1336 FORCE™ AC Drive Availability Schedule Revision

The 1336 FORCE (1336T) was moved to an inactive stage on October 1, 2007 - Rockwell Automation, Inc. will no longer accept orders for new drive units. Rockwell Automation has been an industry leader in its commitment to long term customer support of drive products. This demonstrated commitment is unmatched in today's global drives market. This commitment is carried out in a variety of ways, including:

- Ongoing product migration to newer products - such as the PowerFlex 700S Phase II AC drive
- Extended product life cycles
- Parts and service support that extends well beyond new product availability
- "Custom Classics" production of discontinued products

The availability schedule for the 1336 FORCE AC drive is as follows:

- Date Inactive - October 1, 2007 - No new orders accepted
- Date Discontinued - October 2009*
- Date Obsoleted - October 2012*

* Date is forecasted based on spare parts on hand and includes repair and field services. This date could change without notice.

Product Description

1336 FORCE AC Drive

The 1336 FORCE AC Drive is the high performance member of the 1336 family. Its precise speed and torque control, flexible architecture, and communication capability make it ideal for controlling the most demanding applications.

Combining patented FORCE™ Technology, current regulated pulse width modulation (CRPWM), and microprocessors permits motor speed regulation within 0.001% and precise control of torque at all speeds.

The 1336 FORCE AC Drive shares many features with the 1336 PLUS and 1336 IMPACT AC drives including human interface, space-saving packaging, and communications capabilities. The IGBT power structure technology provides smooth current output to the motor, reducing motor heating.

PowerFlex 700S Phase II AC Drive

The PowerFlex® 700S Phase II AC drive, a version of PowerFlex 700 power platform, offers high performance drive control, advanced features and more built-in diagnostics for handling the most demanding drive applications.

The PowerFlex 700S with DriveLogix™ combines the powerful performance and flexible control of PowerFlex AC drives with the high-performance Logix engine to produce a highly functional, cost-effective drive and control solution.

Operation

1336 FORCE

- FORCE Technology, a patented technique of Field-Oriented Control, to achieve the high performance speed and torque control of an AC motor. FORCE Technology is the first AC motor control technology that can truly achieve dynamic “DC-like” performance.
- Speed and torque regulation capability without the need for an encoder. With the 1336 FORCE drive, switching from encoder-feedback to Encoderless Control is as simple as changing a parameter value. The FORCE Technology Encoderless Control expands the operating speed range from 40:1 up to 120:1 for standard AC motors. This improved speed/torque performance makes the drive suitable for a wide range of applications.
- An internal process trim regulator provides control of dancer, load cell, or other tension transducer devices, without the need for an external controller.
- Internal Logic Supply from DC Bus does not require separate control power wiring, and improves ride-through capability.

PowerFlex 700S

- Multiple high performance motor control algorithms: Flux Vector Control utilizes patented FORCE™ Technology for sensor and sensorless induction motor control and brushless permanent magnet motor operation, provide maximum application flexibility.
- An array of feedback options, including a standard incremental encoder, an optional incremental encoder, resolver, and high resolution encoder feedback interface cards optimize the accuracy of speed and position regulators. A Temposonics® and Stalh SSI interface for linear feedback devices are also available.
- An integrated position loop for applications from simple indexing to electronic line shaft.
- SynchLink™, a high performance, high speed, drive-to-drive link for transmitting synchronized drive and application data. The SynchLink fiber optic link provides the highest level of multiple drive coordination, with a 50µSec maximum transfer rate and multiple data configuration.
- Standard chopper transistor and separately mounted or drive mounted resistors provide cost effective dynamic braking solutions.

Application Solutions

1336 FORCE

The 1336 FORCE drive can be applied to specialized applications with cyclic or high inertia loads, impact loads that require fast response, or other demanding requirements. With available drive configurations that include Standalone, Common AC or Common DC Bus lineups, line regeneration, or dynamic braking or high performance systems – the 1336 FORCE drive handles many specialized applications with ease.

PowerFlex 700S

The PowerFlex 700S AC drive is ideally suited for high performance applications in a wide variety of industries including converting, paper, print, metals, material handling, automotive, etc. For consultation on high performance drive applications, Rockwell Automation's SupportPlus program uses expert level Rockwell Automation system engineers to support your engineering team.

