## AV SURROUND RECEIVER

# AVR-2500

## OPERATING INSTRUCTIONS

The photograph shows the AVR-2500 (black).  
(without side panel (gray))

Manufactured under license from Dolby Laboratories Licensing Corporation. Additionally licensed under Canadian patent number 1,007,677. "Dolby," "Pro Logic," and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

- We greatly appreciate your purchase of the AVR-2500.
- To be sure you take maximum advantage of all the features the AVR-2500 has to offer, read these instructions carefully and use the set properly. Be sure to keep this manual for future reference should any questions or problems arise.

"SERIAL NO. \_\_\_\_\_"

PLEASE RECORD UNIT SERIAL NUMBER ATTACHED TO THE REAR OF THE  
CABINET FOR FUTURE REFERENCE"

### ★ ACCESSORIES

Check that the following parts are included in addition to the main unit:

① Operating instructions .....	② Dummy (for 4-pin) car stereo cable .....	③ Remote control .....	④ Antenna wire .....	⑤ FM antenna .....
⑥ Remote control .....				

## 1 INTRODUCTION

### SAFETY PRECAUTIONS

**CAUTION**

**RISK OF ELECTRIC SHOCK**

**DO NOT OPEN**

**CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.**

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation mark within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

**WARNING: TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.**

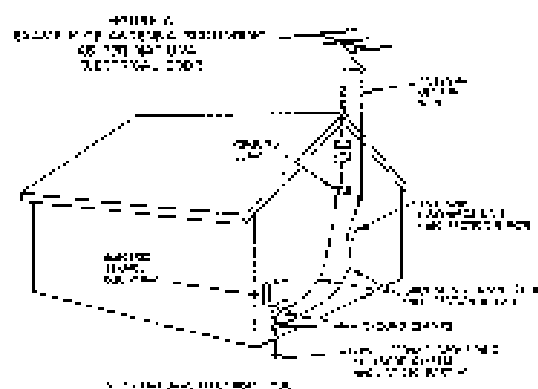

CAUTION	ATTENTION
TO PREVENT ELECTRIC SHOCK DO NOT USE THE PLUGGED-PLUG WITH AN EXTENSION CORD, RECEPTACLE OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.	POUR PREVENIR LES CHOCs ELECTRIQUES NE PAS UTILISER CORDON A PLOCH, PLOCHIER, BOITE A PLOCHS OU AUTRE PRISE DE COURANT OU UNE AUTRE SORTIE DE L'ENERGIE, SAUF SI LES LAMES PEUVENT ETRE INSEREES A FOND SANS EXPOSITION DES LAMES.

## SAFETY INSTRUCTIONS

1. **Read Instructions** - All the safety and operating instructions should be read before the appliance is connected.
2. **Retain Instructions** - The safety and operating instructions should be retained for future reference.
3. **Read Warnings** - All warnings on the appliance and in the operating instructions should be heeded.
4. **Follow Instructions** - All operating and use instructions should be followed.
5. **Water and Moisture** - The appliance should not be used near water - for example, near a bathtub, washbowl, kitchen sink, laundry tub, in a wet basement, or near a swimming pool, and the like.
6. **Cords and Stands** - The appliance should be used only with a cord or stand that is recommended by the manufacturer.
7. **Appliance and Cart Combination** - An appliance and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the appliance and cart combination to overturn.
8. **Wall or Ceiling Mounting** - The appliance should be mounted in a wall or ceiling only as recommended by the manufacturer.
9. **Ventilation** - The appliance should be situated so that its location or position does not interfere with its proper ventilation. For example, the appliance should not be located on a bed, sofa, rug, or similar surface that may block the ventilation openings; or placed in a built-in installation, such as a bookcase or cabinet that may impede the flow of air through the ventilation openings.
10. **Heat** - The appliance should be situated away from heat sources such as radiators, heat registers, stoves, or other appliances (including amplifiers) that produce heat.
11. **Power Sources** - The appliance should be connected to a power supply only of the type described in the operating instructions or as marked on the appliance.
12. **Grounding or Polarization** - Precautions should be taken so that the grounding or polarization features of an appliance is not defeated.

12. **Power-Cord Protection** – Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at steps, convenience receptacles, and the point where they exit from the appliance.
13. **Cleaning** – The appliance should be cleaned only as recommended by the manufacturer.
14. **Power Lines** – An outdoor antenna should be located away from power lines.
15. **Outdoor Antenna Grounding** – If an outside antenna is connected to the receiver, be sure the antenna system is grounded so as to provide some protection against voltage surges and built-up static charges. Article §10 of the National Electrical Code, ANSI/NFPA 70, provides information with regard to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna-discharge unit, size of grounding conductors, location of antenna-discharge unit, connection to grounding electrode, and requirements for the grounding electrode. See Figure A.
16. **Unuse Periods** – The power cord of the appliance should be unplugged from the outlet when left unused for a long period of time.
17. **Object and Liquid Entry** – Care should be taken so that objects do not fall and liquids are not spilled into the enclosure through openings.
18. **Damage Requiring Service** – The appliance should be serviced by qualified service personnel when:
  - A. The power supply cord or the plug has been damaged; or
  - B. Objects have fallen on, or liquid has been spilled into the appliance; or
  - C. The appliance has been exposed to rain; or
  - D. The appliance does not appear to operate normally or exhibits a marked change in performance; or
  - E. The appliance has been dropped, or the enclosure damaged.
19. **Servicing** – The user should not attempt to service the appliance beyond that described in the operating instructions. A further servicing should be referred to qualified service personnel.

## • NOTE ON USE

- Avoid high temperatures.  
Allow for sufficient heat dissipation when installed on a rack.

- Handle the power cord carefully.  
Hold the plug when unplugging the cord.

- Keep the set free from moisture, water, and dust.

- Unplug the power cord when not using the set for long periods of time.

- (For sets with ventilation holes)  
Do not obstruct the ventilation holes.

- Do not let foreign objects in the set.

- Do not let insecticides, benzene, and thinner come in contact with the set.

- Never disassemble or modify the set in any way.

## • INSTALLATION PRECAUTIONS

Using this receiver or other electronic equipment containing a car receiver simultaneously with a tuner or TV may result in noise in the sound or picture.

If this should happen, take the following steps:

- Install the receiver as far as possible from the tuner or TV set.
- Keep the antenna line of the tuner or TV as far as possible from the receiver's power cord and connection cables.
- This problem is especially frequent when using indoor antennas. We recommend using outdoor antennas and 75-ohm coaxial cables.

### A note on standing

For cooling purposes, do not place another AV component directly on top of the receiver. Be sure to leave a space of at least 10 cm.

