Sleipner Motor AS  
P.O. Box 519, Arne Svendsensgt. 6-8  
N-1612 Fredrikstad, Norway

MC\_0020

S-Link gateway GW-1 is a NMEA2000® Certified device for connecting NMEA2000® CAN bus equipment to the S-Link bus. Connect an S-Link spur cable from the gateway to S-Link backbone, and non S-Link equipment to the CAN Interface M12 male connector or NMEA0183 GPS antenna to the NMEA0183 connector.

Power to the gateway is supplied from the S-Link so no external power is required.

## CAN Interface

### Connection

The GW-1 does not feed any power to the CAN-bus and connected devices has to be power feed from elsewhere. The GW-1 does not include any termination resistor on the M12 male connector output, so terminating resistors is required on the CAN bus. CAN L & CAN-H are galvanic isolated. Use standard NMEA 2000® micro cable to connect to the CAN interface connector. Sleipner Motor AS do not provide NMEA 2000® micro cables.

### Supported NMEA2000® PGN's

|                                  |            |
|----------------------------------|------------|
| Navigation PGN's:                |            |
| GPS Position - Rapid Update      | PGN 129025 |
| GPS COG & SOG - Rapid Update     | PGN 129026 |
| GPS System Time                  | PGN 126992 |
| GPS GNSS Position Data           | PGN 129029 |
| Engine Parameters, Rapid Update  | PGN127488  |
| Transmission Parameters, Dynamic | PGN127493  |
| Vessel Heading                   | PGN 127250 |
| Rudder                           | PGN127245  |

### LED indication

|                                    |                                                                |
|------------------------------------|----------------------------------------------------------------|
| TX LED ( <b>Reference 1</b> ) off: | Not sending any messages.                                      |
| TX LED flashing:                   | Flashing at max 100ms on and 100ms off when sending messages.  |
| RX LED ( <b>Reference 2</b> ) off: | Not receiving any messages.                                    |
| RX LED flashing:                   | Flashing at max 100ms on and 100ms off when receiving messages |

MG\_0424

**Connection**

The V OUT pin can feed power to a single GPS antenna with maximum 100mA, and it is internally fused. V OUT is S-link bus voltage. RX A(+) & TX B(-) are galvanic isolated

**Baud rate**

4800 baud and 38400 baud is supported, and are set automatically.

**Supported NMEA0183 sentences**

\$GxRMC sentences from all positioning systems is supported.

**LED indication (Reference 3)**

- LED off: No valid NMEA0183 GPS signals.  
 LED flashing: Flashing 100ms on and 100 off for each valid GPS message received.  
 - Valid GPS antenna message at 38400 baud normal flashing on/off (100ms/100ms).  
 - Valid GPS antenna message at 4800 baud normal flashing on/off (100ms/900ms)

**GNSS Antenna Prioritization**

GNSS antennas priority sequence is 1. NMEA0183 with 100ms update rate 2. NMEA0183 with 1000ms update rate.

GW-2Y will only forward one of the NMEA2000® GPS antenna signal to S-link if more than one antennas is present on the NMEA2000® bus.

If more than one GW-2Y have GNSS signal(s) then GW-2Y's will prioritize on antenna type from the list above and only one GW-2Y will broadcast GNSS signals on the S-link bus.

All this requires GW-2Y firmware V1.021 or newer.

**Status LED (Reference 4)**

- LED off: No power to the device.  
 LED on: S-Link communication and power OK.  
 LED flashing (on/off (500ms/500ms)): No S-Link communication but power is OK.

|           |   |        |
|-----------|---|--------|
| NMEA 0183 | ● | V OUT  |
|           | ● | GND    |
|           | ● | Rx (-) |
|           | ● | RX (+) |

# Installation Guide

## Responsibility of the Installer

MC\_0038

The installer must read this document to ensure necessary familiarity with the product before installation.

Instructions in this document cannot be guaranteed to comply with all international and national regulations. It is the responsibility of the installer to follow all applicable international and national regulations when installing Sleipner products.

