## OVERVIEW

The UCS C220 M6 SFF server extends the capabilities of Cisco's Unified Computing System portfolio in a 1U form factor with the addition of the 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake), 16 DIMM slots per CPU for 3200-MHz DDR4 DIMMs with DIMM capacity points up to 256 GB. The maximum memory capacity for 2 CPUs is listed here:

- 8 TB (32 x 256 GB DDR4 DIMMs), or
- 12 TB (16 x 256 GB DDR4 DIMMs<sup>1</sup> and 16 x 512 GB Intel® Optane™ Persistent Memory Modules (PMEMs)).

There are several front UCSC-R2R3-C220M6drive and rear riser configurations:

### Front Drives

- Up to 10 SAS/SATA/NVMe drives (up to 4 of the drives can be NVMe), or
- Up to 10 NVME drives (all drives are NVMe)

### Rear PCIe Risers

- One to three half-height PCIe risers, or
- One to two full-height PCIe risers

The server provides an internal slot for one of the following:

- SATA Interposer to control SATA drives from the PCH (AHCI), or
- Cisco 12G RAID controller with cache backup to control SAS/SATA drives, or
- Cisco 12G SAS pass-through HBA to control SAS/SATA drives

**NOTE:**

PCIe drives are controlled directly from the CPUs

The UCS C220 M6 server has two LOM ports (10Gbase-T LOM) and a single 1 GbE management port. A modular LAN on motherboard (mLOM) module provides up to two 100 GbE ports. A connector on the front of the chassis provides KVM functionality.

The Cisco UCS C220 M6 server can be used standalone, or as part of the Cisco Unified Computing System, which unifies computing, networking, management, virtualization, and storage access into a single integrated architecture, enabling end-to-end server visibility, management, and control in both bare metal and virtualized environments.

See [Figure 1 on page 5](#) for front and rear views of the UCS C220 M6 server.

### Notes . . .

1. 256 GB DIMMs will be available in Q4 of 2021

**Notes:**

1. If NVMe drives are selected, you must also select 2 CPUs.
2. There are three PCIe riser connectors on the motherboard: they are labeled Riser 1, Riser 2, and Riser 3. If the server is configured with three half-height risers, Riser 1 plugs into Riser 1 connector, Riser 2 plugs into Riser 2 connector, and Riser 3 plugs into Riser 3 connector. If the server is configured with two full-height connectors, Riser 1 plugs into Riser 1 connector and Riser 2 plugs into Riser 3 connector. See [Risers, page 67](#) for more details.

## STEP 1 VERIFY SERVER SKU

Verify the product ID (PID) of the server as shown in [Table 2](#).

**Table 2** PID of the C220 M6 SFF Rack Base Server

Product ID (PID)	Description
UCS-M6-MLB	UCS M6 Rack, Blade, Chassis MLB This major line bundle (MLB) consists of the Server Node (UCSC-C245-M6SX6) with software PIDs. Use this PID to begin a new configuration.
UCSC-C220-M6S <sup>1</sup>	Up to 10 SFF front drives with no CPU, memory, HDD, PCIe cards, or power supply. All drives can be SAS/SATA HDDS or SSDs or optionally any of bays 1, 2, 3 and 4 can be NVMe PCIe SSDs and the rest can be SAS/SATA HDDs or SSDs.
UCSC-C220-M6N <sup>1</sup>	Up to 10 SFF front drives (NVMe PCIe SSDs only) with no CPU, memory, HDD, PCIe cards, or power supply

**Notes:**

1. This product may not be purchased outside of the approved bundles (must be ordered under the MLB)

The Cisco UCS C220 M6 SFF servers do not include power supplies, CPUs, DIMM memory, Intel® Optane™ Persistent Memory (PMEM), hard disk drives (HDDs), solid-state drives (SSDs), NVMe drives, riser 1, riser 2, riser 3, tool-less rail kit, or option cards.

**NOTE:** Use the steps on the following pages to configure the server with the components that you want to include.

## STEP 2 SELECT RISERS

The riser PIDs are listed in [Table 2](#). Full-height risers cannot be mixed with half-height risers.

