Company profile

Trenz Electronic GmbH

- Located in Germany
- Established 1992 as a sole proprietorship
- 2002 converted to GmbH
- now with 90+ employees
- ISO 9001 certified SMD in-house production

Trenz Electronic Production

- 25 years of development with in-house production
- 50,000+ modules per year; 500,000 lifetime
- 500+ customizable modules
- Rugged design with long term supply guarantee
- Industrial temperatures

Trenz Electronic Services

- Integration of FPGA and SoC modules
- Electronic Design Service
- Electronic Manufacturing Service
- Rapid prototyping
- All modules are developed & manufactured in Germany

AMD Versal™ AI Edge device

New!

4 x 5.6 cm

Device list	Pin packages	Connectors	SDRAM max	Flash	eMMC	EEPROM	Ethernet	USB	Other features
Versal™ AI Edge VE2002, VE2102, VE2202, VE2302, VM1102	A784	54-pins XPIO, up to 22-pins HDIO, 2 x Samtec ADM B2B	2 x 4 GB LPDDR4	256 MB OSPI	max. 64 GB	2 Kbit with MAC-Address	1 Gbit PHY	USB2.0 PHY	Clocks for PS, PHYs, DDR4, PL, up to 8 GTPY transceiver, UART, I2C, SDIO

AMD Zynq™ UltraScale+™ RFSoc, DDR4, Flash, Ethernet

New!

6.4 x 8 cm

Device list	Connectors	SDRAM max	Flash	eMMC	Ethernet	USB	Other features
ZU29DR, ZU39DR, ZU49DR	5 x Samtec ADM6 4 x 60-pin	8 GB DDR4 64-bit (PS) with ECC 8 GB DDR4 64-bit (PL)	2 x 64 MB	8 GB	2 x 1Gbit	USB2.0	OPTIGA Trust M, Crypto Authentication, oscillator, RF-ADC, RF-DAC

Device list	Connectors	SDRAM	Flash	EEPROM	Ethernet PHY	I/Os	Gbit transceiver	Other features
ZU2, ZU3, ZU4, ZU5	2 x Samtec ADM6 (4 x 60 pins), 1 x Samtec UMPT	8 GB DDR4 with ECC	2 x 64 MB	64 kByte, 2 x with MAC address	2 x 1Gbit	136 PL HP + 88 PL HD 57 PS MIO	4 x GTR + 4 x GTH	Real time clock, oscillator

Device list	Connectors	SDRAM max	Flash	eMMC	Ethernet PHY	USB PHY	Total I/Os	Other features
ZU4, ZU5, ZU7, CG, EG, EV	2 x Samtec ADM6	8 GB DDR4 64-bit (PS) with ECC 4 GB DDR4 32-bit (PL)	512 MB	8–64 GB	2 x 1 Gbit	USB2.0 OTG	48 PL HD + 52 PL HP 14 MIOs + I2C	Transceiver clock in-/outputs, 2x MAC address serial EEPROM, single 5-12V power required

TEI0181 Agilex™ 5 Integr. USB-Programmer

Altera® Agilex™ 5E FPGA, Arduino MKR Standard, CRUVI HS

Wiki

Device list	Programmer	Flash	HyperRAM	Total I/Os	Clock	Other features
A5E 008B, 013B, 028B	Integrated, USB to JTAG/Serial	32 MB	16 MB	Arduino MKR - 22, CRUVI - 32	25 MHz MEMS	2 x RGB LED, User LED, 2 x Dip Switch, Push button, 3-axis accelerometer

TEI0050 "CYC5000" Cyclone® V Module

Altera® Cyclone® V, SDRAM, Flash, EEPROM

Wiki

Form factor

2.5 x 7.07 cm

Device list	Pin packages	Connectors	SDRAM	Flash	Other features
Cyclone® V E, A2, A4	U15 UBGA 324 pins	CRUVI HS, 2 x 14 pin header	8 MB	up to 256 MB possible	USB-to-JTAG/GPIO-FTDI, user push buttons and LEDs

TEI0185 Agilex™ 5E Development Board

Altera® Agilex™ 5E, LPDDR4 SDRAM, Flash, Ethernet, USB, HDMI

New!

Device

- Altera® Agilex™ A5ED065BB32AE4SR0

On Board

- 2x Ethernet PHY
- HDMI Transmitter
- USB-to-UART FTDI
- 8 channel ADC/DAC
- PLL clock
- Oscillator
- 2x EEPROM with MAC address
- 128 Kbit EEPROM
- 2x Temperature sensor
- Fan Speed-controller
- 4x RGB LED
- 2x User LED
- 4x User push button
- 4x DIP switch

Interface

- PCIe x4 (B2B)
- TEI0004 connector (B2B)
- FMC+ (B2B)
- CRUVI (2x HS, 2x LS)
- 2x Gigabit ETH
- HDMI
- 4x USB connector
- 2x zSFP+ connector
- SD Card connector
- 3x I2C connector (2x DCDC, 1 x MISC)
- Fan connector

Power

- 12 V Power supply

Dimension

- 16x25 cm

TE0710 Artix™ 7 4 x 5 cm Module

AMD Artix™ 7, DDR3, Flash, 2 x 100 Mbit Ethernet, EEPROM

AMD
ARTIX™ 7

Wiki

Form factor

4 x 5 cm

Device list	Connectors	SDRAM max	Flash	Ethernet PHY	Total I/Os	Other features
35T, 50T, 75T, 100T	2 x Samtec LSHM	512 MB DDR3	32 MB	2 x 100 Mbit	112 (51 differential pairs + 10 single-ended)	JTAG, 100 MHz MEMS oscillator, user LED, single supply