### For models with side wood boards

If the side wood boards are removed, the top cabinet cannot be reinstalled using the same screws. Consult your store of purchase or a DENON Overseas Service Center.

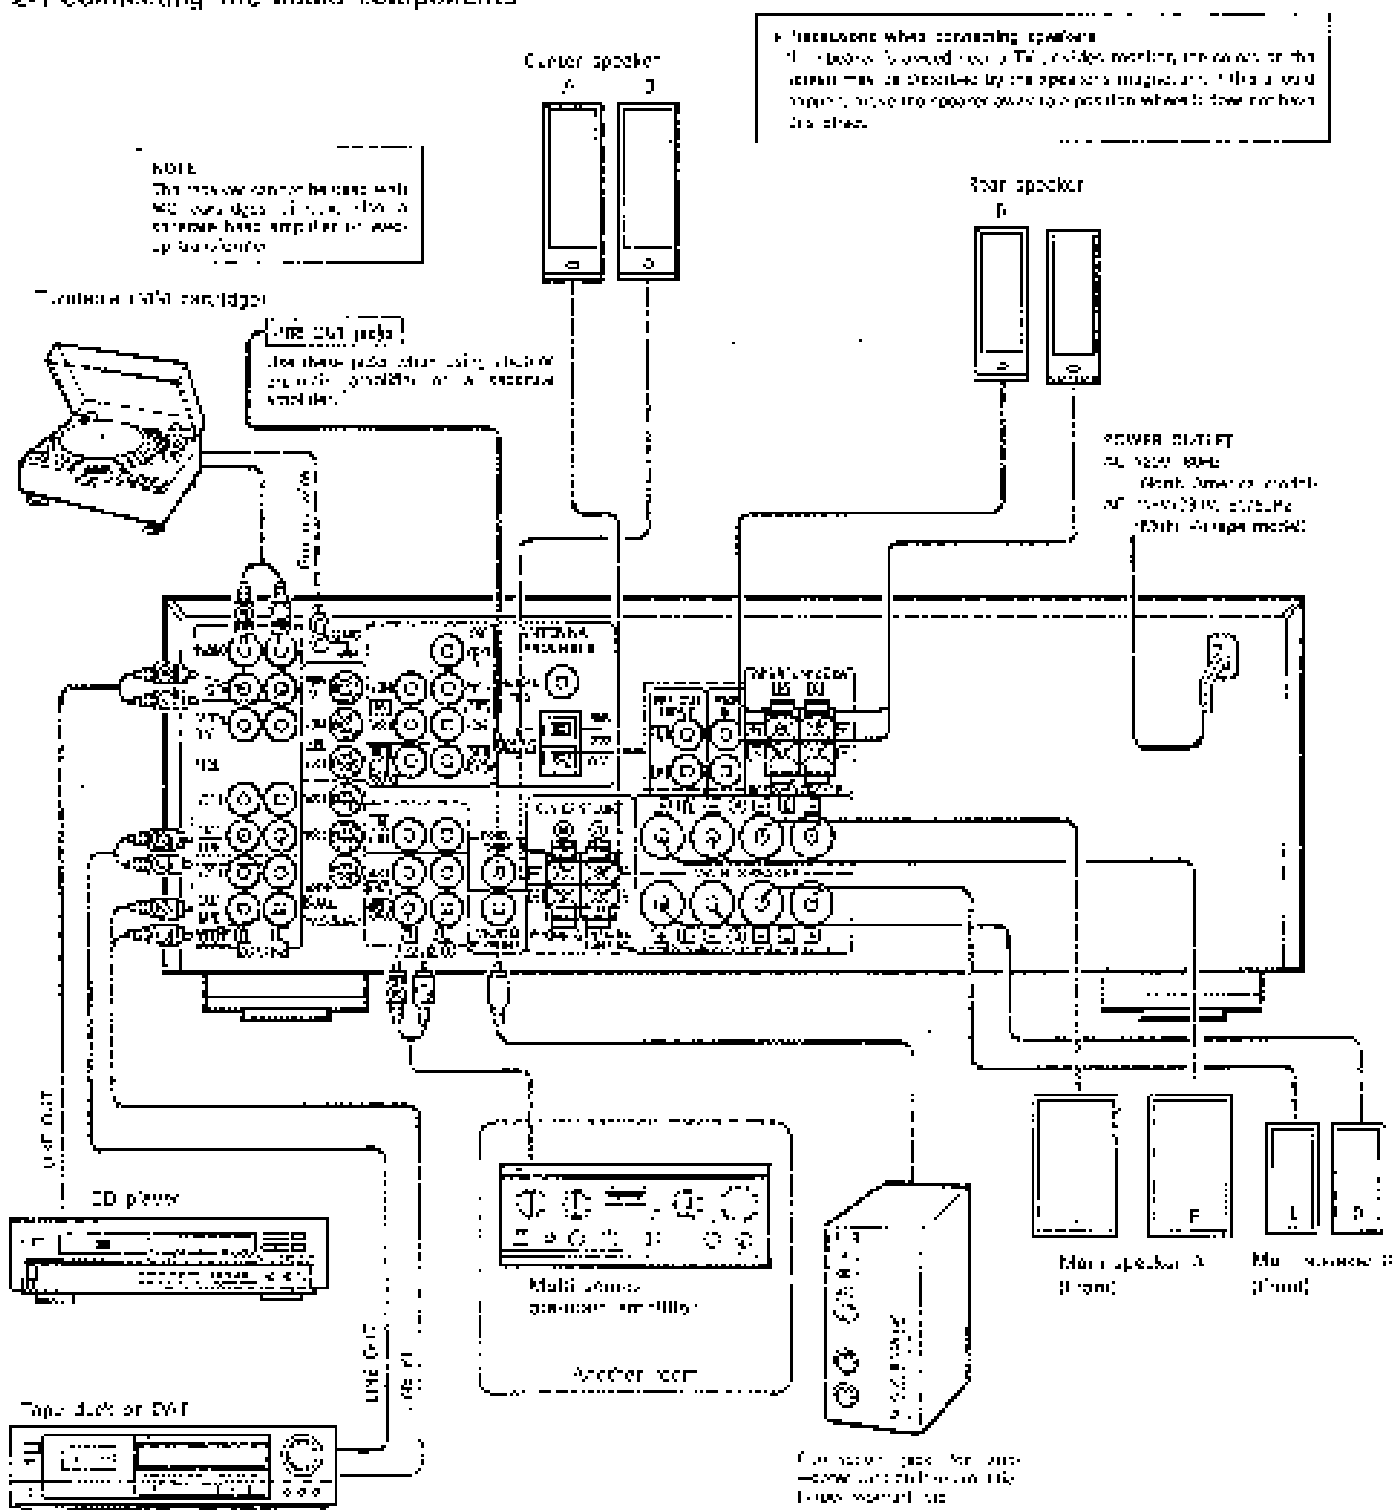

## 2 CONNECTIONS

- Do not plug in the power cord until a connection has been completed.
- Be sure to connect the colored right channels properly (left with left, right with right).
- Insert the plugs securely. Incomplete connections will result in the generation of noise.
- Use the AC OUTLETS for audio equipment only. Do not use them for hair driers, etc.

