12.Airflow Auto Adjustment Characteristics

FXMQ07-09PBVJU

- Notes :
- 1.This indoor unit has the "Automatic air flow rate adjustment" function, which automatically adjusts the air flow rate so as to be approximately in the range of $\pm 10\%$ of the rated value, at the time of installation.

2.After duct construction completion, please perform local setting "airflow auto adjustment" by remote controller.

3.About the local setting method of the "airflow auto adjustment", look at the installation manual which is attached to an indoor unit.

4.External static pressure that can adjust by "airflow auto adjustment" function is 0.12in.WG(30Pa) - 0.4in.WG(100Pa) (When air flow is HH).

5.If the unit is used beyond the range of the above-mentioned external static pressure, the air flow rate can not be well-adjusted automatically, and the unit will operate with the air flow rate different from the rated value.

6.This figure shows a fan characteristics at the time of "HH", "H" and "L".

7.The remote controller can be used to change "HH", "H" and "L".
