Philips Lamp Drivers & Lighting Controls

Philips electronic & electromagnetic solutions -
designed for faster and easier installation

PHILIPS

The world's favourite lamp drivers

For more than 30 years, Philips has been offering specialists worldwide highly reliable lamp drivers. We are the only manufacturer that covers all geographies around the world, making our products the world's most-sold drivers. In the Philips driver range, you will find unmatched compatibility with all standards-compliant lamps, and state-of-the-art service and warranty in every category. Across all of the world's continents, lighting specialists prefer Philips' drivers as the dependable foundation for their successful lighting solutions. Philips electronic drivers are your best choice when searching for long-term performance and reliable specifications.

Looking for the best gear to fit your lamp? Visit www.philips.com/gearselectiontool, use our Gear Selection Tool and discover which gear fits which lamp.

Introduction

The majority of lamps need additional lamp drivers for proper operation. These components have a large impact on the lamp performance. It can add functionality (e.g. dimming), increase comfort (e.g. elimination of lamp flickering) or reduce costs (energy savings, increase of lamp life).

Today, we all know that our energy consumption comes at a price. Commercial, institutional and industrial buildings account for about half of total energy consumption; up to 35% of the electricity used in an office building, for example, is spent on lighting. Lighting controls are key to creating lighting solutions that make the maximum difference in terms of cutting energy usage.

Increase efficiency by switching from magnetic to electronic drivers. Philips offers a wide and reliable portfolio of energy efficient solutions for indoor and outdoor applications. Implementing electronic technology will bring you substantial benefits like energy savings, lamp life extension (up to 30%), better handling of voltage fluctuations and constant light output over a wide voltage range. Moreover, electronic drivers offer fast, flicker-free ignition of the lamps. The result? No end-of-life flickering, avoidance of stroboscopic effects and reduced eye strain.

Electronic fixed output drivers for fluorescent lighting

Electronic fluorescent drivers from Philips offer an exceptional level of performance with high product quality and reliability. The wide range of Philips solutions covers all applications with T5, T8 and compact fluorescent lamps*. Philips ballasts have been designed to ensure high energy efficiency and optimised to be compatible with lamps from all major lamp manufacturers. Philips electronic fluorescent ballasts are in compliance with all relevant international safety and performance standards.

Product families

HF-Performer Intelligent for MASTER TL5, TL5 ECO, TL5c, TL-D, PL-L

Philips is the pioneer in slim, lightweight high frequency HF intelligent electronic ballast. HF-Performer Intelligent allows TL5 HE and HO lamps of the same length to be exchanged for maximum flexibility in luminaires design and handling. With smart power functionality based on Philips EII technology, HF-Performer Intelligent optimises system efficiency in combination with MASTER TL5 and TL5 Eco lamps. This driver is the most efficient and flexible solution for all your fluorescent lamps!

Benefits and features

- Intelligent lamp recognition: operating different TL5 (HE/HO) with the same length lamp types enabling optimization of logistics
- 100,000 hours lifetime at Ta=50 °C
- Programmed, flicker-free, pre-heated start (< 1.0 s)
- Active power factor correction to ensure constant light, irrespective of mains-voltage fluctuations
- Unlimited on/off switches on one lamp for applications where frequent on/off switching is anticipated (i.e usage of presence detectors devices)
- Suitable for emergency lighting
- Extremely low losses system - fulfils Celma classification EEI A2 BAT

HF-Performer III for MASTER TL5, TL5 ECO, TL-D, PL-L PL-T/C/R

HF-Performer III is a sustainable, slim and high frequency electronic ballast. It provides an efficient, flexible solution for MASTER TL5, TL5 Eco, TL-D, PL-L and PL-T/C/R applications. Ideal for applications where high energy efficiency is required, it's also suitable for venues where lighting creates a comfortable environment and places where a stable, precise and flicker-free light is needed.

