►► 1. HOW IT WORKS

This product is a dehumidifier. It controls relative humidity by passing the air through the unit, forcing the excess moisture to condensate over the cooling elements. Contact with this cold surface causes the moisture in the air to condense. This condensed water then drains safely into the water tank. The dried air then passes through the condenser where it is slightly warmed and re-enters the room at a slightly elevated temperature.

►► 2. WHERE TO POSITION

Excess moisture will travel throughout your home, in the same way that cooking smells waft to every room in the house. For this reason, the dehumidifier should be positioned, so that it can draw this moist air towards it from all over the home.

Alternatively, if you have a serious problem in one area you can begin by positioning the dehumidifier close to this area and later moving it to a more central point.

When positioning the dehumidifier, ensure that it is placed on a level surface and that there is a minimum of 10 cm (4") of space on either side of the unit to allow for efficient airflow.

This dehumidifier is fitted with castors for extra mobility, if you move the unit, it should first be switched off and the water tank emptied.

We do not recommend the use of an extension lead, so please try to ensure that the unit is sufficiently close to a fixed mains socket. If it is necessary to use an extension lead, please ensure the diameter of the wires of the cable is at least 1 mm².

When the dehumidifier is in operation, outside doors and windows should be closed when necessary for most efficient use.

►► 6. DRAINAGE

While the water tank is full, the compressor will stop for self-protection and the water full indicator will turn into red. To move the water tank, pull it out squarely from the unit. After emptying the water tank, place the water tank into space. Make sure it is properly positioned, in order for the 'water full' sign to go out and your dehumidifier is operating. Please note, in case, the water tank has not been positioned well, the water full indicator will turn into red.

►► CONTINUOUS DRAINAGE

When the dehumidifier is operated at very high humidity levels, the water tank will require more frequent drainage. In this situation, it may be more convenient to set the unit up for continuous drainage with the following procedures:

1. Pull out the water tank (FIG. 5).
2. Connect the drain hole with water tube of inner diame-

ter: 11 mm. The water tube is not supplied with the unit (FIG. 6).

3. Ensure the water will always drain away freely and the tube will remain in right place. Note! In very cold weather conditions, precautions should be taken to prevent the water tube from freezing.

4. Put the water tank back to its position.

►► 7. MAINTENANCE

Always unplug the unit from the mains before carrying out any maintenance or cleaning of the unit.

CLEANING THE BODY

Use soft cloth to wipe the unit clean.

Don't ever use volatile chemicals, gasoline, detergents, chemically treated clothes, or other cleansing solutions. These all could possibly hurt the cabinet.

CLEANING THE FILTER

This dehumidifier is equipped with 2 filters (FIG. 7):

1. ANTI-DUST FILTER

Extract the filter holder, remove the active carbon filter. Use a vacuum cleaner or tap the filter lightly for easy cleaning. If the filter is particularly dirty, use warm water with a small amount of a small amount of medium strength detergent.

Make sure the filter is completely dry before replacing.

Do not expose the filter to sunlight.

2. ACTIVE CARBON FILTER (for capturing the particles of dust suspended in the air and preventing the production of bacteria.)

The active carbon filter placed under the anti-dust filter is not washable. Its life span is variable and depends on the ambient conditions where the unit is used. The filter should be checked periodically and replaced if necessary.

STORAGE

If not use the unit for an extended period of time. Please: Turing the unit off, unplug and tidy AC cord.

- Completely empty the water tank and wipe it clean.
- Cover the unit and store where it will not receive direct sunlight.

►► 8. TROUBLE SHOOTING

THE UNIT DOES NOT OPERATE:

- Is the unit plugged in?
- Is the house electricity on?
- Is the room temperature below 5°C or above 35°C? If so, then it is out of the working range of the unit.
- Ensure the humidistat (or ON/OFF switch) is turned on.
- Check the water tank is positioned properly in the unit and it is not full.
- Make sure the air inlet and outlet are not obstructed.

THE UNIT SEEMS TO DO NOTHING:

- Is the filter dusty, contaminated ?
- Is the air intake or outlet blocked up?
- Is the room humidity already quite low?

THE UNIT SEEMS TO DO LITTLE:

- ▶ Are too many windows or doors open?
- ▶ Is there something in the room producing lots of humidity?

THE UNIT IS TOO NOISY:

- ▶ Check whether the unit is sitting on a level surface.

THE UNIT IS LEAKING:

- ▶ Make sure the unit is in good shape.
- ▶ If you are not using continuous drainage, make sure the rubber plug (at the bottom of the unit) is in its position.
