2. Blade lever adjustable
3. ON/OFF switch
4. LED display
5. Cutting guide combs for hair clipper (1.5/3/4.5/6/10/13/16/19mm)
6. Protection cap for hair clipper
7. USB line
8. Cleaning brush

Charge

The charging input of this product is 5V $\overline{\text{---}}$ 1A. When connecting the power supply, please pay attention to the output of the power supply!

When charging, the digital display lights up from bottom to top, it takes 120 minutes to fully charge, and number 100 is displayed. When fully charged, it can be used for about 180 minutes.

Display description

Electricity percentage: 00/05/10/.../90//95/100%

When charging, increase in sequence; when in use, decrease in sequence; when 05 flashes, it reminds you to charge; when 00, the battery is exhausted and shut down.

The oil bottle symbol:

which has been used for 30 minutes in total, appears and flashes to remind you to refuel

Lock symbol:

Long press the switch for 3-5 seconds to lock the travel lock; long press the switch for 3-5 seconds or connect to the power supply to unlock the product.

Mount the limit comb:

- 1.Align the limit comb with the blade edge.
- 2.Slightly forward push to mount it. Disassemble the limit comb: Just pull hard the limit comb.

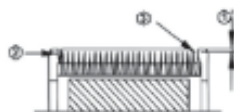

Cutter assembly and disassembly

Sketch shows how the bottom blade holes are larger than the shanks of the blades screws. When the blade screws are loosened the bottom blade can be aligned with light after the blade is aligned.

- 1.End of the top blade teeth should be $1/32''$ to $5/64''$, 0.79mm to 1.98mm back from bottom blade. This is important so that the clipper doesn't cut too close or allow the moving cutting to touch the skin.

- 2.Extreme left hand tooth of top blade must be covering or be to the left of the first small tooth of bottom blade.

- 3.Extreme right hand tooth of top blade must be touching the big tooth on the bottom blade.

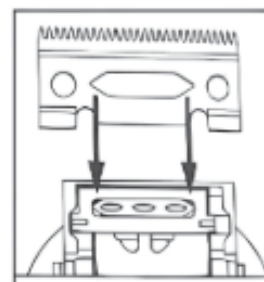

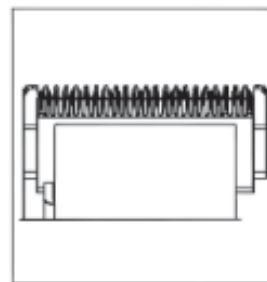

Taper lever

Some clippers are equipped with an adjustable taper lever that changes the closeness of your cut. When the lever is in the uppermost position, the blades will give the closest cut. Pushing the lever down gradually increases the cutting length.

Cutter cleaning and maintenance

Blade alignment

Your clipper were carefully examined to ensure that the blades were oiled and aligned before leaving our factory. Blades must be realign if they have been removed for cleaning or replacement.

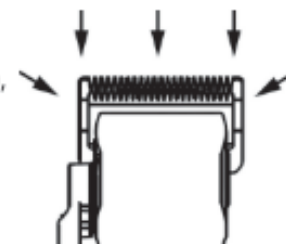

To realign the blades, simply match the upper and bottom blades teeth up, point for point (End of top blade teeth should be approximately 0.5-1.0mm back from bottom blade. Compare your clipper blades with the sketch)

If blade alignment is incorrect, add a few drops of oil to the blade, turn clipper on for a few moments, turn off and unplug. Loosen screws slightly and adjust. Tighten screws after blade is aligned.

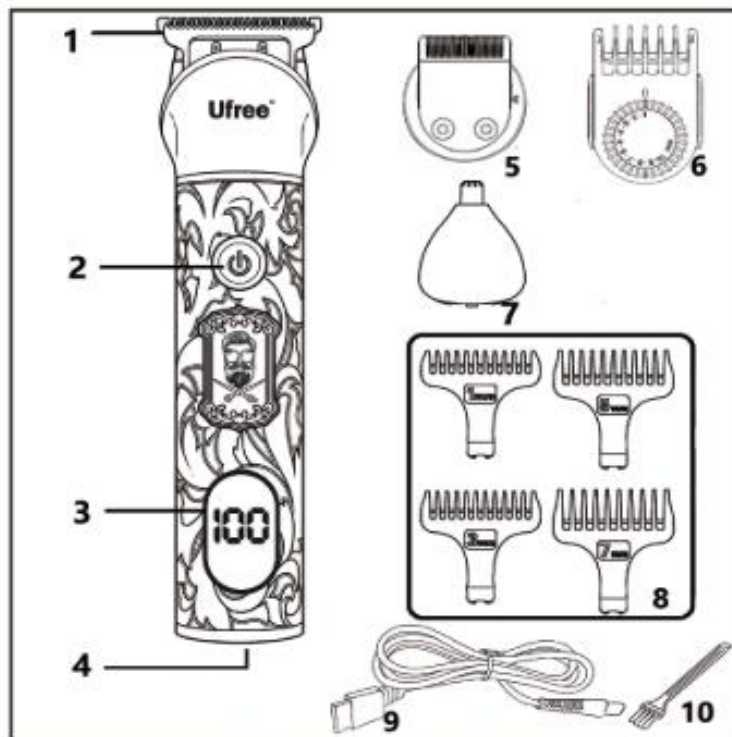

Cutter maintenance

To maintain your clipper in peak condition, the blades should be oiled every few haircuts.

To oil it properly, the unit should be held so the blades are in a download position. With the clipper blade running, dispense 2-3 drops of oil across the top blade.

PROFESSIONAL HAIR CLIPPERS ZERO GAPPED CORDLESS HAIR TRIMMER & GROOMING KIT