Benefits and features

- Multi-wattage lamp operation
- 100,000 hours lifetime at Ta=50 °C
- Programmed, flicker-free, pre-heated start (< 0.5 s)
- Active power factor correction to ensure constant light, irrespective of mains-voltage fluctuations
- Unlimited on/off switches on one lamp for use in applications where high switching frequency is anticipated (i.e usage of presence detectors devices)
- Suitable for emergency lighting
- Extremely low losses system – fulfill Celma classification EEI A2 BAT

* for full lamp/ballast combinations please visit the annexes of this brochure or visit www.philips.com/ballastselector

HF-Selectalume II for MASTER TL5, T5c TL-D, PL-T/C

HF-Selectalume II is the most cost-effective, reliable, slim and affordable fluorescent solution, with highly disruptive technology for energy saving, system flexibility and unsurpassed performance. The cost-saving HF-Selectalume II has a robust design which meets all relevant international safety and performance standards. The HF- S II strain relief is optimized for PL-T/C lamps. HF-Selectalume II is intended for use with indoor lighting fixtures such as spotlights, down lights and, recessed luminaires, which are largely used in office, retail, industry, hotel, restaurant and other applications where control devices are installed with high on/off switching activity.

Benefits and features

- Over 70,000 hours lifetime at $T_a=50^\circ\text{C}$ and over 50,000 on/off switches on one lamp
- Warm start with filament pre-heating ($< 1.6\text{ s}$)
- Active power factor correction to ensure constant light, irrespective of mains-voltage fluctuations
- Optimised for applications where frequent on/off switching is anticipated (more than 50,000 on/off switches on one lamp)(i.e usage of presence detectors devices)
- Suitable for emergency lighting
- Low losses system - fulfils Celma classification EEI A2

* compared to magnetic drivers

The product table on pages 24-27 gives you a complete overview of the features of each product.

Electronic fixed output drivers for fluorescent lighting

Product families

HF-Essential for TL5 & TLD

HF-Essential is the most cost-effective, slim and affordable ballast to reliably operate a fluorescent lamp. It is also the ideal entry-level product for EM system users who want to enjoy the benefits offered by electronic ballasts. The product has an energy efficiency class A2. HF-Essential for applications such as indoor lighting fixtures.

up to
30%*
energy
saving

MULTI-WATTAGE
simply change
the integrated
switch in case
of lamp upgrade

Benefits and features

- Robust design for 45,000 hours lifetime at $T_a=50^\circ\text{C}$
- Igniter and capacitor not required; and flicker-free and noiseless
- Automatic restart (after voltage dip or lamp replacement)
- DC emergency operation and EMC compliant to EN 55015 2006 + A1 2007

HF-Matchbox Red for MASTER TL, PL-T/C/S/PL-L/TL5c

HF-Matchbox Red is affordable, reliable, compact, lightweight and high-frequency ballast for system wattages application below 25W in combination with TL mini, TL-D, TL5 and TL5c, PL-T/C, PL-L/S lamps. The HF-M Red range has a robust design and meets all relevant international safety and performance standards and with an energy efficient index (CELMA EEI) = A2.

up to
30%*
energy
saving

Benefits and features

- Multi-lamp ballast: drives all single lamps of different types and wattages (system wattage below 25 W)
- Optimised for applications where frequent on/off switching is anticipated
- Warm start with less than 0.8 sec ignition time
- Up to 40,000 hours at T_a max for improved reliability, reduced maintenance and replacement costs
- Ideal solution for systems using movement/presence controls
- Over 50,000 on/off switches on one lamp (depending on lamp/ballast combination)
- Automatic restart (after voltage dip or lamp exchange)
- Suitable for use in class I or class II luminaires

HF-Matchbox Blue for MASTER TL, PL-T/C/S/PL-L/TL5c

The HF-Matchbox Blue is affordable, reliable, compact, lightweight and high-frequency ballast for system wattages application below 25 W in combination with TL mini, TL-D, TL5 and TL5c, PL-T/C, PL-L/S lamps. The HF-M Red range has a robust design and meets all relevant international safety and performance standards and with an energy efficient index (CELMA EEI) = A2.

up to
30%*
energy
saving

Benefits and features

- Multi-lamp ballast: drives all single lamps of different types and wattages (system wattage below 25 W)
- Economical solution for applications with long burning hours and infrequent on/off switching
- 40,000 hours at T_c max for improved reliability, reduced maintenance and replacement costs
- Over 8,000 on/off switches on one lamp (depending on lamp/ballast combination)
- Cold start
- Automatic restart (after voltage dip or lamp exchange)
- Suitable for use in class I or class II luminaires

* compared to magnetic drivers

The product table on pages 24-27 gives you a complete overview of the features of each product.