- Selectable high performance motor control algorithms for maximum application flexibility within one drive
- Standard transistor and available drive-mounted (or separately mounted) braking resistor provide cost-effective dynamic brake options
- Multiple feedback options optimize the accuracy of speed and position regulators
- High speed 24V dc and 120V ac I/O and high resolution analog I/O provides application I/O flexibility
- Integrated position loop for positioning applications from indexing to electronic line shaft configurations
- SynchLink™ fiber optic link for the highest level of drive coordination and data transfer
- AC or DC common bus configurations for stand alone or multiple drive solutions
- Seven preset speeds with programmable control through digital inputs or communications
- User Function Library provides logic functions without a PLC

Drive Application Software

- Drive Application Software brings together an outstanding range of application experience and performance drive products to provide the user with pre-engineered and the most effective drive application solutions. For more information, refer to our web site: www.ab.com/drives/drvappsw

Start Up and Programming

1336 FORCE

- A Human Interface Module (HIM) provides programming, auto-tuning features, diagnostics and other information in full, easy to understand text. The standard display is a 2 line by 16 character backlit LCD screen. A Graphic Programming Terminal (GPT) is also available and provides a full numeric keypad, advanced parameter programming operations, and parameter upload/ download capabilities. The GPT HIM provides an 8 line by 40 character backlit supertwist LCD display.
- Auto-tuning eliminates the need for detailed motor parameter information by using information from the motor to tune both the speed and torque loops. Auto-tuning tests include: Motor Inertia, System Inertia, Motor Electrical Parameter, and separate regulator tuning.
- Integration with DriveExecutive™ software, for online/offline configuration and management of drives and drive peripherals and DriveObserver™ software, for real time trending of drive information.

PowerFlex 700S

- The PowerFlex 700S has optimized global voltage settings for quick configuration anywhere in the world. Multiple reset defaults make setup for your voltage/frequency fast and easy.
- An optional LCD Human Interface Module (HIM) provides programming, start up information, diagnostics and other information in full, easy to understand text. The display is a 7 line by 21 character backlit LCD screen. Four styles are available; full numeric keypad, operating and programming keys only and programming only.
- Flash upgrades for both the drive control and programmable DriveLogix, equip the designer with the ability to upgrade to the latest control features available.
- For simplified AC drive start-up and reduced development time, we've integrated the PowerFlex 700S Phase II drive configuration with RSLogix™ 5000 software. This single software approach simplifies parameter and tag programming while still allowing stand-alone drive software tool use on the factory floor.

Integrated Software

DriveTools™ SP Software

A powerful new PC based software suite, for programming, configuration and troubleshooting.

- DriveExecutive™ - for online/offline configuration and management of drives and drive peripherals.
- DriveObserver™ - for real time trending of drive information.

DriveExplorer™ Software

DriveExplorer software is an entry-level package providing basic functionality for programming and maintaining Rockwell Automation drives. DriveExplorer features Windows® Explorer-style navigation to make drive set-up easy and faster than using a Human Interface Module (HIM).

Product Highlights:

- Intuitive online editor with dialog-based parameter editing
- Upload and save information from individual devices for later downloads
- Upload and download all information in a drive and its peripherals for quick commissioning replacement or to duplicate drives
- Ability to flash update device firmware
- Control Bar tools for starting and stopping drives
- Print online or use the ‘Print to a Text File’ feature to print offline later
- Integrated HTML Help™ architecture
- Startup wizards simplify configuration process
- Custom views with desktop shortcuts
- Status view display shows drive status and process display items

DriveLogix

DriveLogix offers embedded Logix control for application programmability and control of auxiliary functions in one package, the PowerFlex 700S with DriveLogix.

- Common programming environment and multiple programming languages supported by all Logix platforms.
- Ladder Diagram, Function Block Diagram, Sequential Function Chart and Structured Text.
- Eight (8) separate tasks including one (1) continuous and seven (7) periodic. Each task can support up to 32 programs and an unlimited number of routines for program organization.
- 1.5 Mbytes of standard user memory.
- CompactFLASH™ for non-volatile storage.
- Local connections for up to sixteen (16) Compact I/O modules.
- Communication options include the RS-232 port and the same optional communication daughter cards used by the FlexLogix™ controller.
- Virtual backplane concept for program portability to other Logix platforms, seamless integration into the NetLinx architecture and direct drive communication.

