## Installation manual

Differential Pressure Switch MOS-P1050

- Thank you for purchasing this Samsung product.
- Before operating this unit, please read this installation manual carefully and retain it for future reference.

# Safety Information

This installation guide will show how to install a differential pressure switch onto the ventilation system. Please read this manual thoroughly before installing the product.

## **WARNING**

Errors or unsafe practices that may result in severe personal injury or death.

## **CAUTION**

Warnings or unsafe practices that may result in minor personal injury or property damage.

 **Important instructions**

 **Do NOT attempt:**

 Water spray on the machine body, in order to prevent electric shock.

 Unplug the power plug from the wall socket.

 Do NOT disassemble.

## **FOR INSTALLATION**

## **WARNING**

 Contact a service center for installation.

- Failure to do so may result in fire, or damage to a differential pressure switch.

You must use wires that meet specifications for installation.

- Failure to do so may result in fire or damage to a differential pressure switch.

All electric works should comply with local regulations and installation work carried out by a qualified technician.

- Installation by unqualified technicians may result in a product malfunction, electric shock, and fire.

Check whether the installation work is performed in accordance with the installation instructions.

- Normal installation of a differential pressure switch may need the electrician's certificate.

# Safety Information

---

## FOR INSTALLATION

---

### CAUTION

- ① When connecting a wire, do not tighten it too much.

- Failure to do so may result in breakage of the wire.

Make sure the differential pressure switch installation doesn't cause interference with other electrical appliances, particularly in a hospital.

- Failure to do so may result in abnormal operation.

- 🚫 Do not install the product in an area where combustible gas leaks or possible gas leakage is expected.

- Failure to do so may result in breakage of the wire.

Do not install the product in conditions where it is exposed to oil, steam etc.

- Use of the product over areas exposed to oil, steam, sulfuric acid, etc may result in component damage or product malfunction.

Do not install the product in a place where acidic or alkali liquids or special solvents are used.

- Failure to do so may result in electric shock or abnormal operation.

## FOR OPERATION

---

### WARNING

- ① Do not remodel or repair the differential pressure switch yourself.

- Failure to do so may result in product malfunction, electric shock and fire, so contact a service center for repair.

When disposing of a differential pressure switch, contact a service center.

- 🚫 Do not move or reinstall an installed differential pressure switch yourself.

- Failure to do so may result in electric shock or fire.

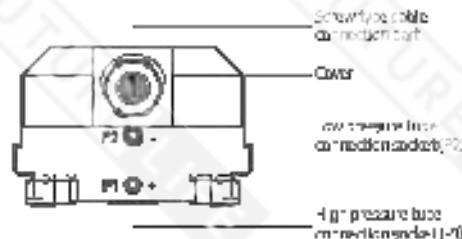

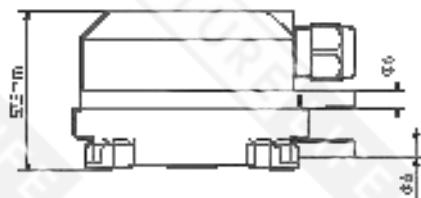

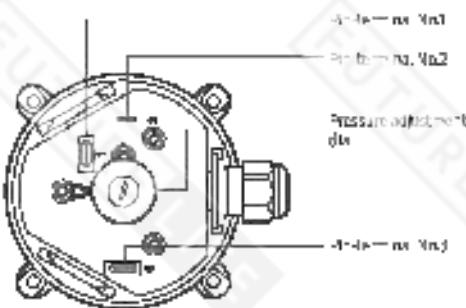

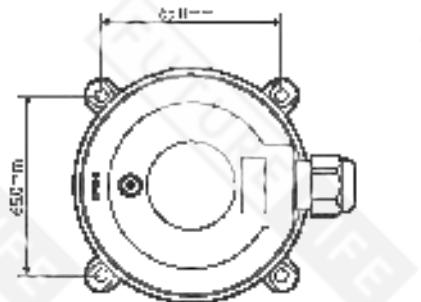

# Installing the Differential Pressure Switch

## Differential Pressure Switch

### Product and components

Name	Differential Pressure Switch	Plastic Tube	PVC Tube	Screw (PH, M4, L10)
Shape				
Name	Screw (PH, M3, L10)	Screw (TH, M4, L8)	Pin-terminal connector	Holder Wire
Shape				