**Table 3 PIDs of the Risers and Riser Blanks**

Product ID (PID)	Description
Included by default (no PID)	Half-height riser 1 (controlled by CPU1) <ul style="list-style-type: none"> <li>■ One x16 PCIe Gen4 riser, standard PCIe, supports Cisco VIC, half-height, 3/4 length</li> </ul>

- 

## Caveats

---

- The selection of 1 or 2 CPUs depends on the desired server functionality. See the following sections:
  - [STEP 4 SELECT MEMORY, page 23](#)
  - [STEP 5 SELECT DRIVE CONTROLLERS, page 30](#)
  - [STEP 6 SELECT DRIVES, page 34](#)
  - [STEP 7 SELECT OPTION CARD\(s\), page 38](#)

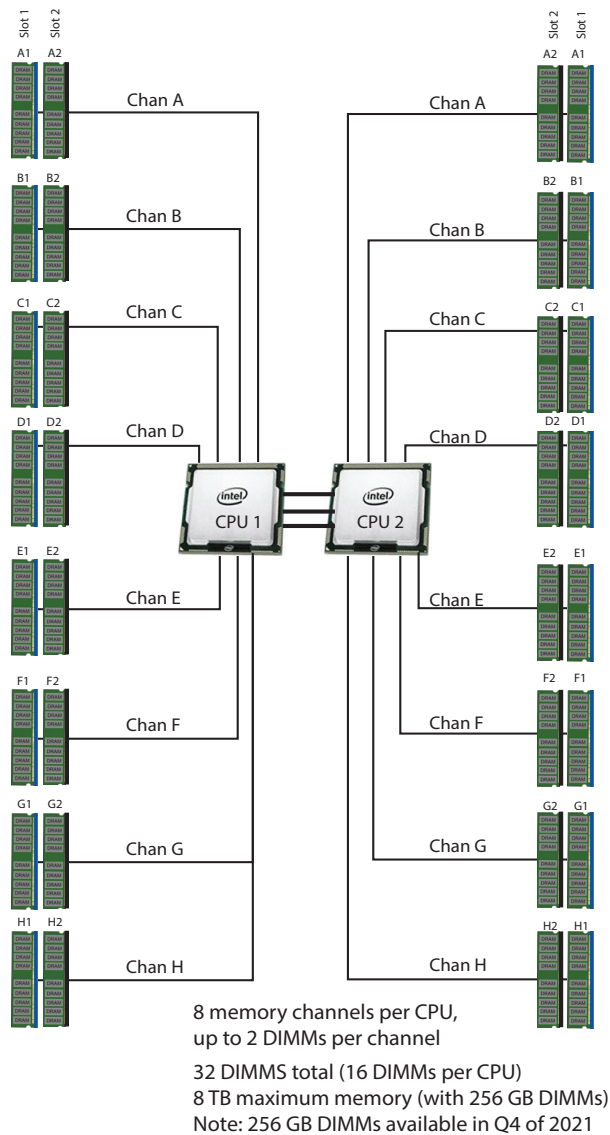

## STEP 4 SELECT MEMORY

The available memory for the C220 M6 SFF is as follows:

- Clock speed: 3200, 2933, or 2666 MHz depending on CPU speed
- Ranks per DIMM: 1, 2, 4, or 8
- Operational voltage: 1.2 V
- Registered ECC DDR4 DIMMs (RDIMMs), Load-reduced DIMMs (LR DIMMs), or Intel® Optane™ Persistent Memory Modules (PMEMs).

Memory is organized with eight memory channels per CPU, with up to two DIMMs per channel, as shown in [Figure 6](#).

**Figure 6 C220 M6 SFF Memory Organization**

## DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The supported memory DIMMs, DCPMMs, DCPMM Memory Mode, and the mirroring option are listed in [Table 6](#).

**NOTE:** When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

2. Any empty DIMM slot must be populated with a DIMM blank to maintain proper cooling airflow.
3. For more memory configuration details, please refer to and [UPGRADING or REPLACING CPUs, page 88](#).

## Memory Configurations, Features, and Modes

System speed is dependent on the CPU DIMM speed support. Refer to [Available CPUs, page 19](#) for DIMM speeds.