Electronic dimmable drivers for fluorescent lighting

The Philips HF-Regulator family is the perfect portfolio of lighting solutions for wherever fluorescent lamps are used. Whether it's energy saving or scene setting, the HF-Regulator can set the required light levels via the 1-10V, Touch and DIM or DALI protocol. The HF-Regulator family is suitable for a wide range of applications and operates seamlessly with simple, stand-alone controls, networked solutions and entire building management systems.

Product families

HF-Regulator Intelligent TD

Touch and DALI for MASTER TL5, T5c, TL-D, PL-T, PL-C, PL-L

Intelligent high-frequency electronic dimming ballast, using DALI (IEC62386) or Touch and Dim push-button protocol for fluorescent lamps. Pre-empting upcoming legislation meeting A1BAT requirements. Special commands retrieve the system's mains power consumption or show which lamp wattages are connected. Ideal for indoor, general and task lighting applications in combination with lighting control systems (personal, daylight linking and/or movement detection).

Benefits and features

- HF-R Intelligent recognises which lamp is connected and operates accordingly
- Suitable for both lighting control systems based on DALI protocol and dimming using a push-to-make switch
- Programmed start: flicker-free ignition (< 1.0 s), striation-free operation, no stroboscopic effects
- Smart power for constant light, independent of mains fluctuations and dimming, from 1 to 100%*
- Stop circuit activated within 5 seconds of lamp failure (safety stop). Ballast resets automatically after lamp replacement

Intelligent features:

- Corridor mode***
- DC emergency DIM level
- Lamp burn-in time

HF-Regulator II TD

Touch and DALI for MASTER PL-T, PL-C and PL-R

High-frequency electronic dimming ballasts, using DALI or Touch and Dim push-button protocol for (compact) fluorescent lamps. Ideal for indoor, general and task lighting applications in combination with lighting control systems (personal, daylight linking and/or movement detection).

Benefits and features

- Programmed start: flicker-free ignition (0.5 s), striation-free operation, no stroboscopic effects
- Suitable for both lighting control systems based on DALI protocol and dimming using a push-to-make switch
- Smart power for constant light, independent of mains fluctuations and dimming, from 1 to 100%*
- Stop circuit activated within 5 seconds of lamp failure (safety stop). Ballast resets automatically after lamp replacement
- Protected against excessive mains voltages, incorrect connections and incorrect lamp use

HF-Regulator II 1-10V

1-10V for MASTER TL5, TL-D, PL-T, PL-C and PL-L

High-frequency electronic dimming ballast using 1-10V protocol for (compact) fluorescent lamps. Suitable for emergency lighting systems; Ideal for indoor, general and task lighting applications in combination with lighting control systems (personal, daylight linking and/or movement detection).

Benefits and features

- Programmed start: flicker-free ignition (< 0.5 s), striation-free operation, no stroboscopic effects
- Smart power for constant light, independent of mains fluctuations and dimming, from 1 to 100% (1-10V Standard)**
- Uses up to 60% less energy with automatic lighting control systems
- Stop circuit activated within 5 seconds of lamp failure (safety stop). Ballast resets automatically after lamp replacement

* For compact: 3-100% dimming

** PL-T/C: 3-100% dimming

*** For exact configurations per lamp driver, please check table on page 26-27.

The product table on pages 24-27 gives you a complete overview of the features of each product.

Electronic drivers for HID indoor lighting

The new Philips range of smart electronic drivers for HID lamps is tuned for optimal light performance. Compact and lightweight, they are designed for fast and easy installation to reduce disruptions and save on installation costs. What is more, with a long, energy efficient lifespan they are light on maintenance too. As the leading name in HID Electronic drivers, our pioneering solutions are created by constant innovation, a comprehensive portfolio and the highest quality performance. So you can expect intelligent control and attractive savings all around your store.