4 x 5 cm

Device list	Connectors	SDRAM max	Flash	EEPROM	Ethernet PHY	Total I/O	Gbit transceivers	Other features
75T, 100T, 200T (with restrictions: 15T, 35T, 50T)	3 x Samtec LSHM	1 GB DDR3	32 MB	MAC Address	100 Mbit	158	4 x GTP	Programmable clock generator, single supply

TE0713 Artix™ 7 4 x 5 cm Module

AMD Artix™ 7, DDR3L, Flash, USB3.0 to FIFO Bridge, 4 x GTP Transceiver

AMD
ARTIX™ 7

Form factor

4 x 5 cm

Device list	Connectors	SDRAM max	Flash	USB PHY	Total I/Os	Gbit transceivers	Other features
75T, 100T, 200T (with restrictions: 15T, 35T, 50T)	3 x Samtec LSHM	1 GB DDR3L	32 MB	USB3.0	152	4 x GTP	Programmable clock generator, single supply

AMD Zynq™ 7000, DDR3, Flash, Ethernet, USB, 4 High Speed Serial Transceivers

Device list	Connectors	SDRAM max	Flash	Ethernet PHY	USB PHY	Total I/Os	Gbit transceivers	Other features
Z-7015, Z-7030, Z-7012S	3 x Samtec LSHM	1 GB DDR3	32 MB	1 Gbit	USB2.0	132 + 14 MIO	Z-7015: 4 x GTP Z-7030: 4 x GTX	Programmable clock generator, real time clock, single supply

AMD Zynq™ 7000, DDR3, Flash, Ethernet, USB, eMMC

Device list	Connectors	SDRAM max	Flash	eMMC	Ethernet PHY	USB PHY	Total I/Os	Other features
Z-7020, Z-7014S, XA7Z020-1CLG484Q	3 x Samtec LSHM	1 GB DDR3	64 MB	max. 32 GB	1 Gbit	USB2.0	152 + 14 MIO	Real time clock, MAC address, 2k serial EEPROM, 3 user LEDs, single supply

TE0741 Kintex™ 7 4x5 cm Module

AMD Kintex™ 7, Flash, 8 High Speed Serial Transceivers, 25 MHz Oscillator

Form factor
4 x 5 cm

Device list	Connectors	Flash	Total I/Os	Gbit transceivers	Other features
70T, 160T, 325T, 410T	3 x Samtec LSHM	32 MB	144 (94 for 70T variant)	8 x MGTs	Programmable clock generator, single supply

TE0841 Kintex™ UltraScale™ 4x5 cm Module

AMD Kintex™ UltraScale™, DDR4, Flash, 8 x GTH Transceiver

Form factor
4 x 5 cm

Device list	Connectors	SDRAM max	Flash	Total I/Os	Gbit transceivers	Other features
KU035, KU040	3 x Samtec LSHM	2 GB DDR4	64 MB	60 x HR I/Os 84 x HP I/Os	8 x GTH	Programmable clock generator, single supply

AMD Zynq™ UltraScale+™, DDR4, Flash, USB, Ethernet, eMMC

4 x 5 cm

Device list	Pin packages	Connectors	SDRAM max	Flash	eMMC	Ethernet PHY	USB PHY	Total I/Os	Gbit transceivers	Other features
ZU1CG -ZU5CG, ZU1EG -ZU5EG, ZU4EV, ZU5EV	784	3 x Samtec LSHM	4 GB DDR4	128 MB	8 – 64 GB	1 Gbit	USB2.0 OTG	132 + 14 MIO	4 x PS GTR	GPU/VCU depending on device, programmable clock generator, single supply

AMD Zynq™ UltraScale+™, DDR4, Flash, USB, Ethernet, eMMC

4 x 5 cm

Device list	Pin packages	Connectors	SDRAM max	Flash	eMMC	Ethernet PHY	USB PHY	Total I/Os	Gbit transceivers	Other features
ZU1CG-ZU5CG, ZU1EG-ZU5EG, ZU4EV, ZU5EV	784	3 x Samtec LSHM	4 GB DDR4	128 MB	8 – 64 GB	1 Gbit	USB2.0 OTG	34 x HP 96 x HD 14 x MIO	4 x PS GTR	GPU/VCU depending on device, programmable clock generator, single supply

AMD Zynq™ UltraScale+™ Low Power FPGA, LPDDR4, Flash, USB, Ethernet

4 x 5 cm

Device list	Pin packages	Connectors	SDRAM max	Flash	eMMC	Ethernet PHY	USB PHY	Total I/Os	Gbit transceivers	Other features
ZU1CG - ZU5CG, ZU1EG - ZU5EG, ZU4EV, ZU5EV	784	3 x Samtec LSHM	2 GB DDR4	128 MB	8 – 64 GB	1 Gbit	USB2.0 OTG	132 HP + 14 MIO	4 x PS GTR	GPU/VCU depending on device, programmable clock generator, single supply

AMD Zynq™ UltraScale+™ MPSoC, DDR4, Flash, Ethernet, USB

4 x 5.6 cm

Device list	Connectors	SDRAM max	Flash	eMMC	Ethernet	USB	Total I/Os	Gbit transceivers	Other features
ZU1CG - ZU5CG, ZU1EG - ZU5EG, ZU4EV, ZU5EV	2 x Samtec ADM6 4 x 60-pin	8 GB DDR4 64-bit with ECC	128 MB	8 – 64 GB	1 Gbit	USB2.0 OTG	204	4 x PS GTR 4 x PL GTH (ZU4 + ZU5 only)	optional HyperRAM, MAC address serial EEPROM with EUI-48 node identity, security controller, Crypto Authentication