- Noise: handling plug-in cards together with power wires or placing them near a power transformer will result in the introduction of hum or other noise.
- If there is other noise is produced when the plug-in card is connected, disconnect it.
- Noise or humming may be generated if a connected component is used independently without loading the power of the AYU-2500 or if the happens when on the power of the AYU-2500.

## 2-1 Connecting the audio components

## 2-2 Speaker System Connections

- The receiver can accommodate connections of a total of eight speakers including two sets of front, rear, and center speakers (A and B), one set of rear speakers, and one or two center speakers.
- Connect the speaker terminals with the speakers making sure that the polarities are matched (○ with ○, ⊖ with ⊖). Mismatching of polarities will result in weak stereo sound, unclear orientation of the audio is main center, and the sense of direction of the stereo being impaired.
- When making connections, take care that none of the live - voltage conductors of the speaker cord come in contact with adjacent terminals, with other speaker cord conductors, or with the rear panel.

### Speaker Impedance

- When speaker systems A and B are used separately, speakers with an impedance of from 8 to 16 Ohms can be connected.
- Be careful when using two pairs of main speakers (A, B) at the same time, since use of speakers with an impedance outside the range of 12 to 16 Ohms will lead to damage.
- Speakers with an impedance of 6 to 12 Ohms can be connected for use as center and rear speakers.
- The protection circuit may operate or damage may occur when speakers with an impedance outside of the above range are used.

## 2-3 Connecting the antenna terminals

### ANTENNA INSTALLATION

#### FM ANTENNA

The suggested FM antenna can be used indoors. Outdoor reception for reception from FM stations and DAB using FM signals should not be made at the side of the main shielded enclosure on the wall. Good reception and optimum reception is achieved. A. indoor FM antenna does not continuously and it cannot accept two different antenna wire changes in such case, the indoor FM antenna should only be used temporarily with an outdoor FM antenna has been installed. After connecting the outdoor antenna, transfer of 75 ohm coaxial cable (22cm, 22cm) is strongly recommended.

#### AM ANTENNA

Attach the supplied AM loop antenna to the rear cover using the screw AM antenna.

Connect the leads to the AM ANT and GND terminals. Also use the AM antenna for connecting an outdoor AM antenna (when making) for a connection diagram described the AM loop antenna.

Adjust the loop antenna for obtain optimum reception. When reception is more poor than standard, it is more equate and increased, or turned clockwise and locked the loop to meet an outdoor AM antenna.

#### NOTES

- This receiver has a full auto-tune system. When the power is turned on, the INPUT SELECTOR is changed to FM and the receiver searches the power and tuned FM.

- When using this receiver as a portable receiver, the equipment (TV, VCR, VCD, etc.) which noise may be generated in AM broadcast band, it is also this, keep the receiver for noise level of 0.5 dB (maximum) or less, or connect the AM loop antenna from the intermediate and three (where noise is reduced). If the noise is not required, it is all the power of the receiver and noise when listening to AM broadcast.

### Connection of AM antennas

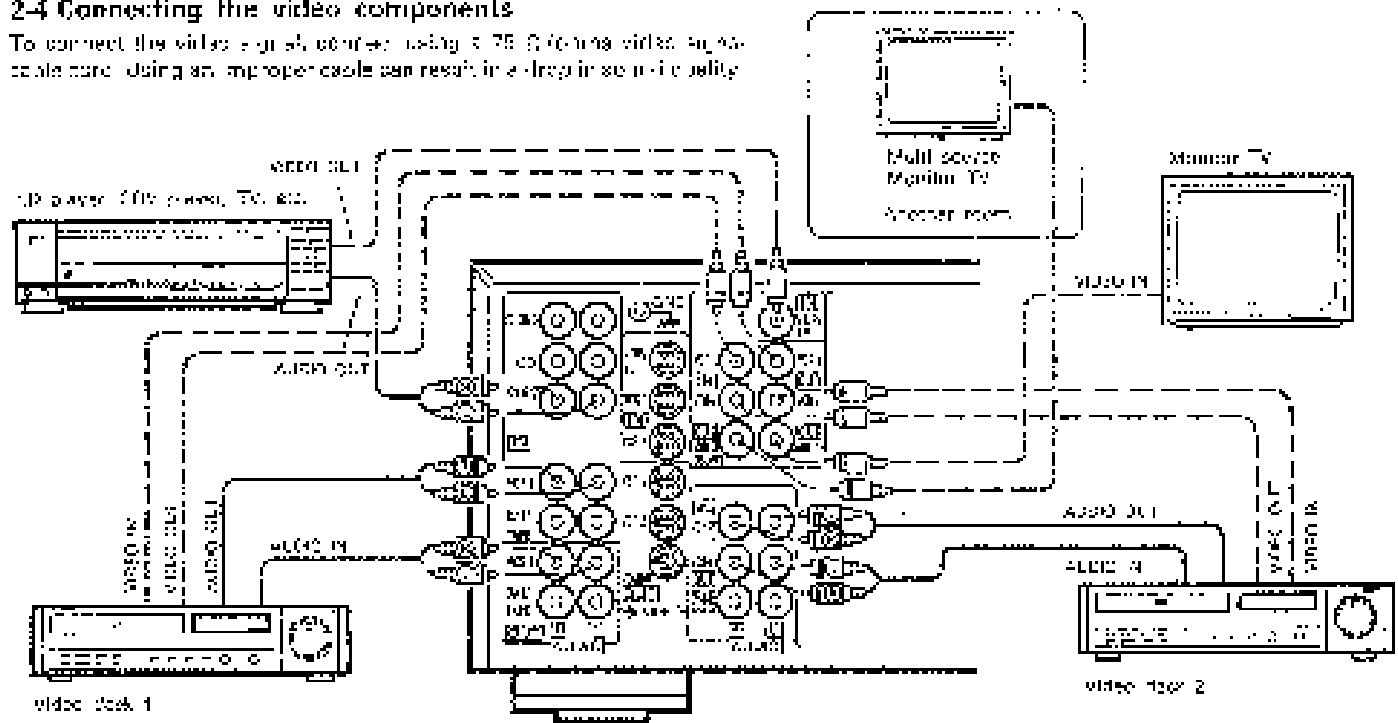

#### How to DAB system install

This receiver is receiver to get the DAB system from the station in Area 20 of the DAB which provides guidelines for proper grounding. In particular, specify that the cable ground shall be connected to the grounding system of the building as close to the point of cable entry as possible.

