

Use and Care Manual

Load bearing limit: Please strictly follow the maximum load bearing limit stated in the product instructions. Overweight use may cause deformation, loosening, or damage to the bracket, leading to safety accidents. When placing items on the shelf, please try to evenly distribute the weight to avoid uneven force on the support due to single point overweight.

Child safety: Ensure that children cannot climb or play on shelves and their supports to prevent accidental falls.

Clean: Wipe the surface of the bracket with a soft dry cloth to remove dust and stains. Avoid using cleaning agents containing corrosive chemicals to prevent damage to the coating on the surface of the bracket.

Check: Regularly check the tightness and stability of the bracket, especially during installation and after experiencing severe vibrations (such as earthquakes). If loose screws are found, they should be immediately tightened with appropriate tools to ensure the stability of the bracket.

Storage: Try to keep the shelves and their supports dry and avoid prolonged exposure to humid environments to prevent rusting and corrosion.