AMD Zynq™ UltraScale+™, DDR4, 8 High Speed Serial Transceivers

Compatible with
TEBFO808/818

Form factor

5.2 x 7.6 cm

Device list	Pin packages	Connectors	SDRAM max	Flash	Total I/Os	Gbit transceivers	Other features
ZU1CG - ZU5CG, ZU1EG - ZU5EG, ZU4EV, ZU5EV	C784	4 x Samtec ST5 (TE0803) 4 x Samtec ADM6 (TE0813)	8 GB DDR4	2 x 64 MB	204 + 65 MIO	4 x PS GTR 4 x PL GTH (ZU4 + ZU5 only)	GPU/VCU depending on device, EEPROM MAC address, programmable clock generator, single supply

AMD Zynq™ UltraScale+™, DDR4, Flash, 20 High Speed Serial Transceivers

Compatible with
TEBFO808/818

Form factor

5.2 x 7.6 cm

Device list	Pin packages	Connectors	SDRAM max	Flash	Total I/Os	Gbit transceivers	Other features
ZU4CG - ZU7CG, ZU4EG - ZU7EG, ZU4EV - ZU7EV	B900	4 x Samtec ST5 (TE0807) 4 x Samtec ADM6 (TE0817)	8 GB DDR4	2 x 64 MB	204 + 65 MIO	4 x GTR 16 x GTH	GPU and VCU, programmable clock generator, single supply

TE0808 / TE0818 Zynq™ UltraScale+™ MPSoC Module

AMD Zynq™ UltraScale+™, DDR4, Flash, 20 High Speed Serial Transceivers

Compatible with
TEBFO808/818

Form factor

5.2 x 7.6 cm

Device list	Pin packages	Connectors	SDRAM max	Flash	Total I/Os	Gbit transceivers	Other features
ZU6CG, ZU9CG, ZU6EG, ZU9EG, ZU15EG	C900	4 x Samtec ST5 (TE0808) 4 x Samtec ADM6 (TE0818)	8 GB DDR4	128 MB	204 + 65 MIO	4 x GTR 16 x GTH	GPU/VCU depending on device, programmable clock generator, single supply

TE0726 "ZynqBerry" SoC Module

AMD Zynq™ 7000, DDR3L, Flash, Ethernet, USB, HDMI

Raspberry Pi
compatible

Form factor

6.35 x 9.3 cm

Device list	Connectors	SDRAM max	Flash	Ethernet PHY	USB PHY	Total I/Os	Other features
Z-7010, Z-7007S	40-pin "HAT" headers	512 MB DDR3L ECC	16 MB	100 Mbit	4 x USB2.0 host	26	DSI display connector, CSI-2 camera connector, micro SD card slot, 3.5 mm audio plug, HDMI type A

AMD Zynq™ 7000, DDR3L, Flash, Ethernet, EEPROM, CAN

Device list	Connectors	SDRAM max	Flash	EEPROM	Ethernet PHY	Total I/Os	Other features
Z-7010, Z-7020	1 x Samtec ST5	1 GB DDR3L	64 MB	MAC Address	1 Gbit	PL: 80 PS: 20	CAN, single supply, 3 x LED (1 x PS, 2 x PL)

Evaluation Board with AMD Versal™ AI Edge

Device list	Pin packages	Connectors	SDRAM max	Flash	eMMC	Ethernet	USB	Other features
Versal™ AI Edge VE2302	A784	zQSFP, 2 x CRUVI HS, 2 x CRUVI LS, CSI-2, FMC	8 GB DDR4	2x 64 MB QSPI	32 GB	1 Gbit RJ45	USB2.0 JTAG + UART	Artix™7 FPGA as configurable levelshifter, EEPROM with MAC-Adress, 3 x clock (1 x PL, 2 x GTs), 2 LEDs, push button, dip switches, reset button

AMD Zynq™ 7000, Form Factor like Arduino Shield, DDR3L, Flash, USB OTG

SDRAM
max

128 MB

Ethernet
PHY

1 x Gbit

Total I/Os

40 x I/O 20
LVDS + 32 MIO

Gbit transceivers

8x GTY
4x GTR

Other features

- USB2.0 OTG,
- MAC EEPROM,
- RF-ADCs, RF-DACs

TEF0008 FMC Card

FMC Card with four SFP+ 10 Gbit Ports based on VITA 57.1 FMC HPC Standard

Wiki

Form factor

6.9 x 8.4 cm

It is intended for use on a FMC HPC carrier and cannot be used stand-alone.

Connectors	Dimensions	SFP+	Other features
HPC FMC	69 x 84 mm, SFP+ connector excluded (+ 5.5 mm)	4 SFP+ 10 Gbit ports for fiber optical SFP modules	Low-jitter programmable clock generator, 3.3V to 1.8V DCDC converter, 128 Kbit EEPROM, status LED (green)

TE0802 MPSoC Development Board

AMD
ZYNQ
UltraScale+

Wiki

Form factor

10 x 10 cm

Device list	SDRAM max	Flash	Ethernet RJ45	USB	User I/O	Audio	Other features
ZU1CG ZU2CG	2 GB LPDDR4	32 MB	1 Gbit	USB3.0 Host (type A connector)	2 Pmod connectors	3.5 mm jack (PWM output)	EEPROM, USB JTAG/UART microUSB, microSD card, M2 PCIe SSD support, display, power: 5V plug

TE0890 "S7 Mini" Fully Open-Source Module

AMD Spartan™ 7, Fully Open-Source Module with HyperRAM

Form factor
2.7 x 5.2 cm

Device list	Footprint compatible	Config PROM	HyperRAM DRAM	Total I/Os	Interfaces	Supply	Other features
7S25	7S6, 7S15, 7S50 FTGB-196 devices	64 MB	64 MB	Dual-Pinout DIP-40 or 50mil 80 pin for 32 or 64 FPGA 3.3V I/Os	Standard 1 x 6 FTDI cable serial	5V input	23K Logic Cells, 29K Flops, 45 36Kb BRAMs, 80 Mults, fully open source