## 2-4 Connecting the video components

To connect the video signal, connect using a 75  $\Omega$  coaxial video signal cable. Using an improper cable can result in a drop in video quality.

## 2-5 Connecting the S-video terminals

- **A note on the S input jacks**  
The input selectors for the S inputs and all jack inputs work in conjunction with each other.
- **Precaution when using S-jacks**  
This receiver's S-jacks (input and output) and video pin jacks (input and output) have independent circuit structures, so that video signals input from the S-jacks are only output from the S-jack outputs and video signals input from the pin jacks are only output from the pin jack outputs.  
When connecting the receiver with equipment that is equipped with S-jacks, keep the above points in mind and make connections according to the equipment instruction manuals.

## 2-6 Connecting camcorder or game [V-AUX/GAME]

This unit is equipped with VIDEO AUX (AUX) on the front panel to playback of video as input or play of games.

Camcorder or Game

## ■ NORTH AMERICA MODEL ONLY

### ■ AC OUTLETS

#### NOTE:

Only use the AC outlets for audio equipment. Never use them for heaters, TVs or other electrical appliances.

#### Connecting the AC OUTLETS

##### AC OUTLETS

- SWITCHED (load capacity = 120W MAX)

This power line outlet is turned on and off in conjunction with the POWER switch on the AV12000 and when the power is switched between on and standby from the remote control unit. No power is supplied from these outlets when the AV12000 power is at standby. Never connect equipment whose total capacity is above 120W + AC.

## ■ MULTI-VOLTAGE MODEL ONLY

Make the following settings before connecting the components.

### 1. Setting the frequency step

Set the FREQUENCY STEP switch as described below.

- In the U.S.A. and Canada – set the switch to 200 kHz / 10 kHz side. With this setting, the frequency varies in 200 kHz steps in the range of 87.5 to 107.9 MHz (FM) and in 10 kHz steps in 520 to 1740 kHz (AM).
- Elsewhere – set the switch to 50 kHz / 10 kHz side. With this setting, the frequency varies in 50 kHz steps in the range of 87.5 to 107.9 MHz (FM) and in 5 kHz steps in 520 to 1740 kHz (AM).

Only switch the frequency when the power cord is unplugged. Plug in the power cord securely after switching the frequency.

### 2. Setting the line voltage

- The customer can set the VOLTAGE SELECTIONS on the back panel to appropriate AC voltage by using a screwdriver.
- Do not use excessive force in setting the VOLTAGE SELECTION KNOB – you may damage it.
- If the VOLTAGE SELECTION KNOB does not turn smoothly, contact your store of purchase.
- Be sure to set both voltage selector to same position.

### 3. AC OUTLET

#### Connecting the AC OUTLET

##### AC OUTLET

- SWITCHED (load capacity = 120W)

This AC outlet is controlled by the power switch and Remote Control Unit.

Maximum capacity is 120 W.

#### NOTE:

Only use the AC outlet for audio equipment. Never use them for heaters, TVs or other electrical appliances.

### 3 REMOTE CONTROL UNIT

Following the procedure outlined below, insert the batteries below using the remote control unit.

#### ■ Range of operation of the remote control unit

Point the remote control unit at the remote control sensor as shown on the diagram at the left.

#### NOTES:

- The remote control unit can be used from a range of distance of approximately 7 meters (20 feet), but this distance will shorten or elongate will happen if there are obstacles between the remote control unit and the remote control sensor, if the remote control sensor is exposed to (not sunlight or other strong light, or if irradiated from an angle.
- Neon signs or other devices emitting pulsed ultraviolet rays may result in malfunction, so keep this set up far away from such devices as possible.

#### ■ Inserting the batteries

1. Open the battery cover of the remote control unit and remove the battery cover.

2. Insert the two R3P7AA batteries, matching the (+) and (-) marks on the batteries with those in the cover. Close the battery cover until it clicks shut.

#### NOTES:

- Use only AAA, R3P7, LM 3 batteries for replacement.
- Remove the polarized air carbon (discharge) duration inside the battery compartment.
- Remove the battery if the remote control transmitter will not be used for an extended period of time.
- The battery leak, if present, may be noticeable. Avoid touching the leaked material or letting it come in contact with clothing, etc. Clean the battery compartment thoroughly before installing new batteries.
- Have replacement batteries on hand so that the old batteries can be replaced as quickly as possible when the time comes.
- The codes that have been learned may be lost if removal batteries are not replaced within about 3 minutes.

#### 3-1 System code buttons

BEHON remote-control code 3 slide components can be controlled using this unit's remote control unit. Note that same components, however, cannot be operated with this remote control unit.

1. Set the slide switch to "AUDIO" ("AVC" or "AVC").

2. Set the slide switch to the position for the component to be operated (CD, BECK or DAI).

3. Use the buttons shown below to operate the components. For details, refer to the respective component's manual.

4. For CD players and DAI:

5. For tape decks:

## 3-2 Preset memory

This remote control unit can be used to operate components of other manufacturers without using the learning function by registering the manufacturer of the component as shown on the diagrams below.

1. Set the slide switch to "VIDEO".

2. Set the slide switch to the component to be registered (VDP, VCR or TV).

Ex: To preset a VDP in the personal memory.

3. Holding in the POWER button, press the button for the corresponding manufacturer in block A. (Refer to Table 1.)

The LEARNED TX LED flashes.

4. Next, while holding in the POWER button, press the button for the code in block B. (Refer to Table 1.) The operation is complete when the LEARNED TX LED lights.

5. To continue registering other components, repeat steps 2 to 4.

### • Operation after components are registered

After components are registered, they can be operated using the buttons in block C shown below. For details, refer to the description of the component's manual. Before operating the component, set slide switch ② to the position for that component.

#### 1. VDP

#### 2. VCR

#### 3. TV

Table 1: Combinations of Personal System Codes for Different Manufacturers

## NOTE

Preset memory function will not work for some models or some codes.

