

Traffic Mirroring Commands

Note All commands applicable for the Cisco NCS 5500 Series Router are also supported on the Cisco NCS 540 Series Router that is introduced from Cisco IOS XR Release 6.3.2. References to earlier releases in Command History tables apply to only the Cisco NCS 5500 Series Router.

- Note**
- Starting with Cisco IOS XR Release 6.6.25, all commands applicable for the Cisco NCS 5500 Series Router are also supported on the Cisco NCS 560 Series Routers.
 - Starting with Cisco IOS XR Release 6.3.2, all commands applicable for the Cisco NCS 5500 Series Router are also supported on the Cisco NCS 540 Series Router.
 - References to releases before Cisco IOS XR Release 6.3.2 apply to only the Cisco NCS 5500 Series Router.
 - Cisco IOS XR Software Release 7.0.1 specific updates are not applicable for the following variants of Cisco NCS 540 Series Routers:
 - N540-28Z4C-SYS-A
 - N540-28Z4C-SYS-D
 - N540X-16Z4G8Q2C-A
 - N540X-16Z4G8Q2C-D
 - N540-12Z20G-SYS-A
 - N540-12Z20G-SYS-D
 - N540X-12Z16G-SYS-A
 - N540X-12Z16G-SYS-D

This module provides command line interface (CLI) commands for configuring traffic monitoring interfaces.

- [clear monitor-session counters, on page 3](#)
- [destination interface, on page 4](#)

- [mirror first](#), on page 5
- [monitor-session](#), on page 6
- [monitor-session \(interface\)](#), on page 7
- [monitor session ERSPAN ACL](#), on page 9
- [show monitor-session status](#), on page 11

clear monitor-session counters

To clear the traffic mirroring session statistics, use the **clear monitor-session counters** command in EXEC mode.

clear monitor-session counters [*session-name*] [**interface** *type* *interface-path-id*]

Syntax Description

interface	Identifies the interface for which the counters are to be cleared.
<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	Physical interface or virtual interface.
Note	Use the show interfaces command to see a list of all interfaces currently configured on the router.
	For more information about the syntax for the router, use the question mark (?) online help function.
<i>session-name</i>	Name of the monitor session to clear.

Command Default

All stored statistics for all interfaces are cleared.

Command Modes

EXEC

Command History

Release	Modification
Release 6.1.1	This command was introduced.

Usage Guidelines

No specific guidelines impact the use of this command.

Task ID

Task ID	Operations
interface	read

Examples

This example shows how to clear the traffic mirroring statistic counters:

XR EXEC mode

```
clear monitor-session mon1 counters
```

destination interface

To associate a destination interface with a traffic mirroring session, use the **destination interface** command in monitor session configuration mode. To remove the designated destination, use the **no** form of this command.

destination interface *type interface-path-id*
no destination interface *type interface-path-id*

Syntax Description	<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
	<i>interface-path-id</i>	Physical interface or virtual interface.
	Note	Use the show interfaces command to see a list of all interfaces currently configured on the router.
		For more information about the syntax for the router, use the question mark (?) online help function.
Command Default	No default behavior or values	
Command Modes	Monitor sessions configuration	
Command History	Release	Modification
	Release 6.1.1	This command was introduced.
Usage Guidelines	Use the destination interface command to assign a traffic monitoring session to a specific destination interface. This is the port to which a network analyzer is connected. This is generally called the monitoring port. A destination port has these characteristics: • A destination port must reside on the same switch as the source port. • A destination port can be any Ethernet physical port, nV Satellite ICL port, or EFP, but not a bundle interface. Also, the ICL must not be a bundle interface. • At any one time a destination port can participate in only one traffic mirroring session. A destination port in one traffic mirroring session cannot be a destination port for a second traffic mirroring session. In other words, no two monitor sessions can have the same destination port. • A destination port cannot also be a source port.	

Examples

This example shows how to configure a monitoring port for a traffic mirroring session:

```
RP/0/RP0/CPU0:router(config)# monitor-session mon1
RP/0/RP0/CPU0:router(config-mon)# destination interface gigabitethernet0/0/0/15
```

mirror first

To configure partial traffic mirroring, use the **mirror first** command in monitor session configuration mode. To stop mirroring a portion of the packet, use the **no** form of this command.

mirror first *bytes*

Syntax Description	<i>bytes</i> Number of bytes mirrored. The mirrored packet length value can range from 65 to 128.	
Command Default	The entire packet is mirrored.	
Command Modes	Monitor session configuration	
Command History	Release	Modification
	Release 6.1.1	This command was introduced.
Usage Guidelines	To mirror the first 64 to 128 bytes of the packet, use the mirror first command. The actual mirrored packet is the configured partial packet monitoring size plus the 4-byte trailing CRC.	
Examples	This example shows how to mirror the first 100 bytes of the packet:	

monitor-session

To define a traffic mirroring session and enter monitor session configuration mode, use the **monitor-session** command in global configuration mode. To remove the traffic mirroring session, use the **no** form of this command.

monitor-session *session-name*
no monitor-session *session-name*

Syntax Description	<i>session-name</i> Name of the monitor session to configure.
---------------------------	---

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	Global configuration mode
----------------------	---------------------------

Command History	Release	Modification
	Release 6.1.1	This command was introduced.

Usage Guidelines	Before you can assign a monitor session to a specific interface, you must configure it using the monitor-session command. The <i>session-name</i> should not be the same as any interface name.
-------------------------	--

In monitor session configuration mode, you should define the destination interface to be used in the traffic mirroring session using the **destination** command.

This commands triggers entry in to the monitor-session sub-mode and creates the session. The session will be non-operable until a destination is configured for the session. The destination can be either IPv4 or IPv6.

