### 1 IMPORTANT REMARK

WARNING: SHOCK HAZARD - DO NOT OPEN AVIS: RISQUE DE CHOC ÉLECTRIQUE - NE PAS OUVRIR

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

**WARNING** (If applicable): The terminals marked with symbol of "—" may be of sufficient magnitude to constitute a risk of electric shock. The external wiring connected to the terminals requires installation by an instructed person or the use of ready-made leads or cords.

WARNING: To prevent fire or shock hazard, do not expose this equipment to rain or moisture.

**WARNING:** An apparatus with Class I construction shall be connected to a mains socket-outlet with a protective earthing connection.

### 7. IMPORTANT SAFETY INSTRUCTIONS

- 1. Read these instructions.
- 2. Keep these instructions.
- 3. Heed all warnings.
- 4. Follow all instructions.
- **5.** Do not use this apparatus near water.
- 6. Clean only with dry cloth.
- **7.** Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
- **8.** Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.

- 9. Do not defeat the safety purpose of the polarized or grounding type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
- **10.** Protect the power cord from being walked on or pinched particularly at the plugs, convenience receptacles, and at the point where they exit from the apparatus.
- **11.** Only use attachments/accessories specified by the manufacturer.
- **12.** Unplug the apparatus during lightening sorts or when unused for long periods of time.
- 13. Refer all servicing to qualified personnel. Servicing is required when the apparatus has been damaged in any way, such as power supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
- **14.** Disconnecting from mains: When switching off the POWER switch, all the functions and light indicators of the unit will be stopped, but fully disconnecting the device from mains is done by unplugging the power cable from the mains input socket. For this reason, it always shall remain easily accessible.
- **15.** Equipment is connected to a socket-outlet with earthing connection by means of a power cord.
- **16.** The marking information is located at the bottom of the unit.
- **17.** The apparatus shall not be exposed to dripping or splashing and that no objects filled with liquids, such as vases, shall be placed on apparatus.

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

**WARNING:** This product must not be discarded, under any circumstance, as unsorted urban waste. Take to the nearest electrical and electronic waste treatment centre.

**NEEC AUDIO BARCELONA, S.L.** accepts no liability for any damage that may be caused to people, animal or objects due to failure to comply with the warnings above.

### **3. IMPORTANT NOTE**

Thank you for choosing our Ecler CA120 Compact Amplifier!

It is **VERY IMPORTANT** to carefully read this manual and to fully understand its contents before any connection in order to maximize your use and get the best performance from this equipment.

To ensure optimal operation of this device, we strongly recommend that its maintenance be carried out by our authorised Technical Services.

Ecler CA120 comes with a 3-year warranty.

### **4** COMPLIANCE WITH INTERNATIONAL STANDARDS

The CA120 micro amplifier complies with the following international standards:

- EN55103-1 Electromagnetic Compatibility.
   Product family standard for audio, video, audio-visual and entertainment lighting control apparatus for professional use
   Part 1: Emission
- EN55103-2 Electromagnetic Compatibility.

  Product family standard for audio, video, audio-visual and entertainment lighting control apparatus for professional use

  Part 2: Immunity
- EN60065 Audio, video and similar electronic apparatus. Safety requirements
   Complying with the requirements of directives 73/23/EC and
   2004/108/EC

### 5. INTRODUCTION

The CA120 is a very small stereo amplifier with numerous remotely controlled functions (RS-232 serial port, infrared receiver, 0-10 VDC remote control port), and is ideal for integrating audiovisual applications with other devices: educational classes, meeting rooms and multimedia presentations, business premises, etc.

#### 5.1 Main characteristics

- $2 \times 60 \text{ W RMS} @ 4\Omega \text{ amplifier}$
- Universal external power supply
- AUTO STANDBY function: in the absence of an audio signal the unit automatically goes into STANDBY mode, minimising power consumption
- Lightweight, silent, high-performance amplifier (fan-free convection cooling)
- Suitable for stereo and parallel (mono)
- 1 switchable balanced mic / unbalanced line input, with high quality microphone preamplifier, *phantom* power supply, noise gate and "talkover" function or priority over the rest of input
- 2 stereo lines (not balanced)
- 2-band independent tone control (Bass, Treble) for the microphone / line 3 and line 1&2 input connection.
- Auxiliary output for liaison with other amplifiers or external audio devices
- Local control by digital rotary knob ("encoder")
- Remote control by infrared remote control
- Remote control by WpaVOL or WpaVOL-SR (0-10 VDC) wall panel
- RS-232 control port, compatible with EclerCOMM software (free) and control protocol CA-NET
- MUTE port to silence the entire unit by closing external contact