In such case, please use the learning function. (Page 12)

### • Clearing the Preset Memory

1. Press the **USE/LEARN** (learn) button with the tip of a pen, etc. to set the learn mode.

2. Set the slide switch to "VIDEO".

3. Set the program switch to the slide to be cleared.

Ex. To clear the VIDEO preset memory

4. Press the **SYSTEM CA** (SET) button, and hold it in for at least four seconds.

5. When both the **START** and **LEARNING** LEDs light simultaneously, all the stored codes are cleared.

### 3-3 Remote Control Unit Learning Function

Use the learning function to operate our equipment manufactured by companies other than Denon and when your VCR or TV does not operate with the preset memory function.

1. Press the **USE/LEARN** selector button with the tip of a pen, etc. In this case, learn mode with the **START** and **LEARNED/TX** indicators flash.

The indicator lamps start to flash.

2. Set the program switch in the VCR to be "learned".

Set to the **ADD Q** side for the CD, tape deck or **QAT** position, to the **VCR** side for the **LD**, **VCR** or **TV** position.

3. Set the program switch on the amplifier to be "learned".

4. Set the remote control units as they are facing each other, then press the button to be "learned" on this unit's remote control unit.

The indicator stops flashing and the **START** LED lights.

The learnable buttons are the buttons which can be operated with the DENON system codes for the CD player, DAF and tape deck, the buttons which can be operated with the preset memory for the VCR, VDP and TV. For the TV only, however, the buttons in the section indicated "A" on the diagram above can also be "learned". Use these to "learn" TV channels.

5. Check that the **START** LED is lit, then press the button to be "learned" on the other remote control unit.

6. Once the **START** LED turns off and the **LEARNED/TX** LED lights, release the button on the other remote control unit.

The two LEDs start flashing again.

7. To "learn" other buttons, repeat steps 4 and 5.

8. Once the learning operation is completed, press the **USE/LEARN** selector button again. The two LEDs stop flashing and the learning mode is canceled.

Check that the stored codes work properly.

9. For instructions on resetting the "learned" codes, refer to "clearing the Preset Memory" on page 11.

#### NOTES:

- Up to 29 codes can be "learned", but this number may be lower if the codes are long.
  - If a non-learnable button is pressed or two or more buttons are pressed at once, the two LEDs will once again light when the **START** LED is released.
  - If the codes cannot be stored, the **LEARNED/TX** LED does not light after the **START** LED is released. (This may happen for a limited number of models.)
  - When the LEDs start flashing again after the **START** LED is lit, this means that the memory is "ready to go" and the codes you have just attempted to store have not stored.
- To "learn" other codes, first perform the resetting operation.

## 4 OPERATIONS

### 4-1 Preparations for Play Back

1. Check that all connections are proper.
2. Set to the minimum position.

3. Set to the center position.

4. Set to the center position.

5. Set the remote source unit's side switch to the AUDIO position.

6. Press the power button to turn the power on.

### 4-2 Playing the program source (Stereo play back)

7. Select the front speakers.

Press the speaker & on button to turn the speaker on.

1. Select the source to be played.

2. Select the STEREO mode.

3. Adjust the MASTER VOLUME control.

### 4-3 Adjusting the BALANCE control and TONE control

#### 1. Adjust the front left/right BALANCE.

Turn the control clockwise to increase the volume of the right channel, clockwise to reduce the volume of the left channel.

#### 2. Adjust the BASS and TREBLE

Turn the control clockwise to increase the bass, counter-clockwise to decrease it.

Turn the control clockwise to increase the treble, counter-clockwise to decrease it.

#### 3. AVX/ST switch

Turn this switch on to create a powerful sound with even stronger low tones.

#### 4. CINEMA HD switch

This switch is used when playing back movie video software and the screen portion is felt to be noisy when the ears. The output frequency response of the center and front speakers becomes closer to that of a theater, and the sound becomes more pleasant to the ears.

#### 5. TONE DEFLECT switch

Use this when you do not want to adjust the sound. This can be used in the stereo mode.

### 4-4 Simulcast playback

Use this switch to monitor a video source other than the input source.

- Press the VIDEO SELECT button repeatedly until the desired source appears on the display.

#### 3. Cancelling simulcast playback

- Press the VIDEO SELECT button once again.
- Select the VIDEO function.

### 4-5 Using the muting function

Use this to turn off the audio output temporarily.

- Press the MUTE button.

#### 2. Cancelling MUTE mode.

- Press the MUTE button again.

### 4-6 Listen with headphones

Connect the headphones to the PHONES jack.

When listening with headphones privately, set the SPEAKER switch to the OFF position.

#### 4-7 Multi-Source recording/playback

The Multi-Source function allows you to record a source other than the source currently playing or to output its signal to the MULTI SOURCE output terminal.

DISPLAY

1. Select the source to be output to the recording or MULTI SOURCE output terminal.

2. Turn on the MULTI Source indicator.

3. The selected source is indicated.

※ To cancel the multi-source mode and recording source selection

Press the MULTI SOURCE button repeatedly until "Source" appears on the display.

※ The VIDEO MONITOR output is automatically switched to AUX/DAVE when the input source is AUDIO and AUX/DAVE is selected by Multi-Source.

#### Multi-source and multi-zone playback

By connecting another pre-main amplifier, etc. to the MULTI SOURCE jack, you can listen to a source other than the one in the main room in other room. To connect the video signal, use a 75 Ω 20 pins cable designed specifically for video signals. Using an improper cable can result in a drop in sound quality.

#### 4-8 Using the surround function

This unit is equipped with a high precision D S P (Digital Signal Processor) for processing signals digitally to simulate sound fields. Select the surround mode according to the playback source and adjust the parameters according to the conditions in the listening space to achieve a rich and powerful sound.

Types of surround modes and their characteristics

1	Dolby Pro Logic	Use this when playing program sources recorded in Dolby Surround.
2	Wide Stereo	Use this to enjoy program sources, recorded in Dolby Surround with the atmosphere of a movie theater.
3	Live Surround	Use this to enjoy program sources, recorded in Dolby Surround with the atmosphere of a live performance.
4	Super Stadium	Use this to enjoy program sources such as football or baseball games with the atmosphere of a stadium.
5	Mono Movie	In this mode, a sense of expansion is added to monaural audio sources. This mode is best suited for playing old movies or movie tapes recorded in monaural.
6	Rock Arena	The powerful reverberations of this mode produce a sound field which recreates the excitement of live concerts. This mode is effective for rock, pop, etc. music.
7	Jazz Club	This mode creates the sound field of a live house with a low setting and hard reverberations. The result is that the artist seems to be performing right before your eyes.
8	Classic Concert	This mode creates a sound field simulating a large concert hall, rich in reverberation. This mode is also characterized by compressed acoustics, and is effective for playing classical music, etc.
9	Matrix	Use this to enjoy stereo music sources with rich reverberations.

## ► Before using the surround function

Make the following adjustments before using the surround function.

