Lighting Effect 8	N/A	Fn + Home	✓
Pulsating	N/A	Fn + Delete	✓
Color Change	N/A	N/A	✓
Permanent	N/A	Fn + End	N/A

The settings of an individual color from the RGB spectrum only works with the “Permanent” lighting effect. Therefore, first select “Permanent” lighting effect. Press and hold the Fn key and then press twice the End key.

The “Permanent” lighting effect has seven preset colors (red, green, yellow, blue, turquoise, pink and white), which can be access and cycled through by repeatedly pressing the Fn + End key combination. The original color is overridden.

To increase the red component of a color, press Fn + A and to reduce press Fn + Z. Increase the green component with Fn + S, and reduce with Fn + X. The blue component increases with Fn + D, and reduces with Fn + C. If the color components can no further increase or decrease, the corresponding keys light up in the respective color they control.

To set up lighting profiles, press and hold the Fn key, and then press ESC. The lighting profile keys F1 to F4 will start blinking. Now select a profile by pressing the corresponding F-key; then press all the keys that should be permanently illuminated. Press a key several times to change its illumination color. Choose from red, green, yellow, blue, turquoise, pink and white. To turn off the illumination on a particular key, cycle through all the colors until the lighting goes out. While pressing and holding the Fn key, press the ESC key to save the selected key illumination in the previously selected lighting profile key.