### **F. INSTALLATION**

WARNING: Non-compliance with the instructions or neglecting warnings may cause malfunction or even damage the unit:

- 1. Avoid turning on the device without the speakers connected to its outputs and without having previously set the volume/gain controls to minimum level.
- 2. Always use shielded cables to make connections between devices.
- **3.** In an amplifier, avoid placing the speaker output cables close to other signal cables (micro, line...). This may cause the system to oscillate, damaging the amplifier and speakers.

## 6.1. Location and assembly

The CA120 is suitable for installation on a wall or under a surface (table, shelf, cupboard, etc.), thanks to its design and layout of its connectors, controls and LED indicator lights.

### 6.2. Mains connection

The amplifier is powered by alternating current through its external power source: 100-240 VAC and 50-60 Hz.

This apparatus must be earthed through its mains cable (earth resistance, Rg = 30  $\Omega$ , or lower). The atmosphere should be as dry and dust free as possible. Do not expose the unit to rain or water splashes. Do not place liquid containers or incandescent objects like candles on top of the unit.

Should any work or connection / disconnection task be done, always disconnect the unit from the mains supply. There are no elements that can be manipulated by the user inside the amplifier.

To avoid buzzing, do not allow the power cable to intertwine with the shielded cables that transport the audio signal.

### 6.3. Audio input connections

The CA120 accepts two types of signals in its input channels:

 Microphone (MIC): has a balanced Euroblock or jack type connection, ready to accept a signal level between -20dBV y -50dBV, with adjustable sensitivity with the ADJ control

**NOTE**: the microphone input has a phantom power supply to power condenser microphones, activated by internal bridge (see section 11 CONFIGURATION DIAGRAM).

Line signals (LINE1, LINE2, LINE3): they have unbalanced minijack or double RCA type stereo connections. They are prepared for input of between -6dBV and 0dBV, with input sensitivity that can be adjusted by internal port (see section 11. CONFIGURATION DIAGRAM). You can connect signals from CD players, radio tuners, mixing consoles, media players, the audio outputs of PCs and tablets, etc. to these connections.

**NOTE**: Turntables CANNOT BE CONNECTED directly to this device because none of the inputs have an RIAA preamp.

The CA120 has the following operating modes according to the input sources selected as active:

- LINE1: only LINE1 input is sent to the mix bus to be amplified and delivered to the L and R OUT outputs
- LINE2: only LINE2 is sent to the mix bus to be amplified and delivered to the L and R OUT outputs
- LINE3/MIC: only microphone (MIC) / line (LINE3) input is sent to the mix bus to be amplified and delivered to the OUT L and R outputs
- LINE1 + LINE3/MIC: the LINE1 and LINE3/MIC inputs are mixed, amplified and delivered to the L and R OUT outputs. If the TALKOVER function is active, the LINE3/MIC signal attenuates to that of the LINE1 when it exceeds the activation threshold
- LINE2 + LINE3/MIC: the LINE2 and LINE3/MIC inputs are mixed, amplified and delivered to the L and R OUT outputs. If the TALKOVER function is active, the LINE3/MIC signal attenuates to that of the LINE2 when it exceeds the activation threshold

Select one of the 5 work modes in special selection mode with the rotating knob on the front (see section 7.2. Special active source selection mode and setting adjustments for details of the full procedure).

### 6.4. Audio output connections

The amplified output (OUT L and R) have Euroblock connectors.

The connection cable that connects the CA120 connectors and the speakers should be good quality, with a suitable cross section and as short as possible.

The outputs can operate in stereo mode or mono (same signal L+R and both channels). These are selected using the micro switches **STEREO-MONO** on the rear panel (<u>see section 9 DIAGRAM and LIST OF FUCNTIONS</u> for more information).

Remember that the minimum work impedance for the amplifiers in mono or stereo mode is  $4\Omega$ . For correct operation of the CA120, under no circumstances must you work with impedance lower than specified above.

Additionally, the CA120 has an unamplified auxiliary output (AUX OUT) which makes it possible to connect it to amplifiers or with other external devices. The auxiliary output AUX OUT has a line level signal (0dBV) which is an unamplified replica of the signal delivered to the terminals OUTPUT L y R.

