As equipment can be exposed to a variety of atmospheric conditions that are beyond Bally Refrigeration's control, customers need to decide which coating best suits their application needs. All coil coatings are sold and applied by third party suppliers and while these products can extend the life and integrity of the equipment, Bally Refrigeration cannot recommend, endorse or warrant any of these products. For more information on coil coatings contact your local Bally Refrigeration representative for assistance.

BLC LEAD LAG CONTROL PANEL

- For use on TWO independent refrigeration systems (one system used for back-up) using pumpdown control mode. (Thermostat wired into liquid line solenoid valve).
- Panel can be mounted at the first condensing unit on indoor installations or be mounted remote inside on a wall when used with outdoor condensing units.
- The panel is designed to operate each system automatically every 24 hours or can be manually set to run either system independently.
- A shipped loose thermostat will bring the lag unit on for auxiliary cooling if the room temperature rises above it's setpoint. Alarm will activate if room temp does not lower within the specified time period.
- Indicator lights show if the system is in auxiliary cooling mode and/or if in alarm. Dry contact (10A 230V) for alarm circuit can be field wired to remote indicator (buzzer).
- The remote control panel can be easily installed and wired by installing a contactor (provided loose) to each system. Each contactor interrupts the power to the defrost clock /thermostat and liquid solenoid circuits which enables the condensing unit to pumpdown and shut down the system.
- The panel is suitable for Air defrost (with or without clock) or Hot gas systems as well as Electric defrost evaporator systems.
- Refer to the Product Data & Installation brochure for further information.