1. Set the Delay Time Logic mode.

DELAY  
FUNCTION

VOCE

2. Select the center mode.

Select the center mode according to the speaker.

3. Enter the test tone.

4. Select the auto sequence mode.

5. Adjust the center channel (woofer) position and volume of the speakers to the same level.

6. Turn the test tone off.

7. Adjust the delay time and seating position as 100%~90%.

2

## Center Mode

Set the center mode as described below, according to the type of center speaker being used.

**Normal mode:** This mode is suited for an arrangement in which the center channel speaker is smaller than the left and right speakers. Signals below 100 Hz which have almost no effect on directional orientation are distributed to the left and right channels, whereas the center channel output signals greater than 100 Hz. As a result, the bass of the left and right channels increases the apparent width of the sound.

**Wide mode:** This mode is suited for an arrangement in which the center channel speaker is of the same size as the left and right speakers. The entire sound field from low region to high is output in the center channel to provide an exciting sound field for your enjoyment.

**Phantom mode:** Use this mode when center channel speaker is not used. In this mode, signals are distributed to the left and right channels which is significantly oriented to the center and this provides an exciting sound field for your enjoyment.

## Delay Time

The optimum delay time will differ depending on the listening position. Referring to the chart at right, set the optimum delay time for your room's space and seating position. For example, when the distance from the front speakers to the listening position is 20 feet, and that from the rear speakers to the listening position is 15 feet, the optimum delay time will be 20 ms. The variable range of the delay time differs depending on the mode.

- ☒ PREFERRED
- ☒ ADD TABLE
- ☐ NOT A COMBINATION

## ■ Using the surround function

1. Select the surround mode according to the input source.

2. If necessary, adjust the levels.

3. Adjust the parameters to the desired settings.

4. To check the DSP effect, press the EFFECT button to turn the effect on and off.

5. To set the parameters back to the standard settings, press the EFFECT button.

## ■ Surround modes and parameters

DELAY TIME	.....	This can be set to between 15 and 33 msec for the DOLBY PRO LOGIC mode, between 0 and 360 msec for the MATRIX mode. It is controlled directly with the DSP EFFECT "+" and "-" buttons.
ROOM SIZE	.....	These parameters can be used in modes other than the DOLBY PRO LOGIC and MATRIX modes.
EFFECT LEVEL	.....	"Room size" refers to the size of the sound field.
EFFECT	.....	"Effect level" refers to the strength of the effect. When the effect is detected or seems strange, lower the level.
CENTER LEVEL	.....	This can be used in surround modes other than DOLBY PRO LOGIC, WIDE SCREEN, LIVE SURROUND and MATRIX MODE.
CENTER MODE	.....	This can be used in the DOLBY PRO LOGIC, WIDE SCREEN, and LIVE SURROUND modes when the center mode is set to the normal or wide mode. In other cases, the center output is automatically turned off.
		When this is selected in the DOLBY PRO LOGIC mode, the wide screen and live mode center modes are automatically set.

## ■ Using the Personal Memory function

The personal memory function allows you to store the current input position and surround mode in memory. Built settings can then be recalled instantly by pressing a single button.

### Presetting

1. Set the desired input position and surround mode using the procedures described in sections 4.2 and 4.3.

2. Press the Personal Memory "MEMORY" button. The standby mode is set.

3. Press the button (1) or (2) at which you want to store the setting.

The setting is now stored.

### Recalling

4. Press the button (1), (2) or (3) at which the desired setting has been stored.  
The unit's automatically switches to the setting.

— PERSONAL MEMORY —

× The DATA/TAPE MONITOR position cannot be stored in the memory.

## 5 LISTENING TO THE RADIO

### 5-1 Auto preset memory

This unit is equipped with a function that automatically searching for FM broadcast stations and storing them in the preset memory.

1. Press the **POWER** button while holding in the **MEMORY** button. The auto preset memory begins searching for FM broadcast stations.

2. When the first FM broadcast station is found, that station is stored in the preset memory at channel A1. Subsequent stations are automatically stored in order of preset channels A2 to A9, B1 to B9, C1 to C9 and D1 to D9 for a maximum of 32 stations.

3. Channel A1 is tuned in after the auto preset memory operation is completed.

#### NOTES:

- If an FM station cannot be preset automatically due to weak reception, use the "Manual tuning" operation to tune in the station, then preset it using the manual "Preset memory" operation.
- AOS station is not stored in the memory with priority.

### 5-2 Auto tuning

1. Set the Input function to "TUNER".

2. Watching the display, press the **BAND** button to select the desired band (AM or FM).

3. Press the **MODE** button to enter the auto tuning mode.
4. Press the **TUNING UP** or **DOWN** button.

"AUTO" appears on the display.

Automatic searching begins, then stops when a station is found in.

If tuning does not stop at the desired station, use the "Manual tuning" operation.

### 5-3 Manual tuning

1. Set the Input function to "TUNER".
2. Watching the display, press the **BAND** button to select the desired band (AM or FM).
3. Press the **MODE** button to enter the manual tuning mode. Check that the display's "AUTO" indicator turns.

4. Press the **TUNING UP** or **DOWN** button to tune in the desired station. The frequency of signal continuously when the button is held in.

### 5-4 Preset memory

1. Use the "Auto tuning" or "Manual tuning" operation to tune in the station to be preset in the memory.
2. Press the **MEMORY** button.

- Press the **SHIFT** button and select the desired memory block (A to D).
- Press the **PRESET UP** or **DOWN** button to select the desired preset channel (1 to 8).

- Press the **MEMORY** button again to store the station in the preset memory.

To preset other channels, repeat steps 2 to 5. A total of 32 broadcast stations can be preset — 8 stations (channels 1 to 8) in each of boxes A to D.

## 5-5 Recalling preset stations

- Watching the display, press the **Shift** button to select the preset memory block.

- Watching the display, press the **PRESET UP** or **DOWN** button to select the desired preset channel.

## 5-6 RDS (Radio Data System)

RDS works only on the FM band. It is a broadcasting service which allows station to send additional information along with the regular radio program signal.

The following three types of RDS information can be received on this unit:

### • Program Type (PTY)

PTY identifies the type of RDS program.

The program types and their displays are as follows:

NEWS	News	SPORTS	Sports
INFO	Information	COUNTRY	Country
SPORTS	Sports	CLASSIC	Classic
POP	Pop	SOFT	Soft
ROCK	Rock	MODERN	Modern
DISCO	Disco	JAZZ	Jazz
ADULT POP	Adult Pop	CLASSIC	Classic
SOFT ROCK	Soft Rock	POP	Pop

### • Traffic Program (TP)

TP identifies programs that carry traffic announcements.

