Product Overview

Front/top view

The light on the top of your node gives you information about the node's operation.

Light description	Status
Blinking blue	Node is starting up
Solid blue	Node is working great
Blinking purple	Node is paired with phone for setup
Solid purple	Node is ready for setup
Blinking red	Node has lost connection to primary node
Solid red	Node has lost connection to the internet
Solid yellow	Node is too far from another node connected to your Velop system

Bottom view

1. **Reset button**—Press and hold until the light on top of the node turns red, fades and flashes bright red again to reset the node to its factory defaults.
2. **Ethernet ports**—Connect Ethernet cables to these Gigabit Ethernet (10/100/1000) ports and to other wired devices on your network. If you have more than one node in your Velop system, use one of these ports to connect to your modem or modem router.

Note—For best performance, use a CAT5e or higher rated cable on the Ethernet port.

3. **Power switch**—Press | (on) to power on the node.
4. **Power port**—Connect the included AC power adapter to this port.

Help

Where to find more help

- Linksys.com/support/Velop
- Linksys app help (launch the app and click *Help* in the main navigation menu)

Note—Licenses and notices for third party software used in this product may be viewed on <http://support.linksys.com/en-us/license>. Please contact <http://support.linksys.com/en-us/gplcodecenter> for questions or GPL source code requests.

Set Up

Download the Linksys app. You need this app to set up Velop.

Go to the app store for your device and search for Linksys.

Install the app, open it and follow the instructions.

Note—The app works with iOS 8.x and later, and Android 4.0.3 and later.

During setup you will create a Linksys Smart Wi-Fi account so you can use the app to view or change your Velop system settings from anywhere you have an internet connection.

Among the many things you can do with Linksys Smart Wi-Fi:

- Change your Wi-Fi name and password
- Set up guest access
- Connect devices to Wi-Fi with WPS
- Block internet with parental controls
- Test your internet connection speed

Note—During setup we'll send a verification email. From your home network, click the link in the email.

Other than plugging in the power and the ethernet cable, the app-based setup process does the work for you. Once connected, use the app to personalize your Wi-Fi by giving it a name and password. You also can give nodes names based on where they are so you can identify them in the rare case where things need attention.

What you'll need

Find a power source near to your modem or modem router. Connect to your first node.

If you have more than one node, they can be set up anywhere within range of another working node. Only one node has to be wired to the modem or modem router. Don't worry, the app will help you place your nodes.

Print this page, then record your Wi-Fi and account settings in the table as a reference. Store your notes in a safe place.

Velop System Settings

Using your Linksys app, you can view or change Velop system settings to make your Wi-Fi more secure or to work better with a device or game. You can access settings from anywhere in the world if you have an internet connection, but you can also access your Velop system directly from your home network if you are not online.

Log in to your Linksys Smart Wi-Fi cloud account

1. Open the Linksys app.

The image shows the login screen of the Linksys app. At the top, the 'LINKSYS' logo is displayed in white on a dark blue background. Below the logo are two input fields: 'Email Address' and 'Password'. To the right of the password field is a link that says 'Forgot Password?'. Below these fields is a large blue button with the text 'Log In' in white. Underneath the button is a horizontal line with the word 'OR' in the center. Below this line is a link that says 'Log in with router password'. At the very bottom of the screen, there is a link that says 'Don't have an account? Sign Up'.

2. Enter the email address you used when creating your account.
3. Enter your account password.
4. Tap **Log in**.

Dashboard

Dashboard is a snapshot of your Wi-Fi. See how many devices are connected to your Velop system. Share Wi-Fi password and allow guest access to your Wi-Fi. Dashboard also shows you if any devices have parental controls on them or have been prioritized for Wi-Fi access.

Devices

View and change details for all devices connected to your Wi-Fi. You can view devices on your main network and your guest network, or display information about each device.

To view or change device details

From the Devices screen you can edit device names and change the device icons. You also can prioritize devices, set parental controls, and see Wi-Fi details. Tap on any device to see details.

Wi-Fi Settings

View or change your Wi-Fi name and password and connect devices using Wi-Fi Protected Setup™.

Advanced Settings

Advanced users can change the default security type and Wi-Fi mode. Do not change these unless you have a lot of experience with Wi-Fi networks. Channel Finder will search for the most-open Wi-Fi channels in your area to ensure you get the best performance from your Velop system. If you have more than one node in your Velop system, Channel Finder will find the best channel for each node.

Connect a Device with WPS

Wi-Fi Protected Setup allows you to easily connect wireless devices to your Wi-Fi without manually entering security settings.

Guest Access

Use your Guest Access to allow guests to get online while restricting their access to other resources connected to your Wi-Fi. Send the password by text message or email.

Speed Test

Run a speed test to make sure you are getting the speeds you are paying for. Speed test also helps in Device Prioritization because results determine how Wi-Fi is distributed to the prioritized devices.

- **Download speed** is the rate at which internet content is transferred to your Velop system.
- **Upload speed** is the rate at which you can upload content to the internet.