RSLogix™ 5000

The PowerFlex 700S with DriveLogix utilizes RSLogix 5000, v13.0 or greater, with embedded DriveExecutive Lite for programming, configuration and troubleshooting the drive and embedded Logix controller.

- Single programming software package for the entire family of Logix 5000 products.
- Reduces learning curve between controllers.
- Multiple IEC1131-3 programming languages.
- Symbolic tag and structure data model.
- Integrated sequential and motion control.
- Power programming tools to increase productivity.

Communications

1336 FORCE

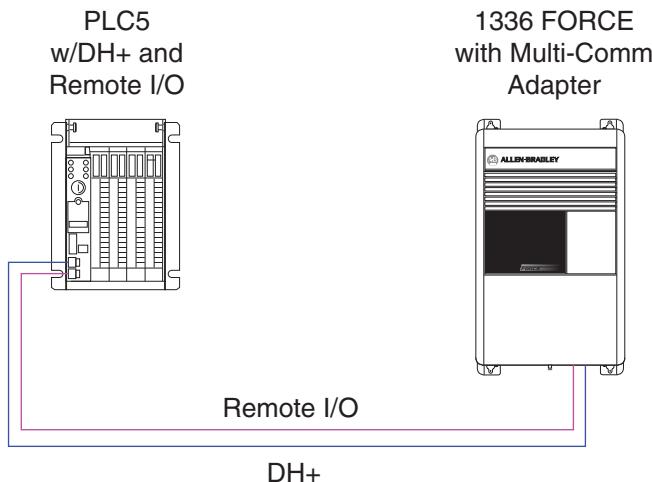

- Direct connection to Remote I/O provides a seamless digital interface to a PLC Controller.
- Direct connection to Data Highway Plus (DH+™) makes it possible to program and monitor the drive using DriveTools32™ programming software.
- Direct connection to ControlNet™ provides powerful function block programming capabilities and 4 real-time trend buffers.
- Digital Drive-to-Drive (D2D) Interface – A high speed interface that allows drives to share time-critical information.