- The server supports the following memory reliability, availability, and serviceability (RAS) BIOS options (only one option can be chosen):
  - Adaptive Double Device Data Correction (ADDDC) (default)
  - Maximum performance
  - Full mirroring
  - Partial mirroring
- For best performance, observe the following:
  - When one DIMM is used, it must be populated in DIMM slot 1 (farthest away from the CPU) of a given channel.
  - When single- or dual-rank DIMMs are populated in two DIMMs per channel (2DPC) configurations, always populate the higher number rank DIMM first (starting from the farthest slot). For a 2DPC example, first populate with dual-rank DIMMs in DIMM slot 1. Then populate single-rank DIMMs in DIMM 2 slot.
- DIMMs for CPU 1 and CPU 2 (when populated) must always be configured identically.
- Cisco memory from previous generation servers (DDR3 and DDR4) is not compatible with the server.
- Memory can be configured in any number of DIMMs as pairs, although for optimal performance, see the following document

### [Cisco UCS C220/C240/B200 M6 Memory Guide](#)

**NOTE:** DIMM mixing is not allowed when PMEMs are installed; in these cases, all DIMMs must be the same type and size.

See the detailed mixing DIMM configurations at the following link

## STEP 5 SELECT DRIVE CONTROLLERS

The following list summarizes how drives are controlled on the server:

- Servers with SATA drives (only) are controlled by an Intel C621 PCH through the SATA Interposer (AHCI), or
- SAS/SATA drives are controlled through a Cisco 12G RAID Controller, or
- SAS/SATA drives are controlled through a Cisco 12G SAS pass-through HBA
- PCIe drives are controlled directly from the CPUs

### AHCI with SATA Interposer

The default configuration is Advanced Host Control Interface (AHCI), which supports SATA-only drives. A maximum of 8 SATA drives are supported with AHCI and this configuration requires a SATA interposer board, which plugs directly into the drive backplane. The SATA Interposer supports drives in slots 1-8.

**NOTE:** AHCI is limited to Windows and Linux operating systems only. There is no VMware support for AHCI.

### Cisco 12G SAS RAID Controller

This RAID controller supports up to 10 SAS or SATA drives operating at 3 Gbs, 6 Gbs, and 12 Gbs. It includes a SuperCap and a 4 GB flash-back write cache (FBWC) and supports RAID 0, 1, 5, 6, 10, 50, 60, JBOD mode, and SRAID0. The RAID controller plugs directly into a dedicated slot.

**NOTE:** 64 RAID groups (virtual drives) are supported with this RAID controller.

### Cisco 12G SAS HBA

This HBA supports up to 10 SAS or SATA drives operating at 3 Gbs, 6 Gbs, and 12 Gbs. It supports JBOD or pass-through mode (not RAID) and plugs directly into a dedicated slot.

### RAID Volumes and Groups

When creating each RAID volume, follow these guidelines:

- Use the same capacity for each drive in each RAID volume
- For the Cisco 12G SAS RAID controller, use either all SAS HDDs, or all SAS SSDs, or all SATA SSDs in each RAID volume

### Select RAID Controller Options

---

If you do not want the default AHCI 8 SATA-only drive setup (8 internal drives in drive bays 1-8 and 2 SATA M.2 drives), select one of the following:

- One Cisco 12G RAID controller (see [Table 10](#)), or
- One Cisco 12G SAS HBA (see [Table 10](#))

**NOTE:** The default solution is AHCI, which supports a limited number of drives, operating systems, and virtualized environments. For a more comprehensive solution, choose a controller from [Table 10](#).

<b>NOTE:</b> Cisco uses solid state drives from a number of vendors. All solid state drives are subject to physical write limits and have varying maximum usage limitation specifications set by the manufacturer. Cisco will not replace any solid state drives that have exceeded any maximum usage specifications set by Cisco or the manufacturer, as determined solely by Cisco.			

**Notes:**

- Operating Systems that support 4k sector size drives are as follows:
  - CentOS 7.9/8.2/8.3 (and later)
  - Windows Server 2016/2019 (and later)
  - Red Hat Enterprise Linux 7.9/8.2 (and later)
  - SUSE Linux Enterprise Server 15.2 (and later)
  - ESXi 6.7 U3/7.0 U2 (and later)
  - See this link for operating system guidance: <https://ucshcltool.cloudapps.cisco.com/public/>
  - UEFI Mode must be used when booting from 4K sector size drives (legacy mode is not supported).
  - Ensure that 4K sector size and 512 byte sector size drives are not mixed in the same RAID volume.
- Targeted for write centric IO applications. Supports endurance of 10 or 3 DWPD (drive writes per day). Target applications are caching, online transaction processing (OLTP), data warehousing, and virtual desktop infrastructure (VDI).
- Targeted for read centric IO applications. Supports endurance of 1 DWPD (drive write per day). Target applications are boot, streaming media, and collaboration.