Product families AspiriVision

AspiriVision

Triple Wattage

One driver for 35 W, 50 W or 70 W

The mark of excellence in HID electronic drivers technology. Intelligent - enabling optimisation of logistics - easy to use and simple to install.

CDM Elite Light
Boost lamps

Features

* Compared to magnetic drivers

Kindly note that not all models in each category have Soft Start & Loop Through feature.

Loop Through

Electronic drivers with Loop Through have an extra mains connector. You can connect mains input from one driver to the next without the need for a splitter, making installation quick and easy with lower costs. This feature is only available in independent (I/I) version.

Soft Start

Soft Start limits the inrush-current of the driver, allowing more drivers to run a single MCB, thus drastically reducing installation costs. Fast and easy one-to-one replacements with electro-magnetic drivers are possible to significantly reduce installation costs.

Plug-and-Power

Our Plug-and-Power range of drivers provide an easy to use solution that eliminates wrong wiring and increases speed of installation. The range includes drivers which are either pre-installed with cables and connectors or are equipped with connectors on the driver for easy plug-and-power usage.

Voltage Drop Detection

Significant drops in voltage of more than 5 milliseconds cause drivers to switch off. This clever feature can detect whether this is due to a drop in mains voltage or end of lamp life, continuing to reignite the lamp where appropriate to ensure uninterrupted operation.

Product families PrimaVision

PrimaVision

Compact

20 W, 35 W, 50 W, 70 W

High quality, compact size drivers for optimal and reliable performance of CDM lamps.

Standard (I/S)

Independent (I/I)

PCB (I/P)

Connector (I/C)

Features

PrimaVision

Mini

20 W, 35 W, 50 W

Miniature size drivers that free up the boundaries of creativity and innovation in luminaire design.

Standard (I/S)

Independent (I/I)

PCB (I/P)

Features

PrimaVision

Power

100 W, 150 W

Higher power drivers, small size. Designed for optimal performance with CDM lamps, ideal where high light intensity is key.

Standard (I/S)

Independent (I/I)

Features

PrimaVision

Twin

35 W, 70 W

Dual lamp operation, single driver. Improves cost effectiveness and increases luminaire design flexibility.

Standard (I/S)

Independent (I/I)

PCB (I/P)

Features

The product table on pages 28-29 gives you a complete overview of the features of each product.

Improved Thermal Performance

Improved temperature performance means drivers with this feature have a longer lifetime of up to 40,000 hours compared to standard drivers in similar conditions, making them suitable for use with temperature-critical luminaires.

DALI Interface

DALI is a communication protocol for lighting electronic devices. It allows the drivers to control light points off site, connect directly to light sensors and infrared controls, log information and, in some cases, allow dimming. A great feature for attraction lighting and energy saving.

Low Electromagnetic Interference (EMI)

Standard driver has a typical 6 dB under limit at its most critical point. With the Low Electromagnetic Interference feature, a typical under limit of 10 dB is possible, making it suitable for EMI-critical luminaires.

Please check the 'Product Display' tool on www.philips.com/eHID for graphic demonstration of each feature.

Electronic drivers for HID outdoor lighting

The Xtreme proposition was designed by Philips specifically for outdoor lighting. It ensures reliable, long life solutions which cater for the current need of saving costs on maintenance and energy. Maintenance accounts for the highest costs in the total cost of ownership for outdoor lighting. For this reason, the Xtreme portfolio offers 80,000 hours of lifetime, integrated lightning protection and reliability at high temperatures. We are committed to helping our customers produce fewer carbon emissions and save more energy. It is the reason why we offer a high number of integrated controls inside the drivers. With the option to use any combination of controls, depending on the constraints of their energy network, customers can save up to 50% energy compared to other more traditional solutions.

The complete package of features

LineSwitch

One of the simplest solutions to dim light: works by using a pilot line extra wire which is applied to the installation. It is a one-step-dimming solution integrated in all DynaVision DALI drivers. Enables users to dim (to a predefined level) groups of light points, with only one push of a button (with the condition of having the extra wire attached to the installation). It creates up to 25% energy saving.

