Brief introduction of function

Daily data

Support daily calories, steps, distance data and target records.

Support to record the total number of steps in 24 hours and the number of walking steps in each period.

Support to view the history of steps in recent seven days.

Sleep

Support to record deep sleep, shallow sleep, rapid eye movement and waking state every day.

Weather

After the watch is connected to the APP, this weather interface will display real-time weather temperature and weather status

Support to view the weather data of the next week

Movement pattern

Click on the exercise interface to enter the exercise interface to support walking, running, riding, skipping, badminton, basketball, football, swimming, mountaineering, tennis, rugby, golf, yoga, fitness and dancing.

More detailed information analysis and data records can be viewed on the mobile APP side;

Blood oxygen monitoring

Before blood oxygen monitoring, make sure that the watch is correctly worn on the wrist (the best position is one finger wide above the wrist bone). Blood oxygen monitoring requires that the watch be worn tightly to avoid light leakage and cannot be effectively detected, and then enter the blood oxygen testing, and the wrist is required to remain stationary during the testing process. When entering the blood oxygen measurement interface, the green light at the bottom will light up and there will be a vibration reminder when the measurement is completed for 30-60 seconds. This measurement is based on PPG technology.

Support the measurement of current blood oxygen data
Support to view the historical data of blood oxygen for nearly seven times.

Heart rate monitoring

Before heart rate monitoring, make sure that the watch is properly worn on the wrist (the best position is one finger wide above the wrist bone). Heart rate monitoring requires that the watch be worn tightly to avoid light leakage, so that it cannot be effectively detected. Then, the wrist is required to remain stationary during the heart rate monitoring. When entering the heart rate measurement interface, the green light at the bottom lights up to start measuring, and there will be a vibration reminder when the measurement is completed.

Support the measurement of current heart rate data
Support 24-hour detection

Music control

After the watch is connected to the APP, it can control the pause and start, volume adjustment and song switching of the mobile phone music player;
When the mobile phone plays music, you can use the watch-controlled mobile phone to play/pause, play the previous song and play the next song.

Bluetooth call

Bluetooth calling function can be realized by connecting with mobile App, and the calling scene is more convenient.

Other functions

Common contacts, phone records, voice assistants, exercise records, physiological calendar, blood pressure monitoring, stress detection, relaxation, calendar, calculator, electronic business card, drainage, stopwatch, timer, alarm clock, message push and other functions.

FAQ

1. Why are QQ, WeChat and other information notified and reminded, but the bracelet is not reminded?

- 1.1 Confirm whether the message can be displayed normally in the notification bar of the mobile phone, and push the device message by reading the message in the notification bar of the mobile phone; If there is no message in the notification bar of the mobile phone, the device will not receive the push. (You need to find the notification and status bar in the mobile phone settings, and turn on the phone, SMS, etc.).
- 1.2 open the APP, enter the APP device bar-click the message reminder-and open the application switch button corresponding to the message push you want to receive.
- 1.3 The device is always connected with the Bluetooth of the mobile phone.

2. How does the device unbind from the mobile phone?

Android mobile phone

On the "Devices" page of the APP, click the "Unbind" button and select OK to unbind.

iPhone

- 2.1 On the "My"->"Device Information" page of the APP, click the "Unbind" button;
 - 2.2 Under Settings->Bluetooth->My Device of Apple's mobile phone, select the bracelet to be unbound, and click the blue "i" Logo, and then click "Ignore this device".
- Note: If Apple mobile phone does not ignore the device, it will not be able to search for the device when it is bound again, and it will still receive a reminder notice when there are reminders such as information and phone calls.

3. Why is it easy for Android phones to disconnect?

The APP must be running in the background, so that Bluetooth will not be automatically disconnected. However, the memory management of Android mobile phone system will forcibly turn off the APP, which requires us to manually turn off the power-saving mode of the mobile phone system or add the APP to the green background of system management, and the APP will not be forcibly turned off.

FCC Caution :

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