### 6.5. Remote control options

REMOTE port: the RJ-45 REMOTE type connector allows the connection of a WpaVOL or WpaVOL-SR (control 0-10 VDC) wall control panel to adjust the general output volume and/or to select one of the five active work source modes (LINE1, LINE2, LINE3/MIC, LINE1 + LINE3/MIC, LINE2 + LINE3/MIC). The connection is made by a standard CAT5 cable between the WpaVOL or WpaVOL-SR wall panel and the REMOTE CA120 connector.

Because there is a CA120 Wpa type control as well as other types of control (front knob, infrared control and serial port control) the most recent adjustments by any of these methods will prevail. For example, if an active source is selected and/or a volume adjustment is made using the WpaVOL-Sr wall panel connected to the **REMOTE** port, and then these settings are adjusted using the front control, the adjustment made with the frontal control will prevail. In this case, when the wall panel position is adjusted again, the CA120 will change to the values indicated, and so on and so forth.

• MUTE port: The MUTE connector makes it possible to connect a power free contact to totally silence the CA120 if an external device works on it (example: a emergencies and centralised evacuation warning system).

RS-232 port: the serial communication port RS-232 allows remote management
of the CA120 from a computer through the EclerCOMM software or CA-NET
protocol from an external control system supporting this protocol. See the CA-NET
protocol manual for detailed information on the connection and syntax of the
commands supported. The connection has the following specifications:

Baud rate: 9600 (fixed, without auto negotiation)

Data bits: 8Parity: NoneStop bits: 1

o Flow control: None

WIRING RS-232 – DB9			
RS-232 CA120	DB9		
Tx	Pin 2 (RxD)		
Rx	Pin 3 (TxD)		
Gnd	Pin 5 (Signal Gnd)		

 Receiver IR: the built-in IR receiver gives general volume control of the CA120 and its MUTE ON / OFF function from the REVO-IR remote control included with the unit.

### 7. OPERATION AND USAGE

### 7.1. Start up and default mode

Start up the CA120 by connecting the equipment to an external power source to which the DC 24V connector of the CA120 has already been connected. The LED indicator ON/STBY immediately lights up on the front panel. We recommend you turn on all the devices in the following order: sound sources, mixer, equalisers, active filters and processors and, finally power amplifiers. Powering off should be done by following the exact reverse sequence. Following this order, the introduced noise due to turning on or switching off the devices will not affect those further on in the chain and will be inaudible.

The system defaults to volume adjustment mode. In this mode, the **VOL/MUTE** knob on the front panel acts on the general output volume of the CA120. This controller has a maximum of 64 steps between the unit's minimum and maximum volume. When turned, it will adjust the volume while the LED **LEVEL** light is flashing. When the controller is turned to the left or to the right, this flashes while the output volume increases or decreases. The light stops flashing when it reaches either end of the scale and it is no longer possible to increase or decrease the volume of the unit.

Quickly press the **VOL/MUTE** controller to activate/deactivate the mute function of the unit (MUTE ON/OFF). The **MUTE** LED lits when the mute function is activated.

If you adjust the volume using the infrared remote control, the LED **LEVEL** y **MUTE** visual indicators are exactly the same as those seen when adjusting these with the knobs on the front panel.

### 7.2. Special active source selection mode and setting adjustments

Use the knob on the front panel to access special modes for selecting active sources and adjusting levels and equalization (bass and treble). You can access these modes by holding in the knob for a certain time and then turning it. By adjusting the level of each source you can mix the signal from the microphone or line (LINE3/MIC) and another line (LINE1 or LINE2), and the result of this mix will be controlled by the general output volume of the unit together, in other words, respecting the relative levels set of each source.

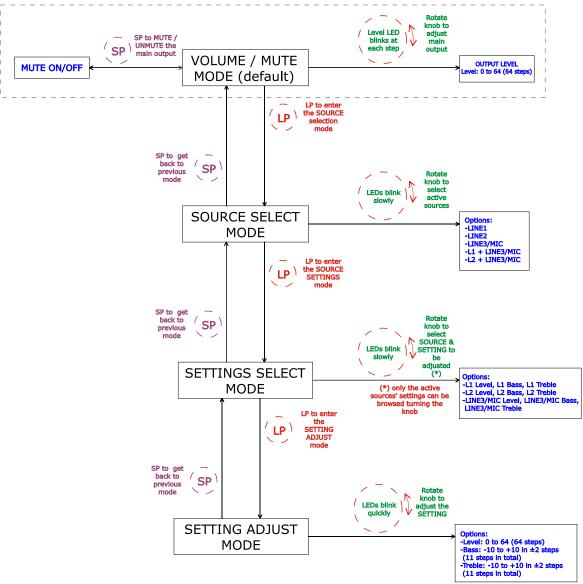

The full procedure for accessing and operating in these special modes and the options available in each are set out in the following graph:

# CA120 adjustments with front knob browser

SP: Short Press (press the VOL/MUTE knob briefly, less than 0,5 seconds)

LP: Long Press (press & hold the VOL/MUTE knob for more than 2,5 seconds)

# **Notes:**

- 1. If the device is in special mode for 10 seconds and the front knob is not touched, the equipment automatically reverts to VOL/MUTE mode.
- 2. In tone control mode, when you turn the knob in either direction it flashes fast while the gain of the affected tone increases. When either end of the scale is reached (-10  $\acute{o}$  +10dB) or when it goes through the centre point (0dB) it flashes more slowly.

### 7.3. AUTO STANDBY Function

The **AUTO STANDBY** function (idle or low consumption mode) means you can install the CA120 in inaccessible places and leave the device connected to the mains power supply permanently because when no signal is detected, it automatically goes into standby mode, saving energy.

To enable **AUTO STANDBY** use the micro switch with the same name on the rear panel of the unit (see section 9. DIAGRAM and LIST OF FUNCTIONS). When activated, if there is no audio signal in any of the inputs (or the signal is very weak, below the activation threshold), the CA120 automatically goes into STANDBY mode, and the **ON/STBY** on the front panel of the device goes orange. When a valid audio signal is detected in any of the inputs, the CA120 leaves standby mode and starts operating normally again and the **ON/STBY** LED goes green.

When you enable **AUTO STANDBY** mode with the micro switch (position **ON**) one of two things happens:

- There is NO audio signal in the inputs. Result: the amplifier immediately goes into AUTO STANDBY mode
- o There is an audio signal in the inputs. Result: the amplifier stays active

When the amplifier goes into **AUTO STANDBY** mode, all the LED indicators go out with the exception of **ON/STBY**. If the amplifier is in STANDBY mode and you turn the **VOL/MUTE** knob to adjust the volume or activate the MUTE function, the LED lights will come on for a short time then go out again. Remember that the first acting on the VOL/MUTE knob, this will only reset the LED indicators, and will not change any of the settings.

When the unit is a special mode (source selection or setting adjustment) the LED indicators will not go out even if the amplifier is in **AUTO STANDBY** mode.

### 7.4. LED indicators

- **SP**: The signal presence or **SP** LED indicator shows that there is a signal in the amplifier input. This light up when the input level reaches the established detection threshold.
- **CLIP**: The saturation or **CLIP** LED indicator comes on when the signal delivered to the speakers is close to the amplifier's clipping or saturation level. Input signals should be set to ensure the **CLIP** (saturation or cut off) indicators never stay on, but that they do so at most to the beat of the lowest sound frequencies. Otherwise the amplified signal will be distorted with low quality and low intelligibility.

**Note:** If the input signal is too high, the CLIP indicator lighting up very frequently over a short time interval (a few seconds), the amplifier may go into protection mode, being muted to return to normal operation in a short time

- MUTE: This light up when the MUTE function is active (silent mode)
- ON/STBY: the green light comes on when the equipment is in normal operating mode and it goes orange when it is in standby or low consumption mode (STANDBY).
- **LEVEL:** This flashes when you adjust the general level of the device. It also lights up during special adjustment modes, input levels (see section 7.2. Special active source selection mode and setting adjustments)
- BASS: This light up during special adjustment modes bass frequencies (see section 7.2. Special active source selection mode and setting adjustments)
- **TREBLE**: This light up during special adjustment modes, treble frequencies (see section 7.2. Special active source selection mode and setting adjustments)
- LINE1, LINE2, LINE3/MIC: These light up during special modes, selection of active sources and adjustments (see section 7.2. Special active source selection mode and setting adjustments)