The recommendations given in this document are guidelines ONLY, and Sleipner strongly recommends that advice is obtained from a person familiar with the particular vessel and applicable regulations.

This document contains general installation instructions intended to support experienced installers. If you are not skilled in this type of work, please contact professional installers for assistance.

If required by local regulation, electrical work must be done by a licensed professional.

Appropriate health and safety procedures must be followed during installation.

Faulty installation of Sleipner products will render all warranties given by Sleipner Motor AS.

Ensure appropriate access to Sleipner products during installation planning for service, inspection and component replacement.

When installing an S-Link™ system connect ONLY original Sleipner S-Link™ products or other authorized control equipment directly to the S-Link™ bus.

Connecting non-authorized third-party equipment, it must always be connected through a Sleipner supplied interface product.

Any attempt to directly control or connect into the S-Link™ control system without a designated and approved interface will render all warranties and responsibilities of all of the connected Sleipner products. If you are interfacing the S-Link™ bus by agreement with Sleipner through a designated Sleipner supplied interface, you are still required to install at least one original Sleipner control panel to enable efficient troubleshooting if necessary.

MC\_0105

**Failure to follow the considerations and precautions can cause serious injury, damage and will render all warranties given by Sleipner Motor as VOID.**

MC\_0411

1. Fasten the GW-1 box to a solid surface using four mounting screws.
2. Attach the required cables to the GW-1.

| Measurement code | Measurement description | GW-1  |      |
|------------------|-------------------------|-------|------|
|                  |                         | mm    | inch |
| +H               | Total Gateway Height    | 41    | 1.6  |
| H                | Gateway Height          | 25.5  | 1    |
| W                | Gateway Width           | 50    | 2    |
| L                | Total Gateway Length    | 126.5 | 5    |
| +L               | Gateway Length          | 100   | 3.9  |

S-Link is a CAN-based control system used for communication between Sleipner products installed on a vessel. The system uses BACKBONE Cables as a common power and communication bus with separate SPUR Cables to each connected unit. Only one S-Link POWER cable shall be connected to the BACKBONE Cable. Units with low power consumption are powered directly from the S-Link bus.

## Main advantages of S-Link system:

- Compact and waterproof plugs.
- BACKBONE and SPUR Cables have different colour coding and keying to ensure correct and easy installation. BACKBONE Cables have blue connectors and SPUR Cables have green connectors.
- Different cable lengths and BACKBONE Extenders make the system scalable and flexible to install.

## Installation of S-Link cables:

Select appropriate cables to keep the length of BACKBONE- and SPUR Cables to a minimum. In case of planned installation with total BACKBONE Cable length exceeding 100 meters please consult your local distributor. The S-Link cables should be properly fastened when installed to avoid sharp bend radius, cable chafing and undesired strain on connectors. Locking mechanism on connectors must be fully closed. To ensure long lifetime, cables, T-Connectors and Extenders should not be located so that they are permanently immersed in water or other fluids. It is also recommended to install cables such that water and condensation do not run along the cables and into the connectors.

The POWER Cable should ideally be connected around the middle of the BACKBONE bus to ensure an equal voltage drop at each end of the BACKBONE Cable. The yellow and black wire in the POWER Cable shall be connected to GND and the red wire connected to +12VDC or +24VDC.

To reduce the risk of interference, avoid routing the S-Link cables close to equipment such as radio transmitters, antennas or high voltage cables. The backbone must be terminated at each end with the END Terminator.

SPUR cables can be left unterminated to prepare for the installation of future additional equipment. In such cases, ensure to protect open connectors from water and moisture to avoid corrosion in the connectors.