PowerFlex 700S

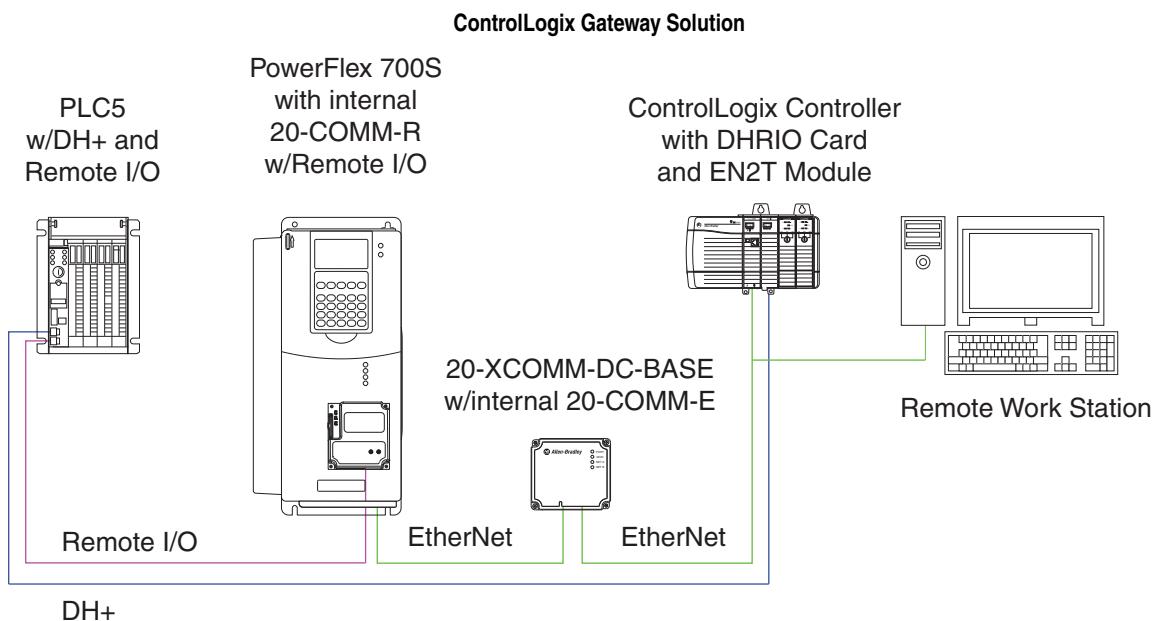

The Allen-Bradley PowerFlex family of drives utilizes Rockwell Automation's NetLinx Open Network Architecture. This provides the common set of features and services for DeviceNet™, ControlNet™, and EtherNet/IP™ networks resulting in lower total cost of ownership. Users can easily manage information from shop floor to top floor and seamlessly integrate their complete system as they control, configure, and collect data.

- PowerFlex drives offer internal communication options helping the user to cost-effectively assemble highly integrated applications. Options include: DeviceNet, ControlNet, Universal Remote I/O™, and other open communications including PROFIBUS™ DP and Interbus™.
- Status indicators for all internal communications options are visible on the cover for easy set-up and monitoring of drive communications.

Typical 1336 FORCE Network Configuration

Recommended Network Configuration Migration with PowerFlex 700S Phase II Drive

1336T FORCE to PowerFlex 700S Network Migration Solutions

Option Type:	Hardware Required:	Benefits:	Trade-Offs:
ControlLogix Gateway	<ul style="list-style-type: none"> • ControlLogix Chassis • 20-COMM-R (in drive) • 20-COMM-E (in box) • 1756-EN2T or -ENBT • 1756-DHRIO Card • 20-XCOMM-DC-BASE • Ext. 24V DC supply • DIN rail to support - BASE & supply 	<ol style="list-style-type: none"> 1) Fastest data throughput 2) Positions the system for future use with high-end communication networks 3) Can now use DriveTools SP to go online with the drive and connected peripheral(s) 4) Additional network flexibility 	<ol style="list-style-type: none"> 1) Expensive 2) Requires more mounting space 3) Must install new wiring 4) Need to convert PLC-5 program to work with ControlLogix 5) Need to train personal on how to use the new hardware

Option Type:	Hardware Required:	Benefits:	Trade-Offs:
Add EtherNet to PLC-5®	<ul style="list-style-type: none"> • Ethernet Side-card • 20-COMM-R (in drive) • 20-COMM-E (in box) • 20-XCOMM-DC-BASE • Ext. 24V DC supply • DIN rail to support 20-XCOMM-DC-BASE & Ext. 24V DC supply • Ethernet cables 	<ol style="list-style-type: none"> 1) Positions the system for future use with high-end communication networks 2) Faster data throughput 3) Additional network flexibility 4) Can now use DriveTools SP to go online with the drive and connected peripheral(s) 	<ol style="list-style-type: none"> 1) Expensive 2) Requires more mounting space 3) Must install new wiring 4) Need to modify existing PLC-5 program
Datalink Gateway	<ul style="list-style-type: none"> • Datalink module w/ DH+ upgrade • 20-COMM-S (in box) • 20-COMM-R (in drive) • 20-XCOMM-DC-BASE • Ext. 24V DC supply • DIN rail to support 20-XCOMM-DC-BASE & Ext. 24V DC supply 	<ol style="list-style-type: none"> 1) Can use existing DH+ cabling for connection to 20-COMM-S 	<ol style="list-style-type: none"> 1) Expensive 2) Requires more mounting space 3) Need to modify existing PLC-5 program 4) Slow data throughput (38.4Kbps max) 5) Need to rely on 3rd-Party (Datalink) to update firmware in future 6) Still using old comm. technology 7) Need 3rd-Party (Datalink) to update firmware to support PCCC messaging for DriveTools SP 8) Need a separate power source for Datalink gateway (range is 9 to 24V DC only)

PowerFlex 700S Phase II AC Drive Support

Rockwell Automation is committed to maintaining and supporting Allen-Bradley drives and installations. Included in this commitment is start-up support and consultation for drive applications.