DynaDimmer

The DynaDimmer functionality is a multi-step dimming solution offering up to 5 steps flexibility. It is up to users if they want to use all the five steps or less. The main function is to have reduced light levels at the hours of the night when it is not required to have the full lumen output. The dimming is automated by the driver. It creates up to 30% energy saving.

AmpDim

Xtreme drivers allow light control via variation of the mains input. Therefore light output is modified only by lowering or increasing the mains voltage. The function is similar to the mains dimming function in conventional drivers. It creates up to 35% energy saving.

Adjustable Light Output (ALO)

When the light level requirement for a particular solution falls in between the lumen packages delivered by standard lamp types, it is possible to customise the power level of the lamp with adjustable light output. The ALO feature can be programmed to the desired light level, creating a virtual lamp with a wattage in the range of 100% - 66% of the specified power. For example, ALO can transform the popular CosmoPolis 45 W lamp into a CosmoPolis 30 W. This feature prevents unnecessary light pollution and can achieve a significant reduction in energy use (up to 40%) for conventional lamps.

Thermal Guard

To protect the driver from overheating but prevent lamp extinguishing, in case the temperature exceeds $T_{case} + 10$ degrees, the lamps will be dimmed to the minimum level. The result will be that temperature in the luminaire will be lowered and power-losses will be reduced.

LumiStep

Based on the preference (6/8 hour of dimming) and the intelligence from inside, the driver knows at what hour to start dimming the light to 60% output and when to bring it back to 100%. It creates up to 20% energy saving.

Xtreme

To withstand the harsh outdoor conditions from across the globe, Philips developed the Xtreme specification. Xtreme stands for 80,000 hours lifetime lightning protection (5 kA /10 kV), - 30 °C/ + 50 °C ambient temperature.

Constant Light Output (CLO)

All light sources experience lumen depreciation over time. To ensure the minimum required light levels in an installation, most lighting designs are calculated based on the light level at end of the lamp's useful life. This means that the system consumes more power than necessary, wasting as much as 15% of energy on average during its lifetime. With the constant light output functionality, the driver can be programmed to start at a dimmed level for a new luminaire and gradually increase power over the life of the light source, saving energy and extending the lifetime of the system.

Product families

Xtreme electronic drivers for HID outdoor lamps are available in both fixed (PrimaVision) and dimmable (DynaVision LumiStep/AmpDim/Prog) versions.

Electromagnetic drivers for HID outdoor lighting

To answer the need for lower-cost electromagnetic systems in HID lighting, Philips has introduced a new electromagnetic driver and digital ignitor, the MK4. As a semi-parallel system it not only gives you a lower unit cost, it also creates significant energy savings throughout its lifetime. New ignitors are designed to work with a much wider variety of lamps and trigger all lamp types from 35 to 600 W with just one ignitor type.

The MK4 is quick and easy to install thanks to its compact driver and miniaturised ignitor. It fits easily into existing luminaires, since it has the same positioning and fixing points as its predecessors. You can also use series ignitors - simply leave the driver's middle connector free. Once installed, the combination of long life and extreme reliability will substantially reduce maintenance costs – one of the biggest costs of ownership in outdoor lighting.

Main product families

MK4 Basic Semi-pararell

MK4 Reinforced

Heavy Duty Semi-pararell

MK4 Multiwattage

MK4 High Power Basic

High Power Heavy Duty
Semi-pararell

Basic SOX

Constant wattage BSX

Longer service life

The MK4-system is designed to work for at least 10 years of continuous operation. This extended life is thanks to the ignitor which is not self-heating and to the fact that MK4 ballast are 10°C cooler than the predecessors ($T_w=140\text{ °C}$ vs 130 °C before). Since the semi-parallel ignitor is completely unaffected by the lamp's end-of-life effect and the ballast is protected by a thermo switch, overall reliability and service life are further extended.

