❖ Introduction

❖ Replacing DARWIN with the GX/GP/GM

- You can replace your existing DARWIN instruments with a GX/GP/GM model to suit your present and future application
- This guide explains replacement in the following three parts.
 - 1 Replacing DARWIN with the GX/GP
 - 2 Replacing DARWIN with the GM
 - 3 Other Replacement Suggestions (applicable to GX, GP, and GM)

1 Replacing DARWIN with the GX/GP

❖ 1-1 GX/GP Features and Benefits

Feature	Benefit
High speed, multi channel, high accuracy	450 channels can be measured with high accuracy at 100 ms intervals.
DARWIN Compatible Communication	CENTUM and STARDUM that are using the DARWIN communication package can be connected without any modifications.
Paperless (with the DR)	Reduces the running costs of paper, ribbon cassettes, and other items Saves data storage space
Write freehand messages	You can handwrite messages, just like on paper
Modular format	Add or change modules according to your application
Multichannel capability	The standard GX10/GP10 and GX20 are scalable up to 100 channels The GX20/GP20 large memory model can measure on up to 450 channels
Large memory: 500 MB/1.2 GB (with the GX20/GP20 large memory model)	Measured data recorded and saved to internal memory Enables long-duration recording
External memory medium (SD memory card)	Measured data in internal memory can be automatically saved to files at specified intervals (Autosave mode)
PC-independent (with the DA100)	No PC required for recording and saving of measured data Enables monitoring on a variety of displays
Web application (web server)	Enables real time remote monitoring from a browser
Custom displays	You can monitor data using custom screens created on DAQStudio screen builder software

❖ 1-3 Replacing Standalone Models

- ❖ Increased channels, PC-independence, long duration data recording, paperless records

You can have more channels, larger memory, longer duration recordings, and PC-free operation (with the DA100).

❖ 1-6 System Configuration Comparison (Maximum Configuration)

❖ Comparison of configurations with GX/GP large memory models

❖ 1-7 Example Replacement 1 (Typical)

❖ Replacing 300 thermocouples

By installing modules in the GX/GP, you can save space by reducing expansion units. Plus, you get an additional 30 measurements.

Expansion unit/module	Model	Qty	Notes
Subunits	DS600	5	
Universal input module	DU100-11	30	10 ch

Expansion unit/module	Model	Qty	Notes

Expansion module	GX90EX	1	

❖ 1-7 Example Replacement 2 (Typical)

❖ Replacing 210 thermocouples and 30 alarm outputs

By reducing the number of expansion units you can save space while adding 10 additional channels.

Expansion unit/module	Model	Qty	Notes
Subunit	DS600	4	
Universal input module	DU100-11	21	10 ch

2 Replacing DARWIN with the GM

2-1 GM Features and Benefits

Feature	Benefit
High speed, multi channel, high accuracy	420 channels can be measured with high accuracy at 100 ms intervals.
DARWIN Compatible Communication	CENTUM and STARDUM that are using the DARWIN communication package can be connected without any modifications.
Block architecture	Easy addition of modules and modification of configuration according to the measurement application.
Module base system	Incorporates a system in which module bases are linked and modules are installed. Module insertion and removal are easy, improving maintainability.
Multichannel capability	The standard GM10 is scalable up to 100 channels. The GM10 large memory model can measure on up to 420 channels.
Large memory: 500 MB/1.2GB* (*with the GM10 large memory model)	Measured data recorded and saved to internal memory. Enables long-duration recording.
PC-independent (with the DA100)	Measured data is saved in internal memory, so there is no need for a PC for recording and saving data.
External memory medium (SD memory card)	Measured data in internal memory can be automatically saved to files at specified intervals (Autosave mode).
Web application (web server)	Real time monitoring from a Web browser is possible. No need for data acquisition software.
Paperless (with the DR)	Reduces the running costs of paper, ribbon cassettes, and other items Saves data storage space.

2-5 GM System Configuration 2

GM10-2 Large memory model configuration

Connect up to 6 sub units for up to 420 channels of measurement.

Up to 420 ch

Chain up to 6 subunits

By combining a main unit with subunits (Multi unit system), you can measure on up to 420 channels.

Reduce wiring with distributed installation

When the site (DUT) and datalogger are installed in different locations, you can place the sub unit at the site and monitor without long-distance signal wiring of thermocouples and other sensors.

