

Floating Shelf

Installation Manual

Safety Notes:

- Ensure at least one bracket is securely fastened to a wall stud to support the weight of the shelf and the items it will hold.
- Use appropriate drywall anchors if a stud is not available to prevent the shelf from pulling out of the wall.
- Do not overload the shelf beyond its weight capacity to avoid accidents.
- Keep the installation tools and small parts out of reach of children.

<p>Determine the location for installation, using measuring tape for the required height and width.</p> 	<p>Use a level to draw a line under the shelf board</p> 	<p>Measure the space for the hidden bracket at the back of the shelf board</p> 	<p>Use the measurement of the bracket space, draw line with the level for the bracket. Align the brackets to the line and mark the spots for drilling holes for screws.</p> 
Step 1	Step 2	Step 3	Step 4
<p>Determine if studs behind the marks with a stud finder. Drill the pilot holes on the marks, double check that the marks are level and aligned.</p> 	<p>Use a hammer to insert anchors into the holes without a stud behind. Do not insert anchors if a stud is behind the holes.</p> 	<p>Using tools (screw driver) to fasten the brackets to the wall with the 2-inch screws provided.</p> 	<p>Insert the shelf board on top of the brackets and secure the board using the 1-inch screws provided.</p> 
Step 5	Step 6	Step 7	Step 8
<p>Included parts:</p> <div>  Brackets  Shelf Board  2-inch screws  Anchors  1-inch screws </div>			
<p>Tools needed (not included)</p> <div>  Hammer  Drill  Screwdriver  Level  Pencil  Measuring tape </div>
