IMPORTANT SAFETY WARNING

PROLONGED CONTINUOUS OPERATION OF AN AMPLIFIER, SPEAKER, OR SUBWOOFER IN A DISTORTED, CLIPPED OR OVER-POWERED MANNER CAN CAUSE YOUR AUDIO SYSTEM TO OVERHEAT, POSSIBLY CATCHING FIRE AND RESULTING IN SERIOUS DAMAGE TO YOUR COMPONENTS AND/OR VEHICLE. AMPLIFIERS REQUIRE UP TO 4 INCHES (10CM) OPEN VENTILATION. SUBWOOFERS SHOULD BE MOUNTED WITH AT LEAST 1 INCH (2.5CM) CLEARANCE BETWEEN THE FRONT OF THE SPEAKER AND ANY SURFACE. KICKER PRODUCTS ARE CAPABLE OF PRODUCING SOUND LEVELS THAT CAN PERMANENTLY DAMAGE YOUR HEARING! TURNING UP A SYSTEM TO A LEVEL THAT HAS AUDIBLE DISTORTION IS MORE DAMAGING TO YOUR EARS THAN LISTENING TO AN UNDISTORTED SYSTEM AT THE SAME VOLUME LEVEL. THE THRESHOLD OF PAIN IS ALWAYS AN INDICATOR THAT THE SOUND LEVEL IS TOO LOUD AND MAY PERMANENTLY DAMAGE YOUR HEARING. PLEASE USE COMMON SENSE WHEN CONTROLLING VOLUME.

Note: All specifications and performance figures are subject to change. Please visit **www.kicker.com** for the most current information. To get the best performance from your new KICKER speakers, we recommend using genuine KICKER accessories and wiring. Please allow two weeks of break-in time for the speakers to reach optimum performance.

Pro Tip: You’re a KICKER KXMA amplifier and a few cables away from a full system upgrade that will dominate any factory system! KICKER line of amplifiers make it easy to upgrade to solid bass with your existing or stock source unit. Also, ask your dealer about KICKER Subwoofer upgrades.

Installation

Step 1: Determine the location and placement of the KMTC cans onto the pipe or tube to which you are mounting. Spreading the KMTC Loaded Marine Cans apart will provide better stereo performance, and is usually preferable. When determining the best locations for mounting, be careful to look for obstacles or obstructions that could complicate mounting the KMTC. Please keep in mind the routing of your speaker wires as this can affect where you finally mount your cans. You will need to mark and drill a wire routing hole in the pipe 5/8" (16mm) in diameter. The placement of the hole must line up with the final position of the lower mounting bracket so that the wiring coming from the lower mounting bracket can be run through; ie the hole should be 90° from the direction the speakers will be aimed and in-line with the wiring coming from the lower mounting bracket. If the speakers will be level with the horizon, you should drill a hole directly in the bottom of the tube.

Step 2: Thread the speaker and LED wires through the bottom of the lower mounting bracket and out of the plastic liner hole in the center.

*IMPORTANT: You must apply a thin layer of the included anti-seize compound to **ALL** threaded fasteners before installation.*

Step 3: The mounting hardware design provides versatility in angular positioning to direct the speaker's output to the ideal listening position using the quick adjust swivel lever. With the lower mounting bracket in place, install the swivel clamp and tightly secure it using the included swivel bolt, making sure the clamp engages with the groove in the swivel base.

Step 4: Partially install the swivel lever, adjusting it to be loose (open) when the lever is parallel to the tube, then finish tightly securing the swivel lever to the enclosure using the included thumbscrew. When the swivel lever is locked in place, or closed, the bracket rotation assembly will be clamped tight.

Step 5: Extend the speaker and LED wiring through the hole you have drilled and connect them to your source unit or amplifier. KICKER recommends you solder the connections and secure them with heat shrink.

Black : +12V

Red : Ground

Green : Ground

Blue : Ground

Transparent Blue : Speaker +

Transparent Gray : Speaker –

When hard-wiring the LED lighting, the black lead is +12V and the blue, red and green leads are ground.

1. Connect the black LED wire to the positive terminal of the battery.

a. Place a 2-amp fuse (not included) no further than 7" away from the battery terminal.

b. Install a switch (not included) on the black LED wire between the fuse and the speaker, so the LED's can be turned off. Without a switch to turn them off, they will always be on.

2. Connect the red, blue and/or green LED wires to the negative terminal of the battery. See the chart below for available combinations. **Splice and combine the ground wires to yield a different color.** There are seven colors available, depending on your wiring configuration. KICKER recommends using the KMLC lighting controller (sold separately) for more colors, patterns, and special effects.

Step 6: Secure the enclosure to the tower tube with the upper and lower mounting brackets. With the wiring clearance hole you drilled and the wiring shroud on the lower mounting bracket lined up, position the enclosure assembly so that it is tightly against the tower tube. Once in position, install the upper mounting bracket using the included stainless steel socket-head cap screws. You will need to choose the appropriate length fastener based on the size of the tower tube to which you're mounting. Ensure the enclosure is secure by increasing the tension of the swivel lever thumbscrew attached to the swivel lever.

With the enclosure securely mounted, you may finish by opening the swivel lever and swiveling the assembly left or right. When you are satisfied with the orientation, close the swivel lever to lock the enclosure in place. If the enclosure is not locked tightly enough, tighten the thumbscrew.
