Tera

Model: D6100

2D Area-imaging Barcode Scanner
with Indicator and Physical Switch

User Manual

Ver.01.1.01

About This Manual

An asterisk (*) next to an option indicates the default setting.

Scanners are factory programmed for the most common terminal and communications settings. If you need to change these settings, you can program them by scanning the barcodes in this manual.

For correct and effective use of the product, please read this manual carefully and do not scan configuration barcodes at random. Some settings would otherwise be temporarily unavailable.

Getting Started:

Follow these steps to ensure your scanner is working properly:

1. Connect the cable to the device first, then to a USB port on the computer.
2. Open Notepad on your PC.
3. Click on the Notepad window to ensure that it is the active application.
4. Scan a test barcode.
5. Check the Notepad window to see if the correct barcode information appears.
6. If the barcode information in Notepad matches test barcode, congratulations! Your scanner is working properly.

Please do not hesitate to contact us if you have any questions.

Vibration

The scanner vibrates once when a barcode is successfully read. If you don't want the scanner to vibrate, scan " Vibration Off" barcode.

Vibration On

Vibration Off

Power Timeout Timer (Sleep Timer)

When there is no activity within a specified time period, the scanner turns off. Scan the appropriate scanner power time-out barcode to change the timeout duration (in seconds).
Note: If there are no trigger pulls during the timer interval, the scanner turns off. Whenever the trigger is pressed, the timer is reset.

Italy

United Kingdom

Operation Modes

Real Time Mode

By default, the barcode scanner is in real time mode and it transmits scanned data into the host device immediately.

Real Time Mode*

Storage Mode

Storage mode is used to store barcode data when a scanner is out of range of its receiver or when performing inventory. The data is stored in the memory so it won't get lost when the barcode scanner is turned off. When the scanner's buffer space is full, any barcodes scanned generate an error tone. In order to clear the scanner's buffer, you must scan Clear All Stored Codes.

Storage Mode

Upload All Stored Codes

In storage mode, the scanner won't transmit the data to the host device even when it's back in range. Users need to scan the following code to instruct the scanner to transmit the stored data.

Upload All Stored Codes

Total Records

If you wish to output the total number of barcodes scanned when in storage mode, scan Total Records.

Clear All Stored Codes

If you want to clear the scanner's buffer of all data accumulated in storage mode, scan Clear All Stored Codes.

Pairing the Scanner with its Receiver

If the scanner doesn't connect to the USB dongle automatically, please follow these steps to re-establish the connection between the scanner and its receiver.

Step 1: Unplug the receiver (If the receiver is not plugged in, please disregard this step)

Step 2: Scan the "2.4GHz Mode" barcode

Step 3: Scan the "Pairing" barcode

Step 4: Plug the receiver in to a working USB port on your computer

Pairing the Scanner with Bluetooth Devices

The scanner can be paired with Bluetooth devices such as personal computers, laptops, and tablets.

Step 1: Scan the Bluetooth HID barcode and the Pairing barcode below to establish one-way communication with the scanner.

Step 2: Set your personal computer, laptop, or tablet so it searches for other Bluetooth devices.

Step 3: Once your personal computer, laptop, or tablet has located the scanner, select the scanner name. They will automatically pair with the scanner.

USB-COM/Virtual Serial Port

Scan the following code to program the scanner to emulate a regular RS232-based COM Port. No extra configuration is necessary. To exit USB-COM mode, please scan the 2.4GHz Mode barcode.

USB-COM Mode

Case Conversion

Alphabetic keyboard characters can be forced to be all upper case or all lowercase. So if you have the following barcode: "AZErty", you can make the output "AZERTY" by scanning Convert All Characters to Upper Case, or to "azerty" by Convert All Characters to Lower Case.

Conversion Off*

Convert All Characters
to Upper Case

Convert All Characters to Lower Case

Terminators (Termination Suffixes) - Enter, Tab

By default, the scanner adds a carriage return suffix to all symbologies. If you don't want the scanner to "press" the Enter key after every scan, please scan the None barcode to remove the default termination suffix. If you need the scanner to "press" the Tab key after every scan, please scan the Horizontal Tab barcode below.

Carriage Return*

Horizontal Tab

None (Clear Termination Suffixes)

Timestamp

If you want to record the time and date for every scan, scan either Time & Date Prefix or Time & Date Suffix. If the time and date stamp doesn't match your computer's, contact Tera customer service for Time Sync Tool.

Show Current Time & Date

Time & Date Prefix

Time & Date Suffix

Clear Timestamp

Prefix and Suffix Overview

When a barcode is scanned, additional information is sent to the host computer along with the barcode data. This group of barcode data and additional, user-defined data is called a "message string". The selections in this section are used to build the user-defined data into the message string. Prefix and Suffix characters are data characters that can be sent before and after scanned data. By default, they are sent with all symbologies. Below is draw of the breakdown of a message string.

<Prefix><Barcode Data><Suffix><Termination Suffix>

Points to keep in mind.

1. It is not necessary to build a message string. The selections in this section are only used if you wish to alter the default settings.
2. You can add any prefix or suffix from the Appendix ASCII Character Chart.
3. Enter prefixes and suffixes in the order in which you want them to appear on the output.
4. The maximum size of a prefix or suffix configuration is 16 characters.

Add a Prefix or Suffix

Step 1: Scan the Add Prefix or Add Suffix barcode

Add Prefix

Add Suffix

Step 2: Scan the barcode in the rightmost column which represents the character you need.

For example, add an @ as a prefix, you should scan the “Add Prefix” barcode, then the 64th barcode from the Appendix ASCII Character Chart.

Removal of Characters

If you need to remove leading and/or trailing characters from scanned bar codes, please follow these steps:

1. Scan the “Remove characters from the start” barcode or the “Remove characters from the end” barcode

Remove characters from the start

Remove characters from the end

2. Scan the appropriate code among the following digit codes:

1 digit

16 digits

Scan Modes

Manual Trigger Mode

A scan mode for reading barcodes by pulling the trigger.

Manual Trigger Mode*

Continuous Scan Mode

A scan mode that continuously keeps scanning barcodes.

Continuous Scan Mode

Sensor-activated Mode

For sensor-activated mode, when the scanner is idle it has no illumination, and uses predominantly ambient light to detect if an object is moving in front of the scanner. The scanner is expected to reside in a fixed position.

Whenever it detects activity in the field of view it will turn on the illumination and attempt to read a barcode. After reading the barcode the illumination will be default remain on for defined period, before it returns to idle state again.

Sensor-activated Mode

Note: Both Continuous Scan Mode and Sensor-activated Mode are referred to as “Hands free Modes. If the scanner's trigger is pulled when using a hands free mode, the scanner changes to manual trigger mode. Once the time-out value is reached, (if there have been no further trigger pulls) the scanner reverts to the original hands free mode.

Symbologies

Description

If you want to decode all the symbologies allowable for your scanner, scan the All Symbologies On symbol. If on the other hand, you want to decode only a particular symbology, scan All Symbologies Off followed by the On symbol for that particular symbology.

All Symbologies On/Off

For best scanner performance, we recommend you only enable the symbologies that you need. Scan All Symbologies Off to disable all symbologies, then enable the symbologies you need by scanning the On bar code for each symbology.

All Symbologies On

All Symbologies Off

Note: Even if All Symbologies Off is enabled, the scanner is still able to read configuration codes in Symbologies section.

UPC-A

UPC-A On/Off