### 7.5. Micro switches on the rear panel

- **REMOTE**: Turn on (ON) the remote control from the WpaVOL or WpaVOL-SR wall panel connected to the REMOTE port.
- NOISE GATE: Turn on (ON) or turn off the noise gate function for the LINE3/MIC input. When this function is active the microphone input is muted whilst there is no signal above the function activation threshold, so the equipment rejects background noise captured by the microphone connected to it.
- TALKOVER: On or off according to the priority of the LINE3/MIC input over the line inputs (LINE1 or LINE2). When the TALKOVER function is on, the LINE3/MIC signal will attenuate the selected line (LINE 1 or 2) when the activation threshold set is reached.
- AUTO STANDBY: Switch the AUTO STANDBY function on (ON) or off. When the
  function is on, the CA120 will automatically go into STANDBY or low consumption
  mode in the absence of audio signals in its inputs.
- STEREO / MONO (ST/MONO): Select the work mode of the amplified outputs of the unit:
  - o ST: Work in stereo mode L / R
  - o MONO: Work in MONO mode, both channels amplifying the L+R signal.

### 7.6. Lock mode

To switch the CA120 lock mode on or off hold in the VOL/MUTE control for 10 seconds from the VOL/MUTE mode. The LED SETTING indicators will flash 3 times to indicate that lock mode is now on. When in lock mode the device cannot be managed using the VOL/MUTE control (it will flash three times to show that it is in that mode when you turn the knob). This will protect the equipment from unwanted handling until it is restored to normal operation after holding the VOL/MUTE control in for a further 10 seconds (the LED SETTING indicators will flash twice to show that the lock mode is off).

**Note:** once lock mode is activated it will stay activated even when the equipment is turned off and on again. It will stay in lock mode until the VOL/MUTE control is held in for 10 seconds again.

### 7.7. Restore default settings and update firmware

If you would like to restore the CA120 to factory settings, follow this procedure:

- 1. Unplug the equipment then press and hold the knob in.
- 2. Plug back the unit without releasing the knob. The MUTE LED indicator will flash.
- 3. Wait a few seconds and then switch the CA120 off again.
- **4.** The next time you turn it on, the factory settings will be in the memory.

**Note:** for instructions on how to update the unit's firmware, see the product web page at <a href="www.ecler.com">www.ecler.com</a>, where you will find the update software utility and instructions on how to proceed.

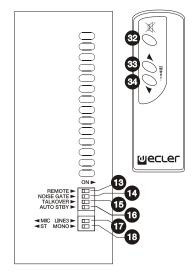

### **2 CLEANING**

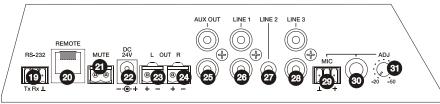

The CA120 must not be cleaned with solvents or abrasive substances which may damage the prints. Clean using a cloth moistened in water and a neutral liquid detergent, then dry with a clean cloth. Under no circumstances allow water to enter any of the orifices in the equipment.

### 13 CA-NET RS-232 Remote Control Protocol

The built-in RS-232 port in the rear panel of the CA and DAM series devices allows for an external device communication via a serial connection. This kind of connection uses a syntax which is very similar to the one used in the Ecler TP-NET protocol: it lets a client device get from and/or set the values of several parameters of a CA device (for instance, the CA120) like volumes, mutes, equalisation tones, etc.

The RS-232 serial communication must fulfil the following specifications:

Baud rate: 9600 (fixed, no auto-negotiation)

Data bits: 8

Parity: None

Stop bits: 1

Flow control: None

It's not allowed to have more than one simultaneous access from several clients to the same CA120 device using the RS-232 connection.

The protocol is simple and direct, syntax-friendly, making it easy to read, write and modify the generated code. It is based on messages with no begin delimiter: each message is self-delimited by the RS-232 packet size, which is defined with a maximum of **80 ASCII** characters, and always including the character LF (0x0A) at the end of each message. All the messages must be written in CAPITAL LETTERS.

To let some control systems (like EXTRON®, CRESTRON®, AMX®, RTI®, VITY®, MEDIALON®, etc.) process the messages more easily, the CA120 device adds the character **LF** (0x0A) at the end of each message it sends. This way the client of the CA120 device can buffer the received messages to process them, when required. The CA120 device can also handle several messages received in a single RS-232 packet by using the **LF** delimiter.

The available messages are built with one or more fields separated with blank spaces ( = blank space):

```
<TYPE> [PARAM1] [PARAM2] [PARAM3] [PARAM4][LF]
```

The first field (TYPE) defines the **message type** and then, the required parameters for it (each kind of message requires a given number of parameters). The field **TYPE** can have these values:

- GET
- SET
- DATA
- ERROR

At the end of this document you'll find a table including all the available messages and their parameters for each model of CA-NET compatible device.