This allows you to easily find out the latest traffic conditions in your area before you leaving home.

### • Radio Text (RT)

RT allows the RDS station to send text messages that appear on the display.

## 5-7 RDS search

Use this function to automatically tune to FM stations that provide RDS service.

1. Set the input function to "TUNER".

2. Press the RDS button until "RDS SEARCH" appears on the display.

When a broadcast station is found, that station's name appears on the display.

3. Press the PRESET UP or DOWN button to automatically begin the RDS search operation.

5. To continue searching, repeat step 3. If no other RDS station is found when all the frequencies are searched, "NO RDS" is displayed.

The RDS station is found with above operation, all the reception band are searched.

## 5-8 PTY search

Use this function to find RDS station broadcasting a designated program type (PTY).

For a description of each program type, refer to "Program Type (PTY)".

1. Set the input function to "TUNER".

2. Press the RDS button until "PTY SEARCH" appears on the display.

3. Watching the display, press the PTY button to select the desired program type.

4. Press the PRESET UP or DOWN button to automatically begin the PTY search operation.

If there is no station broadcasting the designated program type with above operation, all the reception bands are searched.

5. The station name is displayed on the display after searching is over.

6. To continue searching, repeat step 4.

If no other station broadcasting the designated program type is found when all the frequencies are searched, "NO PROGRAM" is displayed on the display.

## 5-9 TP search

Use this function to find RDS stations broadcasting the RDS program (TP) stations.

1. Set the input function to "TUNER".

2. Press the RDS button and "TP SEARCH" appears on the display.

3. Press the PRESET UP or DOWN button TP search begins.

If no TP station is found with above operation, all the available bands are searched.

4. The station name is displayed after searching stops.

5. To continue searching, repeat step 3.

If no other TP station is found what is left the frequencies are scanned and "NO PROGRAM" is displayed.

## 5-10 RT (Radio Text)

"RT" appears on the display when radio text data is received.

When the RT button is pressed while receiving an RDS broadcast station the text data broadcast from the station is displayed. To turn the display off, press the RT button again. If no text data is being broadcast, "NO TEXT DATA" is displayed.

## • RDS Emergency Alert

"ALERT" will flash on the MFD when the unit receives the Emergency Program Type Code (EPTC) from an RDS station. This feature may not operate properly if the signal from the RDS station is too weak or is subject to interference. It is not possible to select the "ALERT" display from the TP search mode.

### RDS Emergency Alert Feature

The RDS Emergency Alert Feature is selected by a signal sent at the discretion of the RDS Broadcast Station. The RDS Emergency Alert Feature is included in this product for the convenience of the consumer, and is not intended to augment or replace a local Emergency Broadcast System as administered by the Federal Communications Commission. For this reason, Nippon Columbia Co. and its Subsidiaries, including but not limited to DENON America, Inc. and DENON Canada, Inc., refuse all Warranties, claims of merchantability or fitness for sale, if any, whether incidents consequent to or otherwise, related to, either directly or indirectly, the operation or lack of operation of this feature. This exclusion applies to any and/or all Nippon Columbia Co. Products, whether present or future, that implement, in any form or variation, the RDS Emergency Alert Feature.

## 6 EASY OPERATION FUNCTIONS

This unit is equipped with the functions described below to make operation simpler.

### 6-1 On-screen display

Each time an operation is performed, a description of that operation appears on the display connected to the unit's VIDEO MONITOR OUT terminal. A unit's own operating status can be checked during playback by pressing the remote control unit's ON SCREEN button.

Such information as the position of the input selector and the surround parameter setting is output in sequence.

The output from the S MONITOR OUT terminal has priority for the on-screen display. If you want to always output the on-screen display signal to the video output, do not connect a cable to the S MONITOR OUT terminal.

The on-screen display is not displayed for the MULTI SOURCE MONITOR OUT terminal.

This image's on-screen function is designed for high resolution monitors. Displays with small characters may be difficult to read on some types of low resolution TVs.

### 6-2 Front panel display

Descriptions of the unit's operations are also displayed on the front panel display. In addition, this display can be switched to check the Unit's operating status while playing a source by pressing the remote control Unit's PANEL button.

### 6-3 Personal memory

This is a function allowing you to save recent the input position and surround mode with a single button. Once the input selector and surround mode have been preset.

For details, refer to Page 47.

### 6-4 System call (Remote control unit)

This function allows you to preset frequently used operation patterns in the remote control unit that automatically sends a series of up to ten remote control codes with a single button.

#### Presetting

1. Press the SET button.

2. Press the buttons for the codes to be sent, changing the position of the slide switch as necessary. Up to ten buttons can be set. Buttons which have been selected and buttons which have been preset can also be selected.

3. Press the SYSTEM CALL button (M1 or M2) at which you want to store the codes. The setting is now stored.

#### Recalling

4. Press the SYSTEM CALL button (M1 or M2) at which the desired codes have been stored. The series of codes is now sent.

## 7 INITIALIZATION OF THE MICROPROCESSOR

When the indicator of the MHL display is not normal or when the operation of the unit does not show the regular value result, the initialization of the microprocessor is required by the following procedure.

1. Switch off the unit and remove the AC power cord from the wall outlet.
2. Hold the following AUDIO FUNCTION button and VIDEO FUNCTION button, and plug the power cord into the outlet.
3. Check that the entire display is flashing with the removal of about 3 seconds, and release your fingers from the 2 buttons.
4. Switch on the unit and the microprocessor will be initialized.

## 8 LAST FUNCTION MEMORY

- This receiver is equipped with a last function memory which stores the input and output settings / conditions as they were immediately before the power is switched off.
- This function enables the user to perform complicated settings when the power is restored or
- This receiver is also equipped with a backup memory. This function provides approximately one week of memory storage with the power cord disconnected.

## 9 TROUBLESHOOTING

If a problem should arise, first check the following:

- Are the connections correct?
- Have you operated the amplifier according to the Operating Instructions?
- Are the speakers, turntable, and other components operating properly?

If the receiver is not operating properly, check the items listed in the table below. If the problem persists, there may be a malfunction. Disconnect the power immediately and contact your store of purchase.