TE0714 Artix™ 7 FPGA Module

AMD Artix™ 7, Flash, 4 x GTP Transceiver, Form Factor 3 x 4 cm only

Form factor
3 x 4 cm

Device list	Pin packages	Connectors	Flash	Total I/Os	Gbit transceivers	Config. Voltage (B14)	Other features
A12, A15, A25, A35, A50	CSG325	2 x Samtec LSHM	16 MB	138 + 5 (QSPI or user I/Os)	4 x GTP	3.3V or 1.8V	Differential MEMS oscillator for MGT clocking, XADC analog Input, eFUSE bit-stream encryption (AES), single supply

AMD Zynq™ 7000, Raspberry Pi Zero Form Factor, DDR3L, Flash, USB, HDMI

The diagram illustrates the Xilinx Zynq SoC architecture. At the center is the **Xilinx Zynq** block, which contains **Processing Logic** and **FPGA** regions. Various external components are connected to this central block:

- Micro USB** is connected to the **USB 2.0 PHY**, which in turn connects to the **Processing Logic**.
- An **Oscillator** provides input to the **USB 2.0 PHY**.
- Another **Oscillator** provides input directly to the **Processing Logic**.
- The **Processing Logic** is connected to several external storage and interface components:
 - 512 MByte DDR3L SDRAM** via a **16 Bit** bus.
 - 16 MByte QSPI Flash**.
 - micro SD Card Slot**.
 - HDMI Mini Type C**.
 - CSI-2 Connector**.
- The **FPGA** region is connected to:
 - FTDI USB to JTAG/UART** via **UART** and **JTAG** interfaces.
 - HAT Header** via a **26x GPIO** interface.
- A **Micro USB** is also connected to the **FTDI USB to JTAG/UART** block.

TE0725 Artix™ 7 FPGA Module

AMD Artix™ 7, Flash, HyperRAM, 2 x 50-pin Headers, 2.54 mm pitch

The diagram illustrates the Xilinx Artix-7 FPGA and its connections to three external components: J1, J2, and JB1.

- Xilinx Artix-7 FPGA:** The central component, shown as a green rounded rectangle. It contains internal blocks for Bank 14, Bank 0, Bank 15, Bank 35, Bank 34, Bank 16, and Bank 0.
- J1 (Left):** A blue vertical rectangle representing a connector.
 - 100.000000 MHz Oscillator (yellow box) is connected to Bank 14 via CLK_SYS.
 - HyperRAM (dashed yellow box) is connected to Bank 15.
 - 42 x IOs, 21 x LVDS pairs (black text) is connected to Bank 35.
 - Green LED D2 (yellow box) is connected to Bank 14 via SYSLED.
- J2 (Right):** A blue vertical rectangle representing a connector.
 - Quad SPI Flash (yellow box) is connected to Bank 14 via SPI_SCK.
 - Serial EEPROM (yellow box) is connected to Bank 14 via I²C.
 - 42 x IOs, 21 x LVDS pairs (black text) is connected to Bank 34.
 - POF Transceiver (dashed yellow box) is connected to Bank 16.
 - Red LED D3 (yellow box) is connected to Bank 0 via DONE.
- JB1 (Bottom):** A blue horizontal rectangle representing a connector.
 - JTAG is connected to Bank 0.
 - XMOD is connected to Bank 14.
 - UART is connected to Bank 14.

Development Boards

DesignWare® ARC® EM Software Development Platform

The DesignWare® ARC® EM Software Development Platform is a flexible platform for rapid software development on ARC EM processors and subsystems. It is intended to accelerate software development and debug of ARC EM processor-based systems for a wide range of ultra-low power embedded applications such as IoT, sensor fusion, and voice applications. It includes an FPGA-based hardware board with commonly used peripherals and interfaces for extensibility. Downloadable platform packages containing different hardware configurations enable the board to be programmed with different ARC EM processors and subsystems. The packages also contain the necessary software configuration information for the tool-chain and embARC Open Software Platform.

The development platform is supported by Synopsys' MetaWare Development Tool Kit, which includes a compiler, debugger and libraries optimized for maximum performance with minimal code size. The embARC Open Software Platform (OSP), available online from embarc.org, gives developers online access to device drivers, FreeRTOS, middleware and examples that enables them to quickly start software development for their ARC-based embedded systems.

Each hardware configuration includes an ARC EM processor and subsystem with access to 16 MB of PSRAM, 16 MB of SPI Flash and a wide range of peripherals such as Audio Line In/Out, UART, SPI, I2C, and ADC. A 9-D motion sensor enable fast development of IoT applications. Two digital MEMs micro-phones can also be used for the development of voice applications. The hardware is extensible using the popular Arduino® interface and extension is also possible with Digilent Pmod Interfaces, mikroBUS headers and a 50-pin header. Debug and trace are handled with USB/JTAG interfaces and a NEXUS interface for ARC Real-Time Trace (RTT). The board includes a micro-SD card slot for loading application software.