The **GET & SET** messages can be sent from the client (control system) to the CA120 device. The **DATA** & **ERROR** messages can just be sent from the CA120 device to the client.

The **SET** messages coming from a client device don't have an automatic acknowledgement with a **DATA** message sent from the CA120 device after it has processed the **SET** command. The client must update the values itself, sending the needed **GET** message to ask for a parameter's value when it requires confirmation from the device. On the other hand, when a local control in the CA120 unit occurs (for instance, using the front panel controls or an infrared remote control), the CA120 device will automatically send the associated **DATA** command via its RS-232 interface, to keep synchronisation with the client device.

# **NOTES for CA-120:**

- A couple of special parameters for the GET and SET commands would require a detailed explanation:
  - AUTOLOAD\_PRESET1: its value (ON/OFF) defines whether preset number 1
    must be recalled or not each time the CA device is powered ON, defining this
    way the default working mode at startup
  - PANEL\_LOCKED: its value (ON/OFF) defines whether the front panel controls (the rotary encoder) is enabled (PANEL\_LOCKED=OFF) or disabled (PANEL\_LOCKED=ON) for local management of the device. (see the CA120 user manual for further details)
- The numerical values are always integer numbers without comma or dot symbols
- <Input Name> are text strings (without blank spaces) that identify an audio input
  of a CA device:
  - For the CA120, there are 5 possible Input Names:
    - o LINE1
    - o LINE2
    - o MICL3
    - LINE1 AND MICL3
    - LINE2 AND MICL3
- **Preset Number>** is a numerical value that identifies one available Preset stored in the device's memory. It can be within the [1..5] range.
- **<Volume Level>** are numerical values in the [0...64] range that define values in a scale equivalent to [-inf...Maximum\_Volume] in 1.25 dB steps.

- **Tone Level>** are numerical values in the [-10...10] range that define values in a scale equivalent to [-10, -8, -6, -4, -2, 0, 2, 4, 6, 8, 10] dB. If the numerical value is not in this list, the unit will reply with an error message.
- <Increment Value> are numerical values in the [0...64] range that define a value in a scale equivalent to [Increment Value]x(1.25) dB, used to increase or decrease the current absolute value of a level.
- **Threshold Level>** the allowed numerical values in this field are just 3 [20, 25, 30]. It defines a value in a scale equivalent to [20, 25, 30] dB below the nominal level value for a given audio input. If the numerical value is not in this list, the unit will reply with an error message.
- **Depth Level>** the allowed numerical values in this field are just 4 [20, 30, 60, 80]. It defines a value in a scale equivalent to [20, 30, 60, 80] dB. If the numerical value is not in this list, the unit will reply with an error message.
- <attack Time Value> the allowed numerical values in this field are just 4 [50, 100, 200, 300]. It defines a value in a scale equivalent to [50, 100, 200, 300] milliseconds. If the numerical value is not in this list, the unit will reply with an error message.
- <Release Time Value> the allowed numerical values in this field are just 5 [300, 500, 1000, 2000, 3000]. It defines a value in a scale equivalent to [300, 500, 1000, 2000, 3000] milliseconds. If the numerical value is not in this list, the unit will reply with an error message.
- <Remote Select Value> are text strings (without blank spaces) that identify the function of the analogue (0 10 VDC) remote control selector connected to a physical "REMOTE" port in the device.
  - In the case of the CA120, there are just two possible string values for this parameter:
    - o INPUTS
    - PRESETS

In the CA120, a single REMOTE port admits the connection of a **WpaVOL-SR** unit, which has a volume control knob and a 5-position rotary switch, or selector. The selector can be used in any of these two modes:

- INPUTS: to select the active audio source(s) (LINE1, LINE2, MICL3, LINE1\_AND\_MICL3 or LINE2\_AND\_ MICL3.
- PRESETS: to recall any of the 5 presets in the memory of the unit, which store the full configuration of the unit, including volumes, EQ, etc.
- The factory default working mode of the selector is **INPUTS**, and it can just be modified to **PRESETS** by means of an RS-232 connection.

- <Zone> are text strings (without blank spaces) that identify a zone where the command will operate.
  - o ZA (output labeled as ZA or L)
  - o ZB (output labeled as ZB or R)
- <Micro Name> are text strings (without blank spaces) that identify the MIC inputs
  in the unit.
  - o MICRO1
  - o MICRO2
- **Output Mode>** are text strings (without blank spaces) that identify the amplifier's output working mode.

