## OVS-02GT Program Quick Start Guide

## **ANDROID**

STEP 1: Download app, and Open OPTEX virtual loop (white icon with a car)

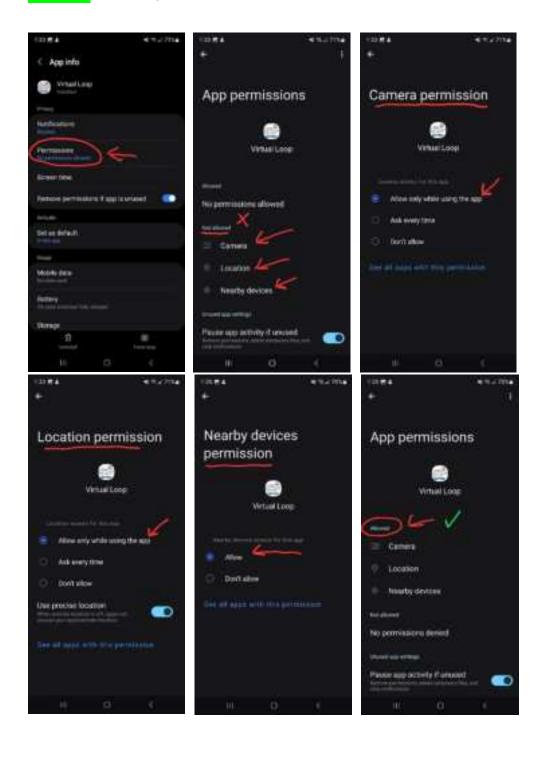

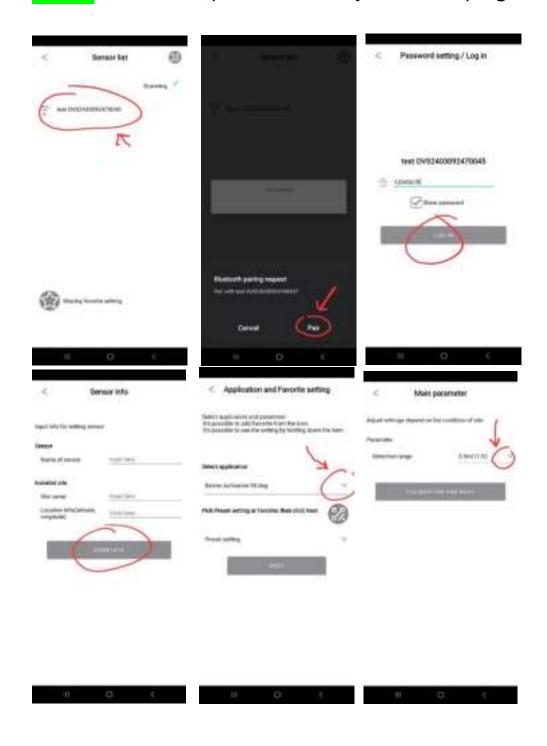

## • STEP 2: Allow permissions

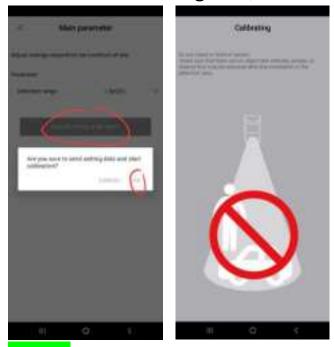

• STEP 3: Sensor list, pick the sensor you want to program.

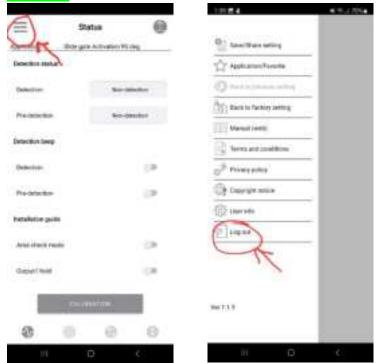

\*Note: Input 8-digit password, Default: 12345678

 STEP 4: Calibrate, (\*Note: Clear area before calibrating. If sensor is still flashing blue, calibration did not complete)

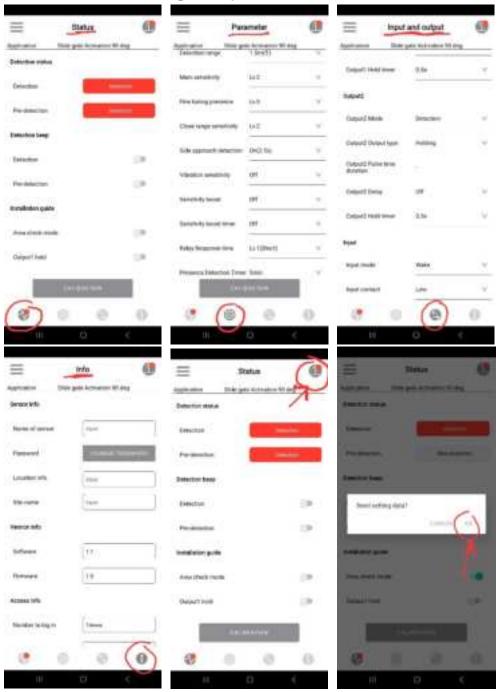

• STEP 5: Log out, go to the main page, the 3 lines at top left.

• STEP 6: Test the sensor

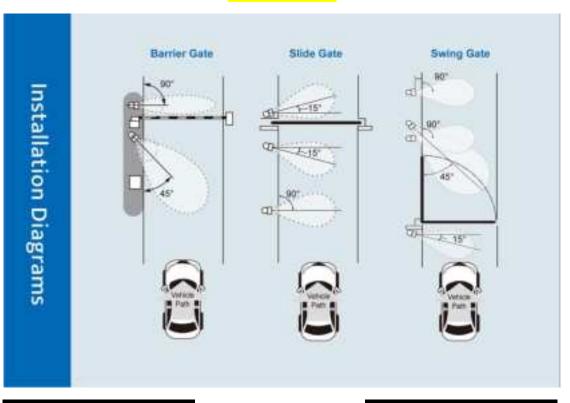

Note: relay will be in the close state until programed.

 If further programming is needed, reconnect to the sensor and fine tune the settings. Repeat until desired result is achieved.

\*Note: If you make any changes, tap the arrow up icon at the top right-hand corner and make sure to calibrate before testing.

## **APPLICATIONS**

**Selecting in APP** 

• Optional: if you want the indicator on the sensor on, go to the input/output tab, the 2 arrows pointing in opposite directions on the bottom of the app page. Turn the indicator switch on, top right arrow with a red dot touch on that, send the information.