Lower installation and maintenance costs

The MK4 is quick and easy to install thanks to its compact ballast and miniaturised ignitor. The products easily fit into existing luminaires, since they have the same positioning points as their predecessors. Everything is quick and easy because the driver is compact and the ignitor is miniature. You can also use series ignitors; simply leave the driver's middle connector free. Once installed, the combination of long life and extreme reliability substantially reduces maintenance costs – one of the biggest costs of ownership in outdoor lighting.

Five-year guarantee

In the extremely rare event of failure, Philips offers a five year guarantee, which means that there is a replacement of the failed component at no extra cost. It's a guarantee that we can confidently offer since our rigorous pre-release testing combined with superb quality and fewer number of components ensure excellent reliability.

Semi-parallel Advantages

Reliability

- Ignitor is not self-heating
- Ballast generates high-energy ignition pulse that ignites lamps under all conditions
- Current does not flow through ignitor when lamp is operating therefore lifetime of digital semi-pararell ignitor can reach more than 10 years of operation.

Ease-of-use

- High-energy ignition pulse, enabling remote gearing (20-100 m allowed)
- Silent operation since no coil used
- Compatible with series ignitors

Cost

- Energy saving by lower losses of ignitor (~0.5 W)

Electromagnetic drivers for HID outdoor lighting

MK4 HID Heavy Duty BSN (50-400 W)

Semi-parallel system for CDM, CDO, MH, HPI (Plus), SON (no ignitor needed for SON-I lamps)

Long-lasting, reliable solution, IP 20 rated ballasts. Great performance in harsh and corrosive environments. Lifetime is enhanced thanks to the encapsulation, which gives extra protection against corona as well as improved durability.

Benefits and features

- Outstanding product life (10 – 15 years)
- Excellent resistance to chemical attack, humid conditions and high environmental stress crack resistance
- Separate earth terminal
- All ballasts are equipped with Thermo Switch protection against end-of-lamp-life phenomena
- Compact dimensions and light weight with minimal wattage losses, thanks to orthocyclic winding process
- Equipped with screw terminal blocks as standard
- Ballast can also be used in combination with a series (superimposed) ignitor
- Ballasts for alternative mains voltages/frequencies on request

HiD High Power Heavy Duty BHL/BHD/BMH/BSN (1000-2000 W)

Semi-parallel system for SON/MH/HPL/HPI

Long-lasting, reliable solution, IP 20 rated ballasts. Great performance in harsh and corrosive environments. Lifetime is enhanced thanks to the encapsulation, which gives extra protection against corona as well as improved durability.

Benefits and features

- Protected from overheating – outstanding product lifetime of 15 years on average
- Excellent resistance to chemical impact, humid conditions and environmental stress crack
- Minimal wattage losses thanks to orthocyclic winding process
- Ideal for pole mounting in humid environment
- Class I rated (i.e. with earthing facility)
- Equipped with screw terminal blocks as standard
- Separate earth terminal
- Ballasts for alternative mains voltages/frequencies available upon request

HID Basic BSN/BMH MK4 (35-600 W)

To answer the need for lower costs of electromagnetic systems in HID lighting, Philips has introduced a new electromagnetic ballast and digital ignitor, the MK4. As a semi-parallel system it not only gives you a lower unit cost, it also creates significant energy savings throughout its lifetime.

Benefits and features

- At least 10 years of continuous operation
- Can be used in wide range of luminaires and applications
- Easy fit in the luminaire
- High system reliability with guaranteed ignition under all circumstances

Ignitors

Ignitors ensure reliable and smooth starting behavior. They are equipped with screw terminal blocks or click-in. Ignitors can operate remotely at considerable distance from the lamp:

Road Lighting & City Beautification

- Pole height 4-12 m
- Distance from the lamp:
 - <2 m: use series ignitor SUD10 (50-70 W) SU38 or SUD40 (70-600 W)
 - <10-20 m: use semi parallel SKD578 ignitor (50-600 W)
 - <40 m: use SN61 ignitor (1000 W)

Sports Lighting

- Pole height: depends on the application
- Distance from the lamp:
 - <2 m: use series ignitor SU38 or SUD40 (70-400 W)
 - <10-20 m: use semi parallel SKD578 ignitor (50-400 W)
 - <1500 m: use parallel ignitor SI51 for HPI lamps