Key features:

- AMD Kintex™ 7 XC7K325T-2FBG676C
- 32 MByte Quad-SPI Flash memory (for configuration and operation)
- USB-JTAG bridge FT2232H
- FPGA configuration through JTAG and SPI Flash memory
- SPI Flash configuration through JTAG and USB
- Connectors
 - Arduino compatible pin headers
 - MicroBUS compatible pin headers
 - 3 x Pmod compatible pin headers
 - 50 pin header 2.54mm (40 single-ended IO, 20 differential lanes, variable VCCIO)
 - Mictor debug connector
 - 10 pin debug connector 2 mm
- 2 x 8 MByte PSRAM
- 32 MByte User Quad-SPI memory
- MicroSD card socket
- 3-axis gyroscope, 3-axis accelerometer, 3-axis magnetometer
- Stereo audio codec MAX9880A
- 2 x PDM microphones
- 2 x 3.5 mm RCA audio jacks (input/output)
- 100 MHz user clock oscillator SiT8008
- Status LEDs, power LED
- 12V power supply (seperately included in the scope of delivery)
- Dimensions: 72.5 x 137 mm
- Article number: TEC0089-02-D2C-1-D

TEB0911 UltraRack+ Board

AMD Zynq™ UltraScale+™, 6 FMC Slots, Gigabit Ethernet

The TEB0911 UltraRack+ board is integrating a AMD Zynq™ UltraScale+™ MPSoC with 2 x 64 MByte Flash memory for configuration and operation, DDR4-SDRAM SO-DIMM socket with 64-bit wide data bus, 22 MGT lanes and powerful switch-mode power supplies for all on-board voltages. The TEB0911 board exposes the pins of the Zynq™ MPSoC to accessible connectors and provides a whole range of on-board components to test and evaluate the Zynq™ UltraScale+™ MPSoC and for developing purposes. The board is capable to be fitted to an enclosure, whereby on the enclosure's rear and front panel, I/O's, LVDS-pairs and MGT lanes are accessible through 6 on-board FMC connectors and other standard high-speed interfaces, namely USB3, SFP+, SSD, GbE, etc.

Key features:

- AMD Zynq™ UltraScale+™ MPSoC
 - 1156 Pin Package
 - Assembly options: ZU6, ZU9, ZU15
- 64-bit DDR4 SODIMM (PS connected)
- M2 PCIe SSD (1-Lane)
- eMMC (bootable)
- 2x 64 MByte Dual QSPI Flash (bootable)
- System controller (LCMX02-7000HC)
 - Power sequencing
 - IO expander
- Configurable PLLs
 - GTH/GTP reference CLKs

- RJ45 ETH + Dual USB3 combo
- Dual Stack SFP+
- SD (bootable)
- Status LEDs

Back Panel

- 2 x FMC
 - 4/2 GTH
 - 12 ZynqMP PL IO per FMC
- 56 SC IO
- USB JTAG/UART ZynqMP
- USB JTAG/GPIO FMC
- CAN FD (DB9 connector)
- SMA (external CLK)
- 5-pin 24V power connector

Front Panel

- 4x FMC
 - GTH per FMC
 - 68 ZynqMP PL IIO per FMC
- DisplayPort (2-lanes)

Additional information

- 40.6x23.43 cm board size
- Other assembly options for cost or performance optimization plus high volume prices available on request.

What is CRUVI?

A short overview

The word CRUVI is a combination of the Estonian word "KRUVI" for screw and the letter "C", which refers to the half of the hexagonal screw head. The "K" has been replaced by a "C" to emphasize the reference to the screw head. All modules are mechanically fixed with M2 screws with a diameter of 2 mm.

The expansion bus interface is designed to create an open ecosystem of function modules for high-performance peripheral connectivity. Its main focus is on supporting FPGA and FPGA SoC devices from all major manufacturers.

cruvi.com

The picture shows FMC to CRUVI-HS, Pmod to CRUVI-LS, CRUVI host with LS and HS slot and CRUVI LS modules. CRUVI fills the space between Pmod and FMC card, it can be smaller and cheaper than SYZYGY.

Visit cruvi.com for more information

What is CRUVI?

A short overview

	FMC LPC	SYZGY	CRUVI HS	Pmod	CRUVI LS

TEB0707

CRUVI Carrier board with 3 CRUVI slots (3 x HS, 1 x LS)

This board accepts Trenz 4x5 SoM and converts into a CRUVI compatible host carrier board. Three CRUVI slots are provided with HS connector support. One slot supports also LS.

CR00140

Industrial Motor controller board with CRUVI connector

This board allows motor control applications with any CRUVI carrier that supports at least one HS slot. IO voltage range supported 1.2V to 3.3V. There are total 4 phases available for either one 3 phase or two 2 phase motors. Pin headers are available for rotation sensor connections. There is current measurement on two phases and DC link voltage.

CR00140 Control Development Kit

AMD Zynq™ 7000

Motor Control Development Kit:

A CRUVI motor driver module CR00140-02, a carrier board TEB0707 and a MPSoC (TE0820/AMD UltraScale+™) or SoC (TE0720/AMD Zynq™) module including a heat sink. Supplied with a universal plug-in power supply with four adapters, a DC motor including cable for CRUVI CR00140 and an 8 GB microSD card.

- CR00140-02-K0A with MPSoC TE0820
- CR00140-02-K1A with SoC TE0720

CRUVI Adapter

Small sizes mezzanine module standard providing option for high speed and ultra low cost modules.

CR00025 Pmod to CRUVI low speed Host Slot

On board

- Steel spacer
- M3-Hole
- Board-to-Board & Mezzanine connector

Power via CRUVI

CR00026 Signal breakout debug Adapter

On board

- CRUVI HS Host connector
- CRUVI HS Device connector
- 100 mil pin headers

Power via CRUVI

CR00200 HS Ethernet PHY Adapter

On board

- CRUVI HS connector
- ETH PHY and 25 MHz oscillator

Memory

- Serial EEPROM with EUI-48 Node Identity

Interface

- CRUVI and RJ45

Power via CRUVI

CR00202 HS Dual Ethernet PHY Adapter

On board

- CRUVI HS connector
- 2x ETH PHY and 25 MHz oscillator

Memory

- 2x Serial EEPROM with EUI-48 Node Identity

Interface

- CRUVI and 2x RJ45

Power via CRUVI

CR00240 HDMI Adapter

On board

- Serial EEPROM with EUI-48 Node Identity
- HDMI/DVI level shifter with active DDC Puffer (PTN3363BSMP)

Interface

- Samtec ST4-30-1.50-L-D-P-TR (Ultra-Fine Pitch Header 60 pins)
- HDMI connector

Power via CRUVI

CRUVI Adapter

Small sizes mezzanine module standard providing option for high speed and ultra low cost modules.