In the CA120 there are just two possible values for this parameter:

- STEREO
- MONO
- <Zone Label> is a text string that contains the customized name for a zone. The
  maximum length for this string is 17 characters, being ignored those exceeding
  this limit. Blank characters are not allowed. A valid example: MAIN HALL
- <Display Mode> are text strings (without blank spaces) that identify the LCD display working mode.
  - o ON
  - o DIMMED
  - o OFF
- <Contrast Level> are numerical values in the [0...100] range that define the LCD display contrast level.
- <Assign Value> are text strings (without blank spaces) that identify the Talkover / Pager function assignment for a MIC input towards the device's outputs.
  - o OFF
  - o ZA
  - o ZB
  - o ZA-B
  - PAGER
- **Priority** is a numerical value that defines the Talkover function priority of one MIC input in front of the other inputs in the unit.
- **<Error ID>** is a numerical value for an error code.
- "<Error Description>" is a text chain inside double quotation marks, containing an error description.

# **CA120** AMPLIFIER

TYPE	PARAM1	PARAM2	PARAM3	PARAM4	DESCRIPTION
GET	ALL				Dumps current device status (with DATA messages)
	PRESET_NUMBER				Gets the current PRESET number
	OUTPUT_MODE				Gets the current amplifier OUTPUT MODE
	INPUT				Gets the current active INPUTs
	LIN3_SELECTOR				Gets the current LIN3 SELECTOR status
	MUTE				Gets the current MUTE status
	MASTER_VOL				Gets the current MASTER VOLUME
	LINE1_VOL				Gets the current LINE1 VOLUME
	LINE2_VOL				Gets the current LINE2 VOLUME
	MICL3_VOL				Gets the current MICL3VOLUME
	LINE1_BASS				Gets the current LINE1 BASS LEVEL
	LINE2_BASS				Gets the current LINE2 BASS LEVEL
	MICL3_BASS				Gets the current MICL3 BASS LEVEL
	LINE1_TREBLE				Gets the current LINE1 TREBLE LEVEL
	LINE2_TREBLE				Gets the current LINE2 TREBLE LEVEL
	MICL3_TREBLE				Gets the current MICL3 TREBLE LEVEL
	GATE				Gets the current NOISE GATE ON/OFF status
	GATE_THRESHOLD				Gets the current NOISE GATE THRESHOLD LEVEL
	TALKOVER				Gets the current TALKOVER ON/OFF status
	TALKOVER_THRESHOLD				Gets the current TALKOVER THRESHOLD LEVEL
	TALKOVER_ATTACK				Gets the current TALKOVER ATTACK TIME
	TALKOVER_RELEASE				Gets the current TALKOVER RELEASE TIME
	TALKOVER_DEPTH				Gets the current TALKOVER DEPTH (attenuation)
	REMOTE				Gets the current REMOTE ON/OFF status
	REMOTE_SELECTOR				Gets de current REMOTE SELECTOR function
	AUTO_STANDBY				Gets the current AUTO STANDBY ON/OFF status
	AUTOLOAD_PRESET1				Gets the current AUTOLOAD_PRESET1 at Startup function