## Warranty statement

1. Sleipner Motor AS (The "Warrantor") warrants that the equipment (parts, materials, and embedded software of products) manufactured by the Warrantor is free from defects in workmanship and materials for purpose for which the equipment is intended and under normal use and maintenance service (the "Warranty").
2. This Warranty is in effect for two years (Leisure Use) or one year (Commercial and other Non-leisure Use) from the date of delivery/purchase by the end user, with the following exceptions:
  - (a) For demonstration vessels, or vessels kept on the water, the dealer is considered as the end user from 6 months after their launch of the vessel;
  - (b) The warranty period starts no later than 18 months after the first launch of the vessel.
 Please note that the boat manufacturer and dealer must pay particular attention to correct maintenance and service both by the products manuals as well as general good practice for the location the boat is kept in the period the boat is in their care. In cases where the 6 and 18 months grace periods for boat builders and dealers are passed, it is possible to obtain a full warranty upon inspection and approval of the warrantor or such representative.
3. Certain parts, classified as wearable or service parts, are not covered by the warranty. A failure to follow the required maintenance and service work as described in the product manual render all warranty on parts or components directly or indirectly affected by this void. Please also note that for some parts, time is also a factor separately from actual operational hours.
4. This Warranty is transferable and covers the equipment for the specified warranty period.
5. The warranty does not apply to defects or damages caused by faulty installation or hook-up, abuse or misuse of the equipment including exposure to excessive heat, salt or fresh water spray, or water immersion except for equipment specifically designed as waterproof.
6. In case the equipment seems to be defective, the warranty holder (the "Claimant") must do the following to make a claim:
  - (a) Contact the dealer or service centre where the equipment was purchased and make the claim. Alternatively, the Claimant can make the claim to a dealer or service centre found at [www.sleipnergrouper.com](http://www.sleipnergrouper.com). The Claimant must present a detailed written statement of the nature and circumstances of the defect, to the best of the Claimant's knowledge, including product identification and serial nbr., the date and place of purchase and the name and address of the installer. Proof of purchase date should be included with the claim, to verify that the warranty period has not expired;
  - (b) Make the equipment available for troubleshooting and repair, with direct and workable access, including dismantling of furnishings or similar, if any, either at the premises of the Warrantor or an authorised service representative approved by the Warrantor. Equipment can only be returned to the Warrantor or an authorised service representative for repair following a pre-approval by the Warrantor's Help Desk and if so, with the Return Authorisation Number visible postage/shipping prepaid and at the expense of the Claimant.
7. Examination and handling of the warranty claim:
  - (a) If upon the Warrantor's or authorised service Representative's examination, the defect is determined to result from defective material or workmanship in the warranty period, the equipment will be repaired or replaced at the Warrantor's option without charge, and returned to the Purchaser at the Warrantor's expense. If, on the other hand, the claim is determined to result from circumstances such as described in section 4 above or a result of wear and tear exceeding that for which the equipment is intended (e.g. commercial use of equipment intended for leisure use), the costs for the troubleshooting and repair shall be borne by the Claimant;
  - (b) No refund of the purchase price will be granted to the Claimant, unless the Warrantor is unable to remedy the defect after having a reasonable number of opportunities to do so. In the event that attempts to remedy the defect have failed, the Claimant may claim a refund of the purchase price, provided that the Claimant submits a statement in writing from a professional boating equipment supplier that the installation instructions of the Installation and Operation Manual have been complied with and that the defect remains.
8. Warranty service shall be performed only by the Warrantor, or an authorised service representative, and any attempt to remedy the defect by anyone else shall render this warranty void.
9. No other warranty is given beyond those described above, implied or otherwise, including any implied warranty of merchantability, fitness for a particular purpose other than the purpose for which the equipment is intended, and any other obligations on the part of the Warrantor or its employees and representatives.
10. There shall be no responsibility or liability whatsoever on the part of the Warrantor or its employees and representatives based on this Warranty for injury to any person or persons, or damage to property, loss of income or profit, or any other incidental, consequential or resulting damage or cost claimed to have been incurred through the use or sale of the equipment, including any possible failure or malfunction of the equipment or damages arising from collision with other vessels or objects.
11. This warranty gives you specific legal rights, and you may also have other rights which vary from country to country.

## Patents