**NOTE:** When configuring front facing drives with NVMe drives, you must order an NVMe cable (PID = CBL-FNVME-220M6) along with the drives.

**Caveats**

- With the UCSC-C220-M6S, you can choose only SATA HDDs when using AHCI with a SATA Interposer. The drives must be installed in slots 1-8.
- SFF NVMe drives are connected directly to CPU2 and not managed by any drive controller.
- You can mix HDDs and SSDs as long as you keep all HDDs in their own RAID volume and all SSDs in their own RAID volume.
- You can mix SAS HDDs and SAS/SATA SSDs when using the Cisco 12G RAID controller or Cisco 12G SAS controller.
- If you order any NVMe SFF drives, you must also order two CPUs.

- SFF NVMe drives are bootable in UEFI mode only.
- SED drives can be mixed with the non-SED drives in [Table 11 on page 34](#).

**Notes:**

1. HHHL = half-height, half-length; SS = single-slot; DS = double-slot
2. See [Table 17 on page 44](#) for compatible SmartNIC power cables.

**Approved Configurations****(1) 1-CPU Systems**

- You can select up to one of the PCIe option cards listed in [Table 12](#) to be installed in Riser 1. Riser 1 is controlled by CPU 1. Risers 2 and 3 are not installed in a 1-CPU system.

**(2) 2-CPU Systems**

- You can select up to two of the PCIe option cards listed in [Table 12](#) for a two-riser system (Riser 1 and Riser 2 installed) and up to three of the PCIe option cards for a three-riser system (Riser 1, Riser 2, and Riser 3 installed). Risers 1 and 2 are controlled by CPU 1 and riser 3 is controlled by CPU 2.

**Caveats**

- For 1-CPU systems:
  - Only Riser 1 is supported
  - Only a single plug-in PCIe VIC card is supported and must be installed in Riser 1. However, in addition to the one PCIe VIC card, you can also choose to install an mLOM VIC card in the mLOM slot at the rear of the chassis.
- For 2-CPU systems:

- All risers (Risers 1, 2, and 3) are supported
- Two plug-in PCIe VIC cards can be installed in 2-CPU systems, using risers 1 and 2. In addition, you can order an mLOM VIC card, which is installed in the mLOM slot at the rear of the chassis and thus have three VIC cards in operation at the same time. See [Table 12 on page 38](#) for the selection of plug-in and mLOM VIC cards. See also [Table 1 on page 12](#).
- To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the UCS C220 M6 server, but are not sold on the Cisco pricelist, check the Hardware Compatibility List at this URL: [http://www.cisco.com/en/US/products/ps10477/prod\\_technical\\_reference\\_list.html](http://www.cisco.com/en/US/products/ps10477/prod_technical_reference_list.html)

## STEP 9 ORDER GPU CARDS (OPTIONAL)

### Select GPU Options

The available GPU PCIe options are listed in [Table 18](#).

Table 18 Available PCIe GPU Cards<sup>1</sup>

Product ID (PID)	PID Description	Card Size	Maximum cards Per node
UCSC-GPU-T4-16	NVIDIA T4 PCIE 75W 16GB	HHHL, single-wide	3

Notes:

1. Refer to [https://www.cisco.com/content/en/us/td/docs/unified\\_computing/ucs/c/hw/c220m6/install/c220m6.html](https://www.cisco.com/content/en/us/td/docs/unified_computing/ucs/c/hw/c220m6/install/c220m6.html) for more details.

**NOTE:**

- All GPU cards must be procured from Cisco as there is a unique SBIOS ID required by CIMC and UCSM

### Caveats

- GPUs cannot be mixed.
- When one or more GPUs is selected, the server is configured with two CPUs and two full-height rear risers.
- A GPU can be installed in either full-height PCIe riser 1 or 2 (or both).