Symptom	Cause	Remedy	Page
DISPLAY not lit or sound not produced when power switch set to on	<ul style="list-style-type: none"> <li>Power cord not plugged in securely.</li> </ul>	<ul style="list-style-type: none"> <li>Check the insertion of the power cord plug.</li> </ul>	3

## 10 SPECIFICATIONS

	for North America model	for multi-voltage model
<b>• Audio Section</b> <b>(Power amplifier)</b> Rated outputs: (All properties shown are only for the power amplifier stage.)	for North America model MAX. output (2 channels) 85 W + 85 W (8 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD) 10 W + 10 W (16 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD) CENTER (center for 2 channel) 85 W (8 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD) 10 W (16 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD) RF5B (5ch 2ch driven) 25 W + 25 W (8 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD)	for multi-voltage model 15 W + 15 W (8 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD) 10 W + 10 W (16 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD) 15 W + 15 W (8 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD) 10 W + 10 W (16 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD) 15 W + 15 W (8 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD) 10 W + 10 W (16 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD) 15 W + 15 W (8 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD) 10 W + 10 W (16 $\Omega$ ohms, 20 Hz - 20 kHz with 0.05% THD)
Output terminals:	Main: A or B 8 $\Omega$ 16 $\Omega$ ohms A: 16 $\Omega$ 16 $\Omega$ ohms Comm: 8 $\Omega$ 16 $\Omega$ ohms Rem: 8 $\Omega$ 16 $\Omega$ ohms	8 $\Omega$ 16 $\Omega$ ohms 8 $\Omega$ 16 $\Omega$ ohms 8 $\Omega$ 16 $\Omega$ ohms 8 $\Omega$ 16 $\Omega$ ohms
<b>(Pre-amplifier)</b> Line input (Each line input - FRONT PRE OUT) Input sensitivity/Impedance: Frequency response: Tone control range: Signal-to-noise ratio (FRONT PRE OUT) Distortion factor: Maximum headphone output: Phono equalizer (PHONO input - REC OUT) RIAA deviation: Signal-to-noise ratio: Rated output / Maximum output: Distortion factor:	180 mV/47 k $\Omega$ ohms (1-2ND (MON) 2.5 mV/47 k $\Omega$ ohms) 10 Hz to 50 kHz $\pm$ 1.2 dB BASS: -10 dB to +10 dB TREBLE: -10 dB to +10 dB 32 dB 0.3% (1 kHz, 1 W) (STEREO model) 234 mW (8 $\Omega$ ohms) 1.0 $\pm$ 0.20 Hz to 20 kHz 74 dB (A weighting, with 5 mV input) 150 mW/8 W 0.03% (1 kHz, 8 V)	180 mV/47 k $\Omega$ ohms (1-2ND (MON) 2.5 mV/47 k $\Omega$ ohms) 10 Hz to 50 kHz $\pm$ 1.2 dB BASS: -10 dB to +10 dB TREBLE: -10 dB to +10 dB 32 dB 0.3% (1 kHz, 1 W) (STEREO model) 234 mW (8 $\Omega$ ohms) 1.0 $\pm$ 0.20 Hz to 20 kHz 74 dB (A weighting, with 5 mV input) 150 mW/8 W 0.03% (1 kHz, 8 V)
<b>• Tuner Section</b> Receiving Range: Usable Sensitivity: 50 dB Selecting Sensitivity: Signal to Noise Ratio (HF-A) Total Harmonic Distortion (at 1 kHz)	[FM] (center 1 V/47 k $\Omega$ ohms, 0.5% $\pm$ 1 $\times$ 10 <sup>-3</sup> W) 87.5 MHz - 107.5 MHz (for North America model) 87.5 MHz - 107.5 MHz (for multi-voltage model) 1.0 $\mu$ V (1% ISE) MONO: 1.8 $\mu$ V (1% ISE) STEREO: 2.0 $\mu$ V (3% ISE) MONO: 80 dB STEREO: 75 dB MONO: 0.15% STEREO: 0.3%	[AM] 540 kHz - 1710 kHz (for North America model) 540 kHz - 1710 kHz (for multi-voltage model) 2 $\mu$ V MONO: 1.8 $\mu$ V (1% ISE) STEREO: 2.0 $\mu$ V (3% ISE) MONO: 80 dB STEREO: 75 dB MONO: 0.15% STEREO: 0.3%
<b>• Video Section</b> Standard video jacks: Input and output level/Impedance: Frequency response: S-video output jacks: Input and output level/Impedance: Frequency response:	1 V/47 k $\Omega$ ohms 5 Hz to 8 MHz $\pm$ 0.5 dB 1 V/47 k $\Omega$ ohms 0.285 V/47 k $\Omega$ ohms 5 Hz to 10 MHz $\pm$ 0.5 dB	1 V/47 k $\Omega$ ohms 5 Hz to 8 MHz $\pm$ 0.5 dB 1 V/47 k $\Omega$ ohms 0.285 V/47 k $\Omega$ ohms 5 Hz to 10 MHz $\pm$ 0.5 dB
<b>• General</b> Power supply: Power consumption: Maximum external dimensions: Weight:	AC 120 V, 60 Hz (for North America model) AC 110-230 V, 50/60 Hz (for multi-voltage model) 0.3 A (for North America model) 770 W (for multi-voltage model) 425 (W) $\times$ 116 (H) $\times$ 433 (D) mm (16 3/4" $\times$ 4 1/2" $\times$ 17 3/4") (without side-woofer boards model) 470 (W) $\times$ 142 (H) $\times$ 432 (D) mm (18 1/2" $\times$ 5 3/8" $\times$ 17 3/8") (with side-woofer boards model) 11.7 kg (25 lbs 11 oz) (without side-woofer boards model) 13.0 kg (28 lbs 11 oz) (with side-woofer boards model)	AC 120 V, 60 Hz (for North America model) AC 110-230 V, 50/60 Hz (for multi-voltage model) 0.3 A (for North America model) 770 W (for multi-voltage model) 425 (W) $\times$ 116 (H) $\times$ 433 (D) mm (16 3/4" $\times$ 4 1/2" $\times$ 17 3/4") (without side-woofer boards model) 470 (W) $\times$ 142 (H) $\times$ 432 (D) mm (18 1/2" $\times$ 5 3/8" $\times$ 17 3/8") (with side-woofer boards model) 11.7 kg (25 lbs 11 oz) (without side-woofer boards model) 13.0 kg (28 lbs 11 oz) (with side-woofer boards model)
<b>• Remote control unit (RC-180)</b> Batteries: External dimensions: Weight:	R6P1AA Type I two batteries 70 (W) $\times$ 215 (H) $\times$ 19 (D) mm (2 3/4" $\times$ 8 1/2" $\times$ 3/4") 100 g (App. os. 3.5 oz) (including batteries)	R6P1AA Type I two batteries 70 (W) $\times$ 215 (H) $\times$ 19 (D) mm (2 3/4" $\times$ 8 1/2" $\times$ 3/4") 100 g (App. os. 3.5 oz) (including batteries)

## NIPPON COLUMBIA CO., LTD.