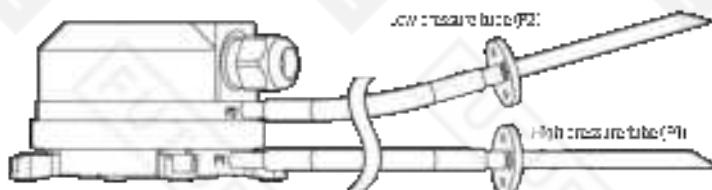

### Component description

# Installing the Differential Pressure Switch

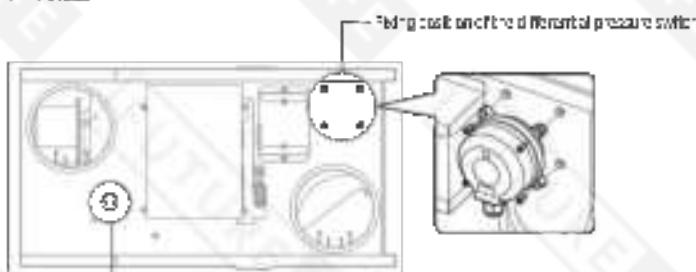

## Installing the differential pressure switch onto the ERV

- 1 Connect the PVC tubes to the two sockets on the side of the differential pressure switch, and connect the plastic tubes to the opposite side as shown in the figure.
- 2 Connect the low pressure side PVC tube to the socket P2 (upper socket) and the high pressure side PVC tube to the socket T (lower socket).
- 3 Cut the PVC tube to fit the size of the product.

- 2 Untighten the screws on the ERV, as marked in the figure, and then assemble the differential pressure switch using screws (PH, M4, and 110).

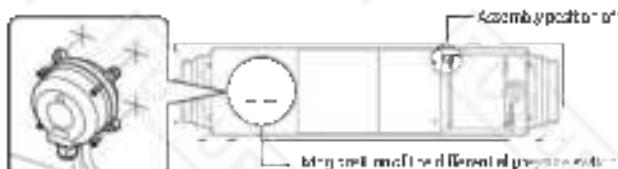

► AN32x<sup>+</sup>

Assembly position of the low pressure tube

► AN32x<sup>+</sup>, AN63x<sup>+</sup>, AN80x<sup>+</sup>, AN100x<sup>+</sup>

The screws are covered with insulation at the insulator wiring positions indicated by the + symbols.

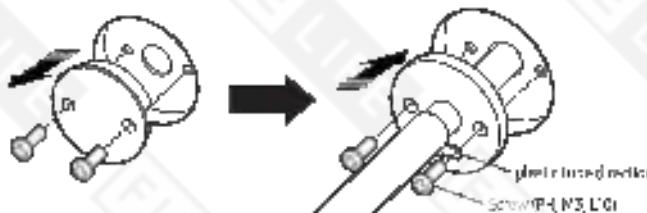

Assembly position of the low pressure tube

### CAUTION

- When installing the differential pressure switch, make sure that the socket orientation on the tube are connected face to face (low pressure side or product installed first). Failure to do so may cause moisture to enter the switch or errors to occur in differential pressure measurement.