	PANEL_LOCKED		Get the current PANEL_ LOCKED (front knob) status
	INFO_MODEL		Gets the Device model name
	INFO_VERSION		Gets the current Firmware Version
SET	LOAD_PRESET	<preset number=""></preset>	Recalls and activates a PRESET
	SAVE_PRESET	<preset number=""></preset>	Saves the current PRESET
	INPUT	<input name=""/>	Sets the current active INPUT(s)
	MUTE	ON/OFF	Sets the current MUTE status
	MASTER_VOL	<volume level=""></volume>	Sets the current MASTER VOLUME
	LINE1_VOL	<volume level=""></volume>	Sets the current LINE1 VOLUME
	LINE2_VOL	<volume level=""></volume>	Sets the current LINE2 VOLUME
	MICL3_VOL	<volume level=""></volume>	Sets the current MICL3 VOLUME
	LINE1_BASS	<tone level=""></tone>	Sets the current LINE1 BASS LEVEL
	LINE2_BASS	<tone level=""></tone>	Sets the current LINE2 BASS LEVEL
	MICL3_BASS	<tone level=""></tone>	Sets the current MICL3 BASS LEVEL
	LINE1_TREBLE	<tone level=""></tone>	Sets the current LINE1 TREBLE LEVEL
	LINE2_TREBLE	<tone level=""></tone>	Sets the current LINE2 TREBLE LEVEL
	MICL3_TREBLE	<tone level=""></tone>	Sets the current MICL3 TREBLE LEVEL
	GATE_THRESHOLD	<threshold level=""></threshold>	Sets the current NOISE GATE THRESHOLD LEVEL
	TALKOVER_THRESHOLD	<threshold level=""></threshold>	Sets the current TALKOVER THRESHOLD LEVEL
	TALKOVER_ATTACK	<attack time="" value=""></attack>	Sets the current TALKOVER ATTACK TIME
	TALKOVER_RELEASE	<release time="" value=""></release>	Sets the current TALKOVER RELEASE TIME
	TALKOVER_DEPTH	<depth level=""></depth>	Sets the current TALKOVER DEPTH (attenuation)
	MASTER_VOL_INC	<increment value=""></increment>	Increments the current MASTER VOLUME
	MASTER_VOL_DEC	<increment value=""></increment>	Decrements the current MASTER VOLUME
	REMOTE_SELECTOR	<remote selector="" value=""></remote>	Sets de current REMOTE SELECTOR function
	AUTOLOAD_PRESET1	ON/OFF	Sets the current AUTOLOAD_PRESET1 at Startup function
	PANEL_LOCKED	ON/OFF	Sets the current PANEL_ LOCKED (front knob) status
DATA	PRESET_NUMBER	<preset number=""></preset>	Shows the current PRESET
	PRESET_DONE		Shows that the last SET LOAD_PRESET n command has been
			processed: the preset is loaded and active

OUTPUT_MODE	<outputmode></outputmode>	Shows the current amplifier OUTPUT MODE (MONO/STEREO/BRIDGE)
INPUT	<input name=""/>	Shows the current active INPUT(s)
LIN3_SELECTOR		Shows the current LIN3 SELECTOR status
MUTE	ON/OFF	Shows the current MUTE status
MASTER_VOL	<volume level=""></volume>	Shows the current MASTER VOLUME
LINE1_VOL	<volume level=""></volume>	Shows the current LINE1 VOLUME
LINE2_VOL	<volume level=""></volume>	Shows the current LINE2 VOLUME
MICL3_VOL	<volume level=""></volume>	Shows the current MICL3 VOLUME
LINE1_BASS	<tone level=""></tone>	Shows the current LINE1 BASS LEVEL
LINE2_BASS	<tone level=""></tone>	Shows the current LINE2 BASS LEVEL
MICL3_BASS	<tone level=""></tone>	Shows the current MICL3 BASS LEVEL
LINE1_TREBLE	<tone level=""></tone>	Shows the current LINE1 TREBLE LEVEL
LINE2_TREBLE	<tone level=""></tone>	Shows the current LINE2 TREBLE LEVEL
MICL3_TREBLE	<tone level=""></tone>	Shows the current MICL3 TREBLE LEVEL
GATE	ON/OFF	Shows the current NOISE GATE ON/OFF status
GATE_THRESHOLD	<threshold level=""></threshold>	Shows the current NOISE GATE THRESHOLD LEVEL
TALKOVER	ON/OFF	Shows the current TALKOVER ON/OFF status
TALKOVER_THRESHOLD	<threshold level=""></threshold>	Shows the current TALKOVER THRESHOLD LEVEL
TALKOVER_ATTACK	<attack time="" value=""></attack>	Shows the current TALKOVER ATTACK TIME
TALKOVER_RELEASE	<release time="" value=""></release>	Shows the current TALKOVER RELEASE TIME
TALKOVER_DEPTH	<depth level=""></depth>	Shows the current TALKOVER DEPTH (attenuation)
REMOTE	ON/OFF	Shows the current REMOTE ON/OFF status
REMOTE_SELECTOR	<remote selector="" value=""></remote>	Shows de current REMOTE SELECTOR function
AUTO_STANDBY	ON/OFF	Shows the current STANSBY ON/OFF status
AUTOLOAD_PRESET1	ON/OFF	Shows the current AUTOLOAD_PRESET1 at Startup function
PANEL_LOCKED	ON/OFF	Shows the current PANEL_ LOCKED (front knob) status
INFO_MODEL	<device model=""></device>	Shows the Device Model
INFO_VERSION	<firmware version=""></firmware>	Shows the current Firmware Version
<error id=""></error>	" <error description="">"</error>	Informs about an error