HID Ignitor for MK4 semi parallel systems

Electronic compact ignitors for flexible luminaire design

SK ignitor for SON/CDO/CDM is to be used in combination with BSN K ballast

SI ignitor for HPI is to be used with BHL 250 or BHL 400 ballasts

Benefits and features

- Wide range of lamps covered by one ignitor 35-600 W
- Works with semi-parallel ballasts
- Silent operation
- Can operate remotely at considerable distance from the lamp

HID Ignitor for series systems

Digital ignitors for maximum reliability

SU ignitor for SON/CDO/CDM E27/E40 lamps

Benefits and features

- Easy installation and wiring
- Can operate with both semi-parallel and series ballasts
- Ignitors equipped with screw terminal blocks as standard
- No ignitor needed for SON-I lamps

The product table on pages 36-39 gives you a complete overview of the features of each product.

Indoor lighting controls

Buildings can account for 40% of the country's energy consumption, of which 30% of that is related to lighting. With concerns about the environmental impact of buildings on climate change, many organizations are committed to using more sustainable solutions. One of the primary benefits of lighting controls is their ability to reduce energy consumption – by as much as 55%! At the same time, they can improve the ambience of any indoor environment and the well-being of those within it. Lighting controls range from simple switches to advanced integrated systems of user interfaces, sensors, controllers, drivers and system software. Solutions that improve work light, appearance and energy efficiency of almost any building. 'Plug and play' or stand-alone lighting solutions that do not require network integration; Philips has developed an extensive controls proposal to help you choose the optimal, cost-effective and easy-to-use solution to cover your office needs.

Product families

The product table on pages 36-37 gives you a complete overview of the features of each product.

OccuSwitch

Simple to design-in and easy to install.

It uses movement detection to switch the light, giving you substantial savings.

up to
30%
energy
saving

Benefits and features

- Easy to install, enables fast installation by optional Wieland connectors. Delay times can be manually adjusted to suit personal requirements.
- The OccuSwitch sensor has a retractable shield that can be used to shield off areas, e.g. corridors.
- Smart timer will extend the delay time by 10 minutes if movement is detected shortly after switch-off.
- The LRM1080 can be parallel linked to cover large area's
- Energy savings of up to 30% and a good pay-back.

OccuSwitch Wireless

Simple controls solution which can be added to existing lighting installations. The sensors communicate wirelessly with the actuator block which switches the light. It switches the light off, when no movement is detected, this to save energy.

Benefits and features

- The battery fed sensors can be mounted in various places. The actuator is designed for any wiring system. The wireless connection to the sensor gives freedom where to mount, without need of new wiring, minimizing installation cost.
- Sensors and actuator blocks can easily be wirelessly linked to cover larger areas. Retractable shield that can be used to shield off certain areas, e.g. corridors.
- Overall an easy-to-apply solution, offering energy savings of up to 30% with low investment costs.

OccuSwitch DALI

A range of advance lighting control systems which offers maximum savings but do not jeopardize on lighting quality and the comfort needed in today's working environment. With specific modes the system can be optimized for its usage.

Benefits and features

- The system has 10 lighting modes for lighting optimization e.g. in an open plan, cell office, meeting room or classroom.
- Parallel linking for large area's LRM2080 or linking to a Building Management System LRM 2090 is possible.
- On the DALI bus 15 luminaires can be connected, dividable over 4 lighting groups. Two of these are 'window' and 'corridor' luminaire groups which give, in combination with an advanced algorithm, maximum savings with respect to occupancy control and daylight regulation.
- The sensor shows relative energy usage.

ActiLume 1-10 V

An easy to install system which does not need an advanced commissioning tool. The modular system is optimized for small application areas.

Benefits and features

- A daylight-regulation/movement-detection device which can easily be fitted in a 1-10 V luminaire.
- The system can manually be adjusted: a rotary control to set a delay time between 1 and 30 minutes; a rotating diaphragm to adjust the light level set point. There is push-button to activate the 100 hours burn-in mode for fluorescent lamps.
- When external on /off switching takes place it is also possible to offer a solution where the sensor is connected directly to the ballast. The system will dim when no movement is detected or if there is sufficient daylight.