## STEP 10 ORDER POWER SUPPLY

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M6 C-series servers. Each power supply is certified for high-efficiency operation and offers multiple power output options. This allows users to “right-size” based on server configuration, which improves power efficiency, lowers overall energy costs and avoids stranded capacity in the data center. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

<http://ucspowercalc.cisco.com>

**Table 19 Power Supply**

Product ID (PID)	PID Description
UCSC-PSU1-1050W	1050W AC power supply for C-Series servers
UCSC-PSUV2-1050DC	1050W DC power supply for C-Series servers
UCSC-PSU1-1600W	1600W AC power supply for C-Series servers
UCSC-PSU-2300W <sup>1</sup>	2300W Power supply for C-series servers

**Notes:**

1. The 2300 W power supply uses a different power connector than the rest of the power supplies, so you must use different power cables to connect it. See [Table 20 on page 47](#) and [Table 21 on page 50](#).

**NOTE:** In a server with two power supplies, both power supplies must be identical.

## STEP 11 SELECT INPUT POWER CORD(s)

Using [Table 20](#) and [Table 21](#), select the appropriate AC power cords. You can select a minimum of no power cords and a maximum of two. If you select the option R2XX-DMYMPWRCORD, no power cord is shipped with the server.

**NOTE:** [Table 20](#) lists the power cords for servers that use power supplies less than 2300 W. [Table 21](#) lists the power cords for servers that use 2300 W power supplies. Note that the power cords for 2300 W power supplies use a C19 connector so they only fit the 2300 W power supply connector.

**Table 20 Available Power Cords (for server PSUs less than 2300 W)**

## STEP 12 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM

### Select a Tool-less Rail Kit

---

Select a tool-less rail kit from [Table 22](#).

Table 22 Tool-less Rail Kit Options

Product ID (PID)	PID Description
UCSC-RAIL-M6	Ball Bearing Rail Kit for C220 and C240 M6 rack servers

### Select an Optional Reversible Cable Management Arm

---

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Use [Table 23](#) to order a cable management arm.

Table 23 Cable Management Arm

Product ID (PID)	PID Description
UCSC-CMA-C220M6	Reversible CMA for C220 M6 ball bearing rail kit

For more information about the tool-less rail kit and cable management arm, see the *Cisco UCS C220 M6 Installation and Service Guide* at this URL:

[https://www.cisco.com/content/en/us/td/docs/unified\\_computing/ucs/c/hw/c220m6/install/c220m6.html](https://www.cisco.com/content/en/us/td/docs/unified_computing/ucs/c/hw/c220m6/install/c220m6.html)

**NOTE:** If you plan to rackmount your UCS C220 M6 server, you must order a tool-less rail kit. The same rail kits and CMAs are used for M5 and M6 servers.

---

## STEP 13 SELECT MANAGEMENT CONFIGURATION (OPTIONAL)

By default, the C220 M6 server NIC mode is configured to be Shared LOM Extended. This NIC mode allows any LOM port or adapter card port to be used to access the Cisco Integrated Management Controller (CIMC). The Cisco VIC card must be installed in a slot with NCSI support.

To change the default NIC mode to Dedicated, select the UCSC-DLOM-01 PID shown in [Table 24](#). In Dedicated NIC mode, the CIMC can be accessed only through the dedicated management port. See [Chassis Rear View \(two full-height, 3/4-length PCIe risers\), page 11](#) for the location of the management port.

To change the default NIC mode to Cisco Card Mode, select the UCSC-CCARD-01 PID shown in [Table 24](#). In this mode, you can assign an IP address to the CIMC using DHCP and from there you can fully automate your deployment.

For more details on all the NIC mode settings, see

[https://www.cisco.com/c/en/us/td/docs/unified\\_computing/ucs/c/hw/C480M5/install/C480M5/C480M5\\_chapter\\_010.html#concept\\_srj\\_vsr\\_fz](https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C480M5/install/C480M5/C480M5_chapter_010.html#concept_srj_vsr_fz)

Product ID (PID)	PID Description
UCSC-DLOM-01	Dedicated Mode BIOS setting for C-Series Servers
UCSC-CCARD-01	Cisco Card Mode BIOS setting for C-Series Servers

## STEP 14 SELECT SERVER BOOT MODE (OPTIONAL)

By default, the C220 M6 SFF server ships with UEFI as the default boot mode. To have a server shipped with the Legacy BIOS mode (which was standard on M4 and previous generation servers), select the Legacy BIOS PID from [Table 25](#).

Table 25 Server Boot Mode Ordering Information

Product ID (PID)	PID Description
UCSC-LBIOS-01	Legacy Boot Mode BIOS setting for C-Series Servers

## STEP 15 ORDER SECURITY DEVICES (OPTIONAL)

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server.