Examples

This example shows how to enter monitor session configuration mode:

```
RP/0/RP0/CPU0:router(config)# monitor-session mon1
RP/0/RP0/CPU0:router(config-mon)#
```

monitor-session (interface)

To associate a traffic mirroring session with a specific interface, use the **monitor-session** command in interface configuration mode or dynamic-template configuration mode. To remove the association between a traffic mirroring session and an interface, use the **no** form of this command.

```
monitor-session session name ethernetport-level [direction {rx-only | tx-only}]
traffic class {0-7}
discard class {0-7}
no monitor-session session-name port-level [direction {rx-only | tx-only}] [traffic class {0-7}] [discard class {0-7}]
```

Syntax Description

<i>session-name</i>	Name of the monitor session to configure.
port-level	Specifies port-level mirroring.
direction	Specifies that traffic replication is in only one direction.
rx-only	Specifies that only ingress traffic is replicated.
tx-only	Specifies that only egress traffic is replicated.

Command Default

Replicates both ingress and egress traffic.

Command Modes

Interface configuration

Command History

Release	Modification
Release 6.1.1	This command was introduced.

Usage Guidelines

Before you can associate a traffic mirroring session to a specific interface, you must define it using the **monitor-session** global configuration command. After the traffic mirroring session is defined, use the **monitor-session** interface configuration command to associate this session with a specific source interface. When the session is associated, all specified traffic on the interface is then replicated to the destination location defined in the monitor session configuration.

The **monitor-session** interface configuration command also enters monitor session configuration mode for you to configure additional features of the mirroring session.

Task ID

Task ID	Operations
interface	read, write
config-services	read, write

Examples

This example shows a sample configuration of the **monitor-session** command in the interface configuration mode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface gigabitethernet0/0/0/11
RP/0/RP0/CPU0:router(config-if)# monitor-session mon1 port-level direction rx-only
RP/0/RP0/CPU0:router(config-if-mon)#
```

monitor session ERSPAN ACL

This command defines a monitor session, and enters monitor session configuration mode.

monitor-session **ERSPAN** **nethernet** **direction** {*rx-only* | *port-level* | *acl*}

Syntax Description

ERSPAN Name of the session.

ethernet Replicates Ethernet traffic.

direction Use the direction keyword to specify that only ingress or egress traffic is mirrored.

monitor-session session-name [direction { rx-only | tx-only }]

rx-only Specifies that only ingress traffic is mirrored.

port-level Use this port level command to mirror all traffic types.

acl The ACL that is attached in the ingress interface.

- Even when the acl command is configured on the source mirroring port, if the ACL configuration command does not use the capture keyword, no traffic gets mirrored.
- If the ACL configuration uses the capture keyword, but the acl command is not configured on the source port, although traffic is mirrored, no access list configuration is applied.
- All ingress traffic is mirrored.

Command Default

No default behavior or values

Command Modes

Route-policy configuration

Command History

Release	Modification
Release 6.6.1	This command was introduced.

Usage Guidelines

Task ID

Task ID	Operations
route-policy	read, write

Examples

```
RP/0/RP0/CPU0: pyke-008#sh run monitor-session ERSPAN
monitor-session ERSPAN ethernet
destination interface tunnel-ip1
!
```

```
RP/0/RP0/CPU0:pyke-008#sh run int tunnel-ip 1
interface tunnel-ip1
ipv4 address 4.4.4.1 255.255.255.0
tunnel mode gre ipv4
```

```
tunnel source 20.1.1.1  
tunnel destination 20.1.1.2  
!
```

show monitor-session status

To display status information about configured traffic mirroring sessions, use the **show monitor-session status** command in XR EXEC mode.

show monitor-session [*session-name*] **status** [**detail**] [**errors**]

Syntax Description	<i>session-name</i> Name of the monitor session to configure. detail Displays the full error string for any errors. errors Displays all sessions, but only source interfaces with errors are displayed (if no source interfaces have errors, then 'No errors' is displayed).				
Command Default	No default behavior or values				
Command Modes	XR EXEC mode				
Command History	<table> <tr> <th>Release</th><th>Modification</th></tr> <tr> <td>Release 6.1.1</td><td>This command was introduced.</td></tr> </table>	Release	Modification	Release 6.1.1	This command was introduced.
Release	Modification				
Release 6.1.1	This command was introduced.				
Usage Guidelines	The show monitor-sessions status command displays the following information: • Destination information for the session (including the name of the interface). • Destination status (interface state). • List of source interfaces. • Any other status information that may be pertinent, such as a software or hardware error that would stop sessions operating correctly. If an error is returned from interactions with another component, then the full error string is only displayed in detail output; standard tabular output reports that there has been an error but refers the user to the detailed output.				

Examples

This example shows sample output from the **show monitor-session status** command:

```
RP/0/RP0/CPU0:router# show monitor-session status
```

```
Monitor-session foo
Destination interface GigabitEthernet 0/0/0/0
```

```
=====
Source Interface      Dir      Status
-----
Gi0/1/0/0.10         Both     Operational
Gi0/1/0/0.11         Rx       Operational
Gi0/1/0/0.12         Tx       Operational
```

This example shows the sample output for the **show monitor-session status detail** command:

```
RP/0/RP0/CPU0:router show monitor-session status detail
```

```
Monitor-session foo
```

```
Destination interface GigabitEthernet 0/0/0/0
Source Interfaces
-----
GigabitEthernet 0/1/0/0.100:
  Direction: Both
  Status:    Operating
GigabitEthernet 0/2/0/0.200:
  Direction: Rx
  Status:    Error: <blah>

Monitor session bar
No destination configured
Source Interfaces
-----
GigabitEthernet 0/3/0/0.100:
  Direction: Rx
  Status:    Not operational(no destination interface)
```
