simply attaching them to your existing pallet racking beams. This is a great, cost efficient solution and completely maximises your space.

Key Features