3 Other Replacement Suggestions (applicable to GX, GP, and GM)

❖ 3-1 When Using Data Acquisition Software (Sold Separately)

❖ Replace DAQ32Plus and DAQLOGGER with the GA10

Switching over to the GA10 gives you data acquisition of 100 ms, connectivity with up to 100 units, and access to up to 2000 channels. Manage your system with multilogging (multiple asynchronous data acquisitions) and user privileges (4 levels: owner, manager, operator, and monitor).

❖ 3-2 DARWIN Compatible Communication Functions 1

❖ Replacing existing programs with the GX/GP/GM

The GX/GP supports DARWIN commands (with a few exceptions).

You can use the programs you already created for data acquisition on the GX/GP/GM.

Support for Ethernet, RS-232 (GX/GP only), RS-422/485.

Note)

You must match up your GX/GP/GM system and module configurations with those of the DARWIN system.

You cannot use the DARWIN compatible communication functions to connect with DAQ32, DAQ32Plus, or DAQLOGGER.

3-2 DARWIN Compatible Communication Functions 2

Supported Commands

Instantaneous Data Output Commands

Command	Description
EF	Outputs measured data and math data in binary format.
EL	Outputs unit and decimal point information of a specified channel in ASCII format.
EB	Sets the byte output order.

ESC+T Command

Command	Description
Esc+T	Prepares to output the data selected with the TS command.

Setting Commands

Command	Description
SR	Sets the range.
SN	Sets the unit (scale unit).
SA	Sets an alarm.
SD	Sets the date and time.
SV	Sets moving average.
CM	Sets math input data (option).

3-2 DARWIN Compatible Communication Functions 3

Commands Applicable to RS-422/485 Only

Command	Description
Esc+O	Open Command (address a communication destination)
Esc+C	Close Command (close the addressed state of a device)

Data Output Request Commands

Command	Parameter	Description
TS	0: Measured data	Selects the talker output data.
	1: Setting parameters	
	2: Unit information	
	5: System configuration information	
	9: Setup mode setting data output	
FM	0: Measured data (ASCII)	Selects the output format of measured/math data.
	1: Math data (binary)	
	2: Math data (ASCII)	
	3: Math channel (binary)	
LF	—	Sets the output channel for the setting data output, unit, and decimal place information.
CF	—	Sets the system configuration data format.
VF	—	Relay status output request.
BO	—	Sets the byte output order.
ESC+S	—	Status byte output command

❖ 3-2 DARWIN Compatible Communication Functions 4

Control Execution Commands

Command	Description
AR	Resets alarms.
IR	Resets timers.
EX	Starts, stops, resets, clears (option) math.
RS	System reconfiguration
RC	Clears RAM (initializes operation mode setting parameters).
VD	Turns on and off relays externally.
CF	System configuration data output request (diagnosis)
PS	Starts or stops recording.
MS	Starts message printing.
IM	Sets the interrupt mask.
SM	Sets the auxiliary mask.

❖ 3-2 DARWIN Compatible Communication Functions 5

❖ Handling of Commands for Functions Not Available on the GX/GP/GM Commands That the GX/GP/GM Returns Positive Responses For

Command	Description	Response	Operation
DS	Switches the setting mode.	Positive response (E0)	No operation
XE	Confirms setup setting parameters.		
UD	Setting the display mode on the upper part of the display.		
ESC+R	Switch from Local Status to Remote Status.		
ESC+L	Sets the display mode of the top display.		

Commands That Do Not Affect the Operation (Negative response)

Command	Description	Response	Operation
SX	Sets a math group.	Negative response (E1)	No effect
SI	Sets a timer (option).		
SQ	Sets a match time timer (option).		
SL	Sets event/action (option).		
SO	Sets a calculation expression (option).		
SK	Sets a calculation constant (option).		
AO	Assigns a transmission channel.		
YO	Sets the time constant for transmission output.		
ET	Sets a timeout.		

❖ 3-3 Replacing Existing DARWIN units in Stages 1

❖ When using data acquisition software (sold separately)

Add the GA10 data logging software and leave the existing DAQ32Plus or DAQLOGGER as-is. Centralize the data in one application, and then replace parts of DARWIN* with the GX/GP/GM when you are ready.

DAQ32Plus and DAQLOGGER tag settings can be used without any modifications.

❖ 3-3 Replacing Existing DARWIN units in Stages 2

❖ With the CENTUM Production Control System

With DARWIN compatible communication, you can replace your existing DARWIN in stages. This lets you phase in your replacements and avoid a large up-front investment.

3-4 Modbus connection with production control systems (CENTUM)

Measured data can be acquired through Modbus connection.

Measured data can be acquired by reading the GM internal registers from CENTUM. Replacing DARWIN is easy.