CR00045 AP Memory x8 / x16 Xccela PSRAM Board

On board

- AP Memory IoT RAM (OPI & HP):
256 Mbit x8/x16 1.8V 200 MHz DDR PSRAM
- Serial EEPROM with EUI-48 Node Identity

Interface

- 1.8V 200 MHz DDR x8/x16 Xccela PSRAM
- I2C

Power via CRUVI

CR00049 EMMC expansion Module

On board

- eMMC: 8 GB 1.8V/3.3V eMMC (SDINBDG4-8G-XI2)
- Serial EEPROM with EUI-48 Node Identity

Interface

- 1.8V/3.3V eMMC 5.1 with HS400
- I2C

Power via CRUVI

CR00091 Loopback Adapter

On board

- 25 MHz oscillator (REFCLK)
- EEPROM (SMB BUS)
- LED indicators for all three power rails and SMB_ALERT

Power via CRUVI

CR00101 FMC to CRUVI Adapter

On board

- 1 x FMC HPC connector and 2 x CRUVI HS connectors
- 4x Steel Spacer
- Altera® MAX®10 FPGA 8kLE and internal Flash
- 128 kbit I2C EEPROM and clock generator 100 MHz
- 2x LEDs (red, green), 4x DIP switch

Power via CRUVI

CR00300 Camera Adapter

Memory

- Serial EEPROM with EUI-48 Node Identity

Interface

- Samtec ST4-30-1.50-L-D-P-TR (Ultra-Fine Pitch Header 60 pins)
- ZIF FFC/FPC CSI-2 15 pol camera connector

Power via CRUVI

Trenz Electronic Carrier Boards

for 4 x 5 cm Trenz Electronic modules

The carrier boards are baseboards for 4x5 SoMs, which exposes the modules B2B-connector-pins to accessible connectors & provides a whole range of on-board components to test & evaluate Trenz Electronic 4x5 SoMs.

TE0701

- Overvoltage-, undervoltage- and reversed- supply-voltage-protection
- Barrel jack for 12V power supply
- Carrier Board System-Controller CPLD
- Mini CameraLink connector
- RJ45 Gigabit Ethernet MagJack
- FPGA Mezzanine Card (FMC-LPC) connector
- USB JTAG- and UART interface with Mini-USB connector
- HDMI transmitter with HDMI connector
- 8x user LEDs, 2x user push buttons, 2x DIP switch
- Pmod connectors, Micro SD card socket and Micro-USB interface

TE0703

- 2x VG96 cconnectors (mounting holes and solder pads)
- SDIO port expander with voltage-level translation
- MicroSD card socket
- 4x user LEDs, 1 x user-push button, 2x user configurable DIP switches
- Mini USB connector (USB JTAG and UART interface)
- RJ45 Gigabit Ethernet socket with 4 integrated LEDs
- USB host connector
- Barrel jack for 5V power supply input
- DCDC step-down converter for 3.3V power supply
- USB JTAG and UART interface

TE0705

TE0705 carrier board is a simplified version of the TE0701. It provides a cost-effective way to connect Trenz 4x5 modules and connect them to your own circuits. As little as possible has been changed in functionality except the functionality that was removed. Changes from TE0701:

- Pmod connectors changed to IDC headers
- HDMI removed
- CL connector removed
- USB connector position changed
- 5 pin header support added on both USB interfaces
- 12V DC power input connector changed to different type
- FMC connector removed and replaced by two dual row 100 mil pin headers

TE0706

- VG96 connector and 50-pin IDC male connector socket
- SDIO port expander with voltage-level translation
- MicroSD card socket and a USB type A connector
- 1 x user push button, user configurable DIP switch
- 2x RJ45 Gigabit Ethernet MagJack
- 1 x Ethernet PHY
- Barrel jack for 5V power supply input
- DCDC step-down converter for 3.3V power supply
- JTAG pins on 12-pin header
- 3x VCCIO selection jumper

TEB0707

TEB0707 is a carrier board for 4x5 Trenz Electronic modules. It provides three high speed and one low speed CRUVI extension connectors.

- Altera® Max®10 FPGA
- FTDI FT2223
- Gigabit RJ45 LAN socket
- MicroSD card socket, MicroUSB2.0 socket, USB A socket
- 6x user LEDs (3x green, 3x red)
- 5V input power supply

Trenz Electronic Carrier Boards

for modules with different form factors

Following carrier boards are baseboards for specific Trenz Electronic SoMs, which exposes the module's B2B-connector-pins to accessible connectors & provides a whole range of on-board components to test & evaluate Trenz Electronic SoMs.