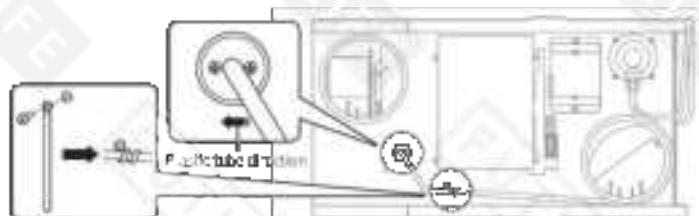

- 3 Disassemble the circular cover next to the electrical control part of the CRW, and then assemble the low pressure plastic tube connected to the differential pressure switch socket P2. Then, fix the low pressure PVC tube to the product using the holder-wire as shown in the figure.

► Disassembly of the circular cover and assembling the plastic tube

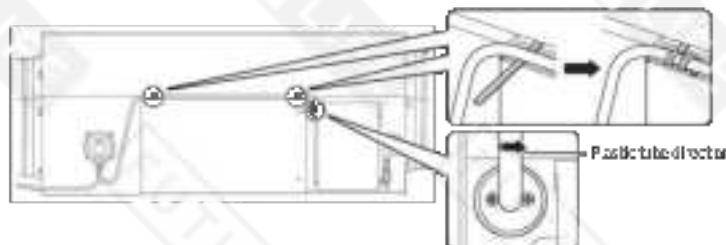

**NOTE**

- Make sure that the direction of the plastic tube as indicated by the arrow in the figure is identical with the air-flow direction.
- **AN026\***
  - Assemble the holder-wire to the screw located at the position indicated in the figure, and then fix the PVC tube.

- **AN025\*\* - AN050\*\* - AN077\*\* - AN0100\*\***
  - Fix the PVC tube using the holder-wire located at the position indicated in the figure.

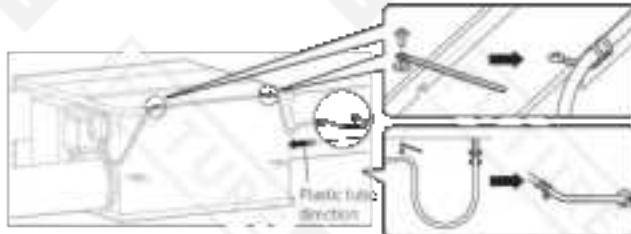

**CAUTION**

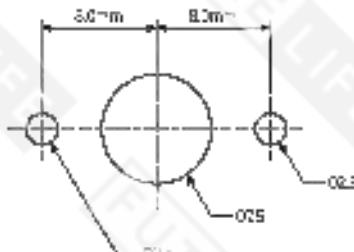

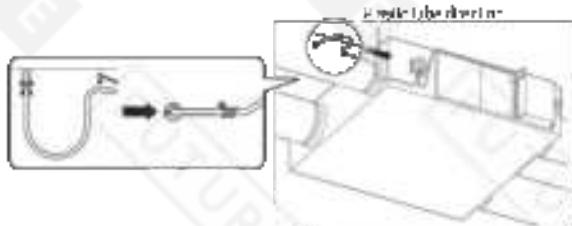

- In any case, be careful not to twist or press the PVC tube. Failure to do so may cause errors in pressure measurement, leading to product malfunction.
- If the direction of the plastic tube is not identical with the air-flow direction, errors may occur in pressure measurement, leading to product malfunction.

# Installing the Differential Pressure Switch

- Assemble the high pressure plastic tube(Pt) to the OA duct installed on-site, and then fix the high pressure PVC tube using the holder wire.
- Assemble the plastic tube so that its direction is identical with the air flow direction in the OA duct.
- Assemble the plastic tube at a position which is 300 mm away from the product.
  - Assemble the plastic tube to side of the OA duct.
- ▶ ANTR6\*\* - ANTR7\*\* - ANTR8\*\* - ANTR9\*\*
  - Assemble the holder wire to the inspection cover assembly screw on the top of the product, and then fix the PVC tube.
  - Assemble the plastic tube to the external OA duct, and then fix the PVC tube using the holder wire.

