

European back box & render trim

INSTRUCTIONS

INCLUDED

Back box
(screws supplied
inside) x1

Divider x1

Cover x1

If purchased:
render trim x1

These back boxes are specially designed by us to go with our Kew range of flush plates, meaning they have a unique installation process. This guide is therefore not suitable for use with standard European back boxes.

TOOLS YOU'LL NEED

Spirit level

Rule

Drill

brick hole saw
(36892 / 37735)

16, 22 or 25mm drill bit
(for conduit holes)

Screwdriver

Pliers

Plaster saw or wall chaser

Remover tool
(33480)

Nails and hammer or
permanent adhesive

Wall finishing
equipment

European back box & render trim instructions

Draw a horizontal line on the wall.

Plasterboard: line the box up with the line and push against it, allowing the spikes to impress on the wall.

Brick wall: measure and mark the distance specified.

Using the markings as centrepieces, drill 71mm holes in the wall.

Remove excess wall between the holes.

European back box & render trim instructions

Remove the back box cover and drill out the conduit holes.

If using a trim, fit the trim onto the box.

Plasterboard: push the box into the hole and screw in.

Brick wall: secure the box into the hole, for example with adhesive, or by nailing the trim down.

Put the back box cover back on.

Finish the wall as required.

European back box & render trim instructions

10

Remove the cover and the central screws.

11

Install the divider.

12

Make electrical connections to wire in the modules.

13

Screw in the modules.