ActiLume (Micro)LuxSense

A simple light sensor which offers energy saving when installed near windows and there is enough daylight.

Benefits and features

- A simple daylight regulation device which can easily be fitted in a 1-10 V luminaire. The ActiLume (Micro)LuxSense is simply connected to the 1-10V DC control input of the HF-R ballast.
- The system can be manually adjusted, by a rotating diaphragm, to adjust the light level set point. The sensitivity of the sensor can be changed within a range from 1/3 to 3 compared to the default setting.

Make the switch today

Green and Lighting

Lighting impacts on electricity bills, particularly if you're using outdated technologies. Lighting is one of the most attractive and easy ways to save money on your electricity bills. Not only does it consume 19% of all electricity in the world, replacing energy-inefficient lighting with green alternatives has an immediate impact on energy use, CO₂ emissions, the environment and at the same time improves light quality. Here are some interesting facts and figures.

Approximately two thirds of all lighting installed around the world is based on older, less energy efficient technology. There has been a revolution in lighting technology in the past 10 years, resulting in a complete portfolio of added value, energy-saving lighting solutions.

Energy efficient general lighting has the potential to achieve average energy savings of 40%.

Globally this would save:

- EUR 120 billion in energy costs
- 630 million tones of CO₂
- 1,800 million barrels of oil equivalent
- Or the annual output of 600 medium sized power stations at 2 TWh/yr.

Energy saving solutions

Our green solutions don't just save energy. They're kinder to the planet before, during and at the end of their lifecycle. All our green products reduce costs, energy consumption and CO₂ emissions. They offer a significant environmental improvement in one or more of our Green Focal Areas - Energy efficiency, Packaging, Hazardous substances, Weight, Recycling and disposal, and Lifetime reliability.

Green legislation

Environmental legislation on lighting is becoming increasingly stringent. From simple lamp replacements to complex renovations, we can help you comply. Strict legislation is redefining our lighting requirements. Understanding the requirements and making the right decisions will have an impact on you legally, environmentally and financially. We're prepared for the change over with future-proof ways to help you comply.

EUP, EPBD and WEEE Directives

EuP Directive: The Energy using Product Directive will phase out energy inefficient lamps, luminaires and gear in the near future. Beat the deadline with our planet- friendly alternatives. **EPBD Directive:** The Energy Performance Building Directive aims to improve the energy performance of buildings. Energy efficient lighting can help you gain a high classification level that will increase the value of the building in a cost effective way. **WEEE Directive:** The legislation aims to move away from less efficient ballasts – a great opportunity to switch to our electronic ballasts and benefit from longer lamp life. The Ballast Directive will be completely replaced by the EuP Directive on Tertiary lighting.

RoHS and EN 12464-1

RoHS: The RoHS Directive restricts the use of certain hazardous substances. Our products meet, and in many cases exceed, these new industry standards. **EN 12464-1:** Lighting must ensure that people in the workplace are safe and able to perform their tasks. Our energy efficient solutions will help you meet, or even exceed, the lighting requirements for visual comfort, safety and performance.

Ballast and EEL Directives

Ballast Directive: The legislation aims to move away from less efficient ballasts – a great opportunity to switch to our electronic ballasts and benefit from longer lamp life. The Ballast Directive will be completely replaced by the EuP Directive on Tertiary lighting. **EEL Directive:** The Energy Efficiency Label is designed to make it easier to choose more energy-efficient products. The highest class also means higher quality standards. EEL helps to avoid the cost of poor quality products.

Make the switch

Philips Lighting has been leading the way in encouraging the world to adopt energy efficient lighting. We began our campaign to raise awareness of the potential savings of today's advanced lighting solutions just over five years ago. But despite rising energy prices, the climate change challenge, the security of energy supply and economic growth, switching to new lighting technologies is still too slow, especially in times of economic crisis. Take advantage of this revolution in lighting technology and start making the switch today.