TEBF0808/TEBF0818

- Mini-ITX form factor
- ATX power supply connector (12V only supply required)
- Optional 12V standard power plug
- USB3.0 with USB3.0 HUB
- FMC HPC slot (1.8V max VCCIO)
- MicroSD card (bootable) and eMMC (bootable)
- PCIe slot - one PCIe lane (16 lane connector)
- Fan connectors, PC enclosure, FMC fan
- Altera® front panel- and HDA audio-connector
- CAN FD transceiver (10 pin IDC connector)
- Displayport single lane
- 1 x SATA connector

- Dual SFP+
- Gigabit Ethernet RJ45
- 1 x Samtec FireFly (4GT lanes bidir.)
- 1 x Samtec FireFly connector for reverse loopback
- 20 pins ARM JTAG connector (PS JTAG0)
- Size: 170x170 mm

Designed for Trenz Electronic's
TE080x MPSoC series TE0803/0807/0808
TE081x MPSoC series TE0813/0817/0818

TEB0835/TEB0836

- 4 kb EEPROM
- programmable clock generators
- I2C switch IC
- 6x green user LEDs
- 16x RF transformation
- reset push button
- temperature sensor
- FT2232H FTDI
- SDIO port expander DIP switch for mode
- Pin headers and PCIe 6 connector
- MicroSD card socket
- MicroUSB2.0

- 21 x UMCC connectors
- 6x SMA connectors for clocks
- 2x Samtec Razor Beam SS5
- RJ45 LAN socket
- 2x UEC5 connectors
- 2x UCC8 connectors
- PCI x8 card
- 12V input supply

Designed for Trenz Electronic's
TE0835 RFSoc series and
TE0836 RFSoc series

TEB0187

- Trenz Electronic TEI0187 module socket
- 12V plug
- 2x Gigabit Ethernet RJ45 (1 x on board, 1 x on SoM)
- USB 3.1 (type C connector)
- USB JTAG + UART type C connector
- USB UART type C connector + PD function (12V)
- HDMI
- SSD M.2 PCIe x1 (Gen3/Gen4)
- LEDs, temperature sensor, dip switches
- MicroSD card (primary boot option), eMMC (secondary boot option)
- EEPROM with MAC-address

AMB0010

- Trenz Electronic AM0010 module socket
- 12V power supply
- 2x B2B connector (ADF6), clock buffer, oscillator
- 1x RJ45 LAN connector
- XMOD (JTAG + UART to USB)
- UART Header, I2C Header
- 4x user LED, 4x user dip switch
- MicroSD card socket, USB connector
- Loopbacks for GTHs, IOs, GPIOs

Trenz Electronic Starter Kits

Pre-assembled and ready-to-use

In general our Starter Kits contain a Trenz Electronic micromodule with a pre-assembled heat sink mounted on a Trenz Electronic baseboard. The TE08xx series modules are build in a black Core V1 Mini-ITX enclosure. All this provided with a fitting power supply including different adapters, a microSD card, a USB cable plus screws and bolts. Different module variants can be integrated on request.

Cooling Solutions

for Trenz Electronic Modules

The individual cooling solutions from Trenz Electronic are required for efficient and effective cooling of the modules and serve to ensure the long-term functional reliability of the systems. The product portfolio includes both active and passive cooling solutions.

Probably the smallest Single-Board Computer based on an AMD Zynq™ MPSoC.

Ultra-compact and low-power, the **VCS³** is a small Single-Board Computer with an AMD Zynq™ UltraScale+™ device with integrated ARM CPUs and FPGA fabric.

Measuring just 50mm x 30mm, this tiny workhorse can be placed almost anywhere, opening up the benefits of FPGAs to many more applications.

Features:

- AMD Zynq™ UltraScale+™
ZU2 or ZU3 in InFO Package
- Dual or Quad A53 ARM CPU
- Four FPC connectors, 22 way
CSI/DSI for Cameras/Displays
3.3V Out & 56x GPIO
- 1Gb, 2Gb or 4Gb of LP-DDR4
- 64Gbit of eMMC Flash
- Dual 1Gbit QSPI ROM
- 9-axis IMU
- 5Mbps CAN-BUS
- Fast GPIO & UART
- Supply Voltage: +5V ±5%
- Power Consumption: ~ 3 Watts
- USB-C for data connection and/or power supply
- Dimensions: 50mm x 30mm

The **VCS³** utilizes an AMD Zynq™ UltraScale+™ MPSoC coupled with high-speed LP-DDR4 memory to produce a highly compact Edge-AI platform. Together with four digital camera interfaces, a 9-axis IMU, and a CAN-Bus interface, this platform is ideally suited for autonomous machines, cameras or automation. Device booting can be from SPI ROMs or eMMC flash, with no bulky, fiddly or unreliable SD cards. Numerous onboard power rails are generated from a single external 5V supply, or via a USB3 Type-C interface.

VCS³ - Dev Kit

Available now

- **VCS³** module on a test bench
- AMD XCZU3EG-L2UBVA530E
- Lynsyn Lite power measurement card virtual JTAG cable, through USB
- ATX breakout card with female banana sockets
- **VCS³** holder and fan unit
- 9-way cable for expansion
- 5-way cable for CAN bus and UART-1
- Main power and UART-0 (main UART) cable
- PicoATX power supply
- 12V AC-DC PSU

Ndigo6G-12 – versatile pulse acquisition platform

The Ndigo6G-12 offers 6.4 Pps sample rate, 12 bits resolution and a greatly improved readout rate of 5.2 GB/s. It features four TDC channels that can be used on separate inputs to bring the total channel count up to eight.

Scan for more information

The Ndigo6G-12 is a hybrid ADC/TDC-solution for the acquisition of short pulses. It builds on the established platform of the Ndigo5G-10, but takes it to the next level in both, performance and flexibility. The Ndigo6G-12 is particularly well-suited for time-of-flight applications like LIDAR or TOF mass spectrometry. Pulse arrival times can be measured with an accuracy down to 5 ps in combination with information on pulse shape such as area or amplitude. Four channels at 1,6 Gps with 12 Bits resolution can be recorded independently or combined to two or one channel(s) with higher dynamic range or up to 6,4 Gps. The Ndigo6G-12 comprises, in addition, four TDC channels with a resolution of 13 ps.

