Arrigo BMS is compatible with all generations of Regin field products, ensuring a smooth transition to the next generation of building management with no need to exchange any field products.

CHECK OUT THE NEW GENERATION OF HEATING CONTROLLERS

NOW THE VERSATILE HEATING CONTROLLERS EXIGO have been boosted with an up-graded software and predefined configurations

that can easily be selected via the text display. Welcome to take a look at the new models in the HCA... and HCV... family.

41

EXTENDED RANGE OF TOUCH DISPLAYS

OUR EXTENSIVE RANGE of displays for controllers with graphical web interface has now been extended with a new capacitive touch display, ED-T70W.

32

NEW READY STEADY GO DUCT TRANSMITTERS

THE NEW DTTH(C) SERIES of duct-mounted transmitters (0...10V) for energy-efficient, demand-controlled ventilation systems is the most recent addition to our extensive range of transmitters. With an IP65-classified housing, they are well suited for all kinds of dusty environments.

106

EFFICIENT CLAMP-ON SENSORS FOR SURFACE TEMPERATURE MEASUREMENT

THESE IP65 TEMPERATURE SENSORS TG-AH4 are designed for Ready-Steady-Go installation. They are available in many different models based on a wide range of different sensor elements. Smart features, such as the twistable cover, replaceable cable gland and easy access to connections make installation as it should be. Fast, easy and efficient.

89

THE OPTIGO FAMILY IS GROWING

*New stand-alone ventilation controller –
for installation on the fly.*

THE OPTIGO CONTROLLER SERIES (24 V AC) makes it cost-efficient, quick, and easy to set up basic ventilation applications, such as control of fan levels, temperature,

CO₂, humidity, and fire/smoke. The controllers are sold with ready-to-be installed configurations inside. Just pick and activate the configuration, adjust the settings and go!

42

ENERGY-EFFICIENT SYSTEMS. OPTIMIZED HYDRONIC FLOW

PRESSURE-INDEPENDENT CONTROL VALVES are the ideal solution for any modern HVAC system. Besides saving operating costs and being easy to install, they reduce pump power and always ensure the correct flow in partial and full load situations. The valves automatically keep the differential pressure on a constant level, no matter the load conditions. This ensures stable and precise temperature control.

HANDLING THE SYSTEM BECOMES READY STEADY GO.

- ✓ Select the valve based on the load requirement
- ✓ Skip KV-, pressure drop-, and valve authority calculations and save hours
- ✓ When the system changes and new zones are added there is no need to rebalance the system.

At Regin, we provide pressure-independent control valves and matching actuators for reliable and sustainable systems. Our latest addition to the range is the new RVAZ2 actuator series. Besides being compatible with most zone valves available on the market, the series fits perfectly with our PCMTV/PCTVS series of pressure-independent control valves.

190

NEW DAMPER ACTUATORS WITH MODBUS RTU-COMMUNICATION

SELF-CENTERING SHAFT ADAPTER, position indication and adjustable mechanical limit stop are just a few of the features that come with our brand-new series of RDA-rotary air damper actuators. With smart design for easy installation and configuration they save time and make your work Ready-Steady-Go.

I/O MODULES

Overview

Regin's expansion units and I/O modules offer the possibility to expand the freely programmable controllers EXOclever and EXOcompact.

Integration of the expansion units and I/O modules into an EXO system is intended for advanced system integrators only, as it demands a deep knowledge of the EXO system. Up to 32 expansion units and I/O modules can be connected but the limit is set by the system integrator and the application.

DISTRICT HEATING

2-way control valves, DN15-50, kvs 0.25-40, 20 mm stroke, DZR

2-way valves designed for control of cold, hot or glycol-mixed water, for use in DZR requirement systems (DZR = Dezincification Resistant) or district heating within the temperature range -5°C...+150°C. They are pressure balanced (from DN20-50, not DN15) and can therefore handle high differential pressure with low force. The valves are intended to be used together with Regin's RVAN5 actuators. We also offer adapters for actuators of other brands.