The security device ordering information is listed in [Table 26](#).

**Table 26 Security Devices**

Product ID (PID)	PID Description
UCSX-TPM-002C	Trusted Platform Module 2.0 for UCS servers
UCSC-INT-SW02	C220 and C240 M6 Chassis Intrusion Switch
UCSX-TPM-OPT-OUT	OPT OUT, TPM 2.0, TCG, FIPS140-2, CC EAL4+ Certified <sup>1</sup>

**Notes:**

1. Please note that Microsoft certification requires a TPM 2.0 for bare-metal or guest VM deployments. Opt-out of the TPM 2.0 voids the Microsoft certification

**NOTE:**

- The TPM module used in this system conforms to TPM v1.2 and 2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.
- TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.

## STEP 16 SELECT LOCKING SECURITY BEZEL (OPTIONAL)

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel from [Table 27](#).

Table 27 Locking Bezel Option

Product ID (PID)	Description
UCSC-BZL-C220M5	C220 M5 Security Bezel

## STEP 17 ORDER M.2 SATA SSDs (OPTIONAL)

Order two matching M.2 SATA SSDs along with a boot-optimized RAID controller. See [Figure 8 on page 66](#) for the location of the module connector on the motherboard. This connector accepts the boot-optimized RAID controller (see [Table 29](#)). Each boot-optimized RAID controller can accommodate two SATA M.2 SSDs shown in [Table 28](#).

**NOTE:** It is recommended that M.2 SATA SSDs be used as boot-only devices.

Table 28 M.2 SATA SSDs

Product ID (PID)	PID Description
UCS-M2-240GB	240 GB M.2 SATA SSD
UCS-M2-960GB	960 GB M.2 SATA SSD

Order the UCS-M2-HWRAID Boot-Optimized RAID controller from [Table 29](#) for hardware RAID across the two SATA M.2 drives. The Boot-Optimized RAID controller plugs into a connector on the motherboard and holds 2 M.2 SATA drives.

**NOTE:** The Boot-Optimized RAID controller supports VMWare, Windows and Linux Operating Systems

Table 29 Mini Storage Carrier/Boot-Optimized RAID Controller

Product ID (PID)	PID Description
UCS-M2-HWRAID	Cisco Boot optimized M.2 RAID controller (holds 2 M.2 SATA SSDs)

**NOTE:**

- The UCS-M2-HWRAID boot-optimized RAID controller supports RAID 1 and JBOD mode
- The UCS-M2-HWRAID controller is available only with 240 GB and 960 GB M.2 SSDs.
- CIMC/UCSM is supported for configuring of volumes and monitoring of the controller and installed SATA M.2 drives
- The minimum version of Cisco IMC and Cisco UCS Manager that supports this controller is 4.2(1) and later. The name of the controller in the software is MSTOR-RAID
- The SATA M.2 drives can boot in UEFI mode only. Legacy boot mode is not supported
- Hot-plug replacement is not supported. The server must be powered off.
- The boot-optimized RAID controller is not supported when the server is used as a compute node in HyperFlex configurations

---

**Caveats**

- Order two identical M.2 SATA SSDs for the boot-optimized RAID controller. You cannot mix M.2 SATA SSD capacities.

### Serial Port (RJ-45 Female Connector)

KVM Cable

The KVM cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.

The KVM cable ordering information is listed in [Table 34](#).

## Memory Support for 3rd Generation Intel® Xeon® Scalable Processors (Ice Lake)

### PMEM Support

The Ice Lake CPUs support two memory modes:

- App Direct Mode
- Memory Mode

### App Direct Mode

PMEM operates as a solid-state disk storage device. Data is saved and is non-volatile. Both DCPMM and DIMM capacities count towards the CPU capacity limit.

For example, if App Direct mode is configured and the DIMM sockets for a CPU are populated with 8 x 256 GB DRAMs (2 TB total DRAM) and 8 x 512 GB PMEMs (4 TB total PMEM), then 6 TB total counts towards the CPU capacity limit. Follow the Intel recommended DRAM:PMEM ratio for App Direct Mode.

### Memory Mode

PMEM operates as a 100% memory module. Data is volatile and DRAM acts as a cache for PMEMs. Only the PMEM capacity counts towards the CPU capacity limit. This is the factory default mode.

