## **INSTRUCTIONS:**

1. Download the necessary E-Lavender 2 G-Code files by visiting [www.zhepcub.com/e-lavender2](http://www.zhepcub.com/e-lavender2) and saving the E-Lavender 2 Files to your computer.
2. Open the file and choose the sub-folder that most closely matches your printer's bed size (does not need to be an Ender printer). Copy the G-Code files inside the selected folder to your printer's SD card.
3. Insert the SD card into your printer and run the E-Lavender gcode file just like you would any other 3D print. The print nozzle will home itself and then move to the front left corner of the print bed.
4. Position the E-Lavender under the nozzle (do not touch the bed or nozzle).
5. Adjust the bed until the E-Lavender LED just begins to turn on.
6. After 20 seconds, the G-Code will automatically move the nozzle to the rear position (left rear).
7. Again, position the E-Lavender under the nozzle and adjust the bed until the E-Lavender LED just begins to turn on.
8. Repeat these steps until all 4 corners of the bed have been leveled. The G-Code file will then return the nozzle to its home position.
9. Now that the bed has been leveled, run the Squares-Test gcode file to verify the bed is level.
10. Review the Squares-Test print. If the print does not look even, repeat the leveling process.

## **DO NOT RETURN THIS PRODUCT TO AMAZON**