For steam applications or at pressure drops of 7 bar or higher, we recommend using a metal packing (stainless steel). Use the extra letter M at the end of the reference type when ordering a valve with metal packing, for example NTVS50-27M instead of the usual NTVS50-27. For valves with metal packing, the maximum leakage is 0.05 % of kvs.

The NTVS valves meet the requirements of DIN-standard DIN 3202/FI and ISO 5752 table I.

HEATING / COOLING / VENTILATION

2- and 3-way control valves DN15-25, kvs 0.25-7.0, 5.5 mm stroke

2-way control valves, DN15-50, kvs 0.25-40, 20 mm stroke, DZR

2-way valves designed for control of cold, hot or glycol-mixed water, for use in DZR requirement systems (DZR = Dezincification Resistant) or district heating within the temperature range -5°C...+150°C. They are pressure balanced (from DN20-50, not DN15) and can therefore handle high differential pressure with low force. The valves are intended to be used together with Regin's RVAN5 actuators. We also offer adapters for actuators of other brands.

3-way control valves DN15-50, kvs 0.63-40, 20 mm stroke, DZR

Valves intended for control of cold, hot and glycol-mixed water in heating, ventilation and when DZR material is a requirement (DZR = Dezincification Resistant). The valves are intended to be used together with Regin’s RVAN5 actuators. RVAN10 actuators can also be used if larger actuating force is required. The valve is supplied with a cover lid for converting the 3-way valve into a 2-way valve.

ΔP_s constitutes the max. permitted differential pressure at which the valve actuator can safely close against the pressure.

ΔP_{max} constitutes the max. permitted differential pressure over the flow path of the valve for the entire actuating range of the actuator (i.e. open valve).

2-way control valves, DN15-50, kvs 0.6-39, 20 mm stroke

The valves are designed for control of hot, cold or glycol-mixed water in heating and ventilation systems. They are pressure balanced (from DN20-50, not DN15) and can therefore handle high differential pressure with low force. The valves are intended to be used together with Regin's RVAN5 actuators. They should not be used in domestic water systems.

2- and 3-way ball valves, DN15-50, kvs 0.6-63

Ball valves designed for control of hot, cold or glycol-mixed water in heating and ventilation systems. These ball valves can be used as either characterized control ball valves when a flow plate is installed in port A (default mode), or as on/off ball valves when the flow plate is removed. When the flow plate is removed the Kvs between port A and AB is increased. The valves are intended for use with Regin's RVAB4/RVAB5 actuators.

S0603080300	Spare parts kit, packing box for ETRS, MTRS and MTRS valves (until 2019-12), for ETVS valves (until 2021-04) and NTVS valves.	

For steam applications or at pressure drops of 7 bar or higher, we recommend using a metal packing (stainless steel). Use the extra letter M at the end of the reference type when ordering a valve with metal packing, for example NTVS50-27M instead of the usual NTVS50-27. For valves with metal packing, the maximum leakage is 0.05 % of kvs.

The NTVS valves meet the requirements of DIN-standard DIN 3202/FI and ISO 5752 table 1.

Quick guide to choose adapter after taking measurements of valve

Measure the valve in closed position (NC)* (A in image on next page). Subtract 0.5 mm for safety margin and compensation for tolerance. Compare the result with column “Closing measure A (mm)” in the above table and see which adapter to use.

As an example: If you measure 10.5 mm on the valve in close position and valve stroke is within actuator stroke limitation, you choose an adapter with closing measurements of 10 mm. In this example it would be VA50, if the valve is M30 x 1.5.

Make sure the same measurements in open position is within the actuator stroke range. For instance, the 100N actuator with 4 mm stroke would in the above example have an upper limit of 10 (closing measurement) + 4 (actuator max stroke) = 14 mm. If the valve has a larger stroke, the stroke of the valve is reduced by the actuator. This can lead to a reduced max flow. If reduction of flow is unacceptable, use Regin’s 125N actuator with 6,5 mm stroke instead.

If you can’t find a suitable adapter in the above list, please contact Regin for further help.

*NC, normally closed actuator refers to valves that closes when the stem is pushed into the valve, like radiator valves usually do. For valves closing upwards (when valve stem is pushed out of valve with a spring normally) you must think in the opposite way.
