

## SIP MIGMATE 130 TURBO – WIRE FEED MOTOR

Good Day

I live in Cape Town South Africa. I have an old SIP Migmate 130 Turbo mig welder. The wire is fed using a 24volt motor. The motor is blown. The motor is 24 volts . The motor is marked as a Johnson motor with no other markings. I do not know the speed of the motor or the wattage. The shaft is 2mm is diameter with a 12 teeth gear. The total length body length of the motor is 48mm and the diameter is 28mm in diameter. Can you supply a replacement motor.

Thank you

Peter Taylor