For example, if Memory mode is configured and the DIMM sockets for a CPU are populated with 8 x 256 GB DRAMs (2 TB total DRAM) and 8 x 512 GB PMEMs (4 TB total PMEM), then only 4 TB total (the PMEM memory) counts towards the CPU capacity limit. All of the DRAM capacity (2 TB) is used as cache and does not factor into CPU capacity. The recommended Intel DRAM:PMEM ratio for Memory Mode is 1:2, 1:4, 1:8, or 1:16.

For 3<sup>rd</sup> Generation Intel® Xeon® Scalable Processors (Ice Lake):

- DRAMs and PMEMs are supported
- Each CPU has 16 DIMM sockets and supports the following maximum memory capacities:
  - 4 TB using 16 x 256 GB DRAMs, or
  - 6 TB using 8 x 256 GB DRAMs and 8 x 512 GB Intel® Optane™ Persistent Memory Modules (PMEMs)

Only the following mixed DRAM/PMEM memory configurations are supported per CPU socket:

- 4 DRAMs and 4 PMEMs, or 8 DRAMs and 4 PMEMs, or 8 DRAMs and 1 PMEM, or 8 DRAMs and 8 PMEMs

The available DRAM capacities are 32 GB, 64 GB, 128 GB, or 256 GB.

The available PMEM capacities are 128 GB, 256 GB, or 512 GB

## SPARE PARTS

This section lists the upgrade and service-related parts for the UCS C220 M6 server. Some of these parts are configured with every server.

**NOTE:** Some spare parts you order may also require accessories for full functionality. For example, drives or RAID controllers may need accompanying cables. CPUs may need heatsinks, thermal paste, and installation tools. The spares and their accessory parts are listed in [Table 35](#).

## UPGRADING or REPLACING MEMORY

**NOTE:** Before servicing any DIMM or PMEM, do the following:

- Decommission and power off the server.
- Remove the top cover from the server
- Slide the server out the front of the chassis.

To add or replace DIMMs or PMEMs, follow these steps:

Step 1 Open both DIMM connector latches.

Step 2 Press evenly on both ends of the DIMM until it clicks into place in its slot

Note: Ensure that the notch in the DIMM aligns with the slot. If the notch is misaligned, it is possible to damage the DIMM, the slot, or both.

Step 3 Press the DIMM connector latches inward slightly to seat them fully.

Step 4 Populate all slots with a DIMM or DIMM blank. A slot cannot be empty.

2. This is the minimum rating required to achieve 80 PLUS Titanium certification, see test reports published at <http://www.80plus.org/> for certified values
3. Time output voltage remains within regulation limits at 100% load, during input voltage dropout

## Environmental Specifications

The environmental specifications for the C220 M6 server are listed in [Table 41](#).

**Table 41 UCS C220 M6 SFF Environmental Specifications**

Parameter	Minimum
Operating Temperature	10° C to 35° C (50° F to 95° F) with no direct sunlight Maximum allowable operating temperature derated 1° C/300 m (1° F/547 ft) above 950 m (3117 ft)
Non-Operating Temperature	Below -40° C or above 65° C (below -40° F or above 149° F) Maximum rate of change (operating and non-operating) 20° C/hr (36° F/hr)
Extended Operating Temperature	5° C to 40° C (41° F to 104° F) with no direct sunlight Maximum allowable operating temperature derated 1° C/175 m (1° F/319 ft) above 950 m (3117 ft)  5° C to 45° C (41° F to 113° F) with no direct sunlight Maximum allowable operating temperature derated 1° C/125 m (1° F/228 ft) above 950 m (3117 ft)  System performance may be impacted when operating in the extended operating temperature range.  Operation above 40° C is limited to less than 1% of annual operating hours.  Hardware configuration limits apply to extended operating temperature range.
Operating Relative Humidity	8% to 90% and 24° C (75° F) maximum dew-point temperature, non-condensing environment
Non-Operating Relative Humidity	Below 5% or above 95% and 33° C (91° F) maximum dew-point temperature, non-condensing environment
Operating Altitude	0 m to 3050 m (10,000 ft)
Non-Operating Altitude	Below 0 m or above 12,000 m (39,370 ft)
Sound Power level, Measure A-weighted per ISO7779 LWAd (Bels) Operation at 73° F (23° C)	5.8
Sound Pressure level, Measure A-weighted per ISO7779 LpAm (dBA) Operation at 73° F (23° C)	43