- ▶ ANTR6\*\* - ANTR7\*\* - ANTR8\*\* - ANTR9\*\*
  - Assemble the plastic tube to the external OA duct, and then fix the PVC tube using the holder wire.

## NOTE

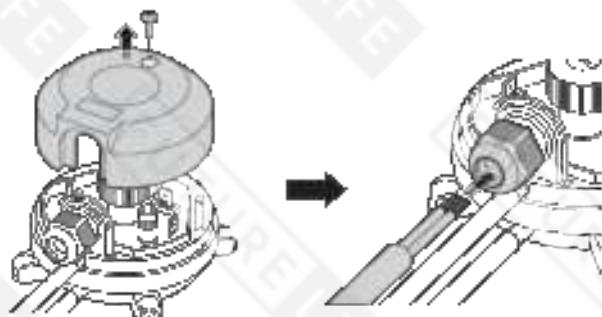

- To assemble the plastic tube to the OA duct, it is required to drill holes on the duct. For the hole sizes, refer to the figure.

## CAUTION

- In any case, be careful not to twist or press the PVC tube. Failure to do so may cause errors in pressure measurement, leading to product malfunction.
- If the direction of the plastic tube is not identical with the air flow direction, errors may occur in pressure measurement, leading to product malfunction.
- If the plastic tube is assembled below the OA duct, the installation can be achieved by drilling just one hole rather than assemble the plastic tube below the OA duct.

## Connecting the connecting wires between the differential pressure switch and the ERV PBA

- 1 Untighten the screw (1 FA) of the differential pressure switch, disassemble the cover and then pass the cable through the screw type cable connector part.

- 2 Apply a crimp type ring connector to each connecting wire located at the body side of the differential pressure switch, and then connect to pin-terminal connector, as shown in the figure.
  - The cable and the crimp type ring connector do not come with the product and must be purchased on site.

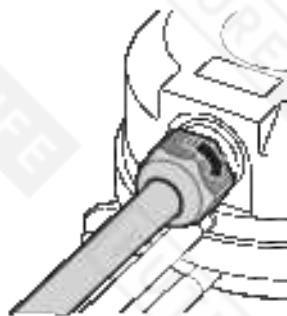

- 3 Connect the connecting wires to the pin-terminals No. 2 and No. 3 located on both sides to the differential pressure switch dial, and then connect the opposite ends of the connecting wires to the HTRD terminals on the ERV PBA.

# Installing the Differential Pressure Switch

- 4 Rotate the screw type connection part clockwise to seal the opening appropriately in accordance with the thickness of the connecting wire.

## CAUTION

- Be sure to switch off the power supply before installation! Failure to do so may cause electrical problems, leading to abnormal operation of the product.
- The wiring must be installed in compliance with the applicable wiring regulations.
- If the diameter of the connecting wire is smaller than 3mm, the sealing of the screw type cable connection part may not be complete.

## Setting using the differential pressure switch

- 1 Rotate the dial located at the center of the differential pressure switch, until the number pointed by the yellow arrow becomes equal to the differential pressure setting value of the product.  
(Refer to the following table for the setting values by model.)

Model	Differential pressure setting
AN026,54 KN/F..	720
AN035,54 KN/E..	300
AN050,540 KN/FH	750
AN080,541 KN/EU	200
AN100,54 KN/F..	370

### NOTE

- When rotating the dial to set the differential pressure, be sure to rotate it in the direction that the number increases from the minimum value to the setting value. If you rotate the dial in the direction that the number decreases to the setting value, errors may occur in differential pressure measurement.

### WARNING

- 1 Be sure to set the differential pressure while the product is turned off. It is not turned off, electric shock may occur, a logo, or contact with the peripheral parts.
- 2 Close the cover of the differential pressure switch, and then tighten the screw.
- 3 Set SGD17 of the installation option 1 (02 model of the product to '1' (The AN0xxS1 KN / EU models ship with being set to the factory default).