Ndigo6G-12 – Data	
Optimized for	TOF applications
ADC channels	4
TDC channels	4
Gating channels	2
Connectors	10 x LEMO 00
Sample rate single channel	6400 Msps
Sample rate multi channel	1600 Msps
Resolution	12 bits
TDC double pulse resolution	typically 5 ns
TDC bin size	13 ps
Multihit	unlimited
Dead time between groups	none
TDC readout rate	30 MHits/s; 11.6 MHits/s
ADC readout rate	approx. 5200 MByte/s
Timestamp range	106 d
Common start / stop	yes / yes
Readout interface	PCIe3 x8
Time base	50 ppb on board or external 10 MHz clock
On-board calibration data storage	✓
Adjustable trigger windows	✓
Overlapping events possible	✓
Easy to use Windows C API	✓
In-system firmware update	✓
Linux support available	✓

Zero suppression

Detect pulses above a certain threshold and only acquire the relevant data to massively reduce the amount of data that needs to be transferred to the host PC.

Configurable DC offset

When acquiring unipolar pulses, shift the baseline to the edge of the ADC range to double your dynamic range.

Flexible utility functions

A multitude of useful details help you to create a highly integrated setup with a minimum of external components. Using the integrated TiGer timing pattern generator can provide digital pulse patterns to control your experiment or internal triggers.

Streaming architecture

The buffers of the Ndigo6G-12 are only limited by the size of your PC's main memory. Data is streamed at a rate of 6,0 GByte/s concurrently to data acquisition. There is no dead time and latency is minimized.

xHPTDC8 - 8-channel time-to-digital converter / time tagging device

With the xHPTDC8 time interval analyzer, you can easily set up custom trigger scenarios.

Do you want to integrate your measurement system into a standard PC? In that case, the PCIe version is the best choice.

The xHPTDC8-TBT can be connected to your PC using Thunderbolt cables, offering flexible use across various scientific applications.

Scan for more information

Don't restrict yourself to classic common-start configurations! The xHPTDC8 provides an infinite stream of timestamps - one for each input pulse. You may filter the stream in your own DAQ software - or make use of the trigger and grouping features provided by xHPTDC8. These units provide very high-precision measurements with almost no cycle-to-cycle jitter and you can expect an RMS error that is very close to the quantization error. Its linearity is practically perfect! The inputs accept a wide range of single-ended signaling standards including NIM, TTL, and CMOS.

The PCIe bus master accesses directly a buffer on the host PC that is fully controlled by the device, ensuring low CPU load at high data throughput. The timing generator allows you to create digital output pulse patterns on all connectors to control the timing of your experiment and the newly added 18-bit ADC can monitor an analog voltage in your system in sync with the data acquisition or controlled by an external trigger.

xHPTDC8-PCIE – Data	
Optimized for	flexibility + performance
TDC channels	8
Additional inputs	event triggered ADC
Connectors	10 x LEMO 00
Bin size	13 ps
Double pulse resolution	5 ns
Multihit	unlimited
Dead time between groups	none
Readout rate	30 MHits/s total; 11.6 MHits/s per channel
Timestamp range	unlimited
Number of boards that can be synced	6
Readout interface	PCIe x1 @ 200 MB/s (or connects to TBT)
Time base	10 ppb on board
Linux support available	yes

Trenz Electronic

Projects

Innovative, flexible, and technically adept – these are the cornerstones of our customer relationships. Our extensive project experience enables us to collaborate with other companies in developing innovative solutions and successfully bringing them to market.

Let's delve into some of our notable collaborations:

The most powerful 4K Camera (Off the shelf):

In close partnership with Freefly, we supply them with the processing hardware (an off the shelf product) for their Ember Camera. This powerful camera is specifically designed for aerial photography and drone flights. It stands out for its compact size, high image quality, and advanced stabilization technology. Inside the camera is the Trenz Electronic TE0808 module, which provides impressive images. The Ember Camera allows breathtaking aerial shots and is an essential tool for professional filmmakers and photographers.

"Freefly chose the Trenz TE0808 to help speed the design of our latest camera 'Ember'. Trenz delivers high quality parts with the connectivity and processing we need to enable cutting edge imaging systems" - Tabb Firchau (Freefly CEO)

Shift-Left solutions (Assembly variant / custom solution):

Trenz Electronic GmbH and MLE have established a close engineering collaboration, and a track record of "Shift-Left", namely, accelerating FPGA projects by integrating FPGA Full System Stacks with off-the-shelf FPGA System-on-Modules (SoMs) for Compute, Video, Storage and/or Network Acceleration. The "Shift-Left" solutions not only shorten time-to-market but also reduce the risks and costs. In the project of TEBF0807, we completed and validated within days the PoC of low-latency SD-WAN access on the SoM and Devkit's carrierboard with the Network Protocol Acceleration Platform Full System Stacks integrated. Then we quickly designed a custom carrierboard that contained only the I/Os required by the client for low-risk cost optimization. The design re-use method greatly reduces the development time, costs and risks to shift-left clients' projects.

RFSoc Chip-Down for LIDAR detection in an automotive surrounding:

TEC0203 represents a bespoke board, tailored for integration within the LIDAR system. Its primary function revolves around the digitization of analogue signals sourced from optical sensors, followed by the processing of resulting digital signals. At its core lies a AMD Zynq™ UltraScale+™ RFSoc, complemented by 4 x 512 MByte DDR4 SDRAM for robust memory capabilities. Additionally, the board is equipped with a dual 512 MByte Flash memory configuration, essential for both initialization and ongoing operations. The analog part of the module also includes additional analog-to-digital converters (ADCs) for processing low-frequency signals. Ensuring efficient power distribution, the board features potent switch-mode power supplies catering to all onboard voltages. A dedicated system controller housed on LCMXO3D enhances operational control and coordination. Furthermore, facilitating seamless connectivity and control, the board incorporates a PCIe, Ethernet, USB2.0.