Note—Internet connection speeds are determined by a variety of factors, including ISP account type, local and worldwide internet traffic, and number of devices in your home that are sharing the internet connection.

Parental Controls

Parental controls allow you to control when your kids are online and what they're doing there. Block internet to specific devices, or block specific websites.

Device Prioritization

Choose up to three devices for priority usage of your internet connection. Those devices – wired and/or wireless – always will have the best access when connected. Velop runs a speed test to determine how to best distribute Wi-Fi to prioritized devices. Other devices will share the leftover capacity. Prioritized devices appear on Dashboard.

Notifications

Velop can notify you when nodes in your system go offline. You can also ask Velop to alert you when a node is connected with an Ethernet cable to another node and is ready for setup. You have to turn on notifications in your mobile device settings to allow Velop to notify you.

Velop Administration

Use the Velop Administration screen to change the admin password and hint, and check various identifiers (model number, serial number, and IP details) for all nodes in your Wi-Fi.

Opt in to automatically report crashes to Linksys and contribute to improving the Wi-Fi experience. You also can manually report specific issues to Linksys.

The following information will be sent with your description of the issue:

• App version	• Login Type (<i>cloud: show email address associated, local: display "Velop admin"</i>)
• Device model	• WAN Connection type (display <i>Wi-Fi or Ethernet</i>)
• Device OS version	• Time: date (<i>mo/day/year, time, time zone</i>)

Advanced Settings

Internet Settings

You can choose how your Velop system connects to the internet. The default is *Automatic Configuration - DHCP*. Other connection types depend on your internet service provider or how you plan to use your Velop system. Advanced users can use *Additional Settings* to clone MAC addresses and set MTU (maximum transmission unit).

Port Settings

Port forwarding—for a single port, multiple ports or a range of ports—sends traffic inbound on a specific port or ports to a specific device or port on your Wi-Fi. In port range triggering, Velop watches outgoing data for specific port numbers. Velop remembers the IP address of the device that requests the data so that when the requested data returns, it is routed back to the proper device.

Wi-Fi MAC Filters

Every network device has a unique 12-digit MAC (media access control) address. You can create a list of MAC addresses, and then allow or deny those devices on your Wi-Fi.

My Account

Change your Linksys account password and opt in to receive the latest news and deals from Linksys.

Help

Having trouble with the app? Just need a little more information about a feature? Tap Help for an explanation.

Feedback

Here's your chance to tell us what you think. Rate the app at your app store, send us a suggestion, or report an issue that's keeping you from a great experience.

Connect Directly To Velop

If you are not connected to the internet you still can access your Velop system. Connect to your Wi-Fi name, launch the Linksys app and tap *Log in with Admin Password* toward the bottom of the screen. You will not be able to access your Linksys Wi-Fi account when not online.

Velop admin password

We created a secure Velop admin password during setup. To change it, tap *Velop Administration* and *Change Admin Password and Hint*.

To keep your Velop system secure, we'll send you an email if someone changes the admin password.

How to restore factory defaults

You should never need to factory reset your Velop—a very disruptive process. A factory reset restores your Velop system to the state it was when you took it out of its box, requiring you to go through the setup process again. All settings you have customized in setup and since – things such as Wi-Fi name, passwords, security type – will be erased. All wireless devices will disconnect from your Wi-Fi.

To reset Velop:

- With your node connected to power and turned on, press and hold the Reset button on the bottom. The light on top of the node will turn red and fade in pulses. Do not release the button until the light goes out and then turns bright red.

Note—If you have more than one node in your Velop system, you might need to reset them all to factory default settings. You can do that by resetting the main node; all other nodes will reset automatically.

Specifications

Linksys Velop

Model Name	Velop
Model Number	WHW03
Switch Port Speed	10/100/1000 Mbps
Radio Frequency	2.4 GHz and 5 GHz
# of Antennas	6
Ports	Power, ethernet
Buttons	Power, Reset
LEDs	One, multicolored light for power and status
Security Features	WPA2-Personal, WPA2-Enterprise
Security Key Bits	Up to 128-bit encryption

Environmental

Dimensions	3.07" x 3.07" x 7.28" (78 x 78 x 185mm)
Unit Weight	17 oz (485 g)
Power	12V, 2A
Certifications	FCC, IC, CE, Wi-Fi (IEEE 802.11a/b/g/n/ac), Windows 7, Windows 8, DLNA
Operating Temp.	32° to 104° F (0 to 40° C)
Storage Temp.	-4° to 140° F (-20 to 60° C)
Operating Humidity	10% to 80% relative humidity, non-condensing
Storage Humidity	5% to 90% non-condensing

Notes:

For regulatory, warranty, and safety information, go to Linksys.com/support/Velop.

Specifications are subject to change without notice.

Maximum performance derived from IEEE Standard 802.11 specifications. Actual performance can vary, including lower wireless network capacity, data throughput rate, range and coverage. Performance depends on many factors, conditions and variables, including distance from the access point, volume of network traffic, building materials and construction, operating system used, mix of wireless products used, interference and other adverse conditions.