ProtectionPlus Drive Start-Up

With ProtectionPlus Drive Start-Up Services from Rockwell Automation, users can leverage the extensive product and industry experience of Rockwell Automation technicians to quickly commission drives and reduce the time between integration and actual start-up.

ProtectionPlus Drive Start-Up Services verify drive installation to ensure proper electrical, mechanical and environmental criteria are met. This includes verification of power and I/O wiring to the drive, custom drive configuration/tuning to meet application specific requirements, and diagnosing/troubleshooting problems that occur during a standalone drive start-up. ProtectionPlus can also extend an eligible product parts warranty and add a labor warranty. For more information about ProtectionPlus Drive Services, contact your local Rockwell Automation sales office or authorized distributor, or visit: <http://support.rockwellautomation.com/SupportPrograms/>.

SupportPlus

For consultation on high performance drive applications, the SupportPlus program is offered. SupportPlus uses expert level Rockwell Automation system engineers to support the user's engineering team. SupportPlus engineers will work with the end user to layout the appropriate architecture, configure drives, recommend programming techniques and provide application assistance on the most effective ways to implement the control solution.

For more information, please call 262-512-8176 or refer to www.ab.com/support/abdrives.

Table A Power Terminal Designations

Terminal	Description
PE $\frac{1}{\pm}$	Potential Earth Ground
TE $\frac{1}{\pm}$	True Earth Ground
R (L1), S (L2), T (L3)	AC Line Input Terminals
+DC, -DC	DC Bus Terminals
U (T1), V (T2), W (T3)	Motor Connection

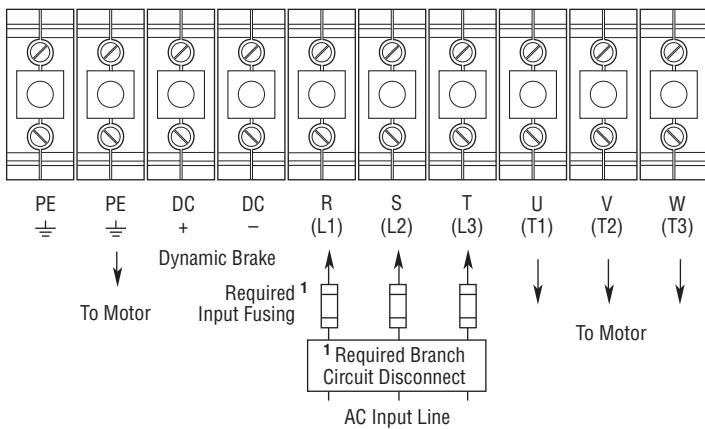

Frame B1 Power Terminal Block

200-240V, 0.75-5.5 kW (1-7.5 HP)
380-480/500-600V, 0.75-11 kW (1-15 HP)

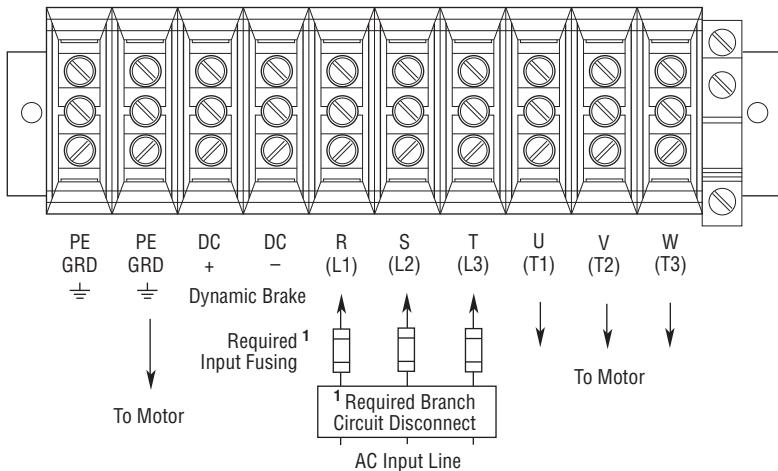

Frame B2 Power Terminal Block

200-240V, 7.5-11 kW (10-15 HP)
380-480V, 15-22 kW (20-30 HP)
500-600V, 15 kW (20 HP)

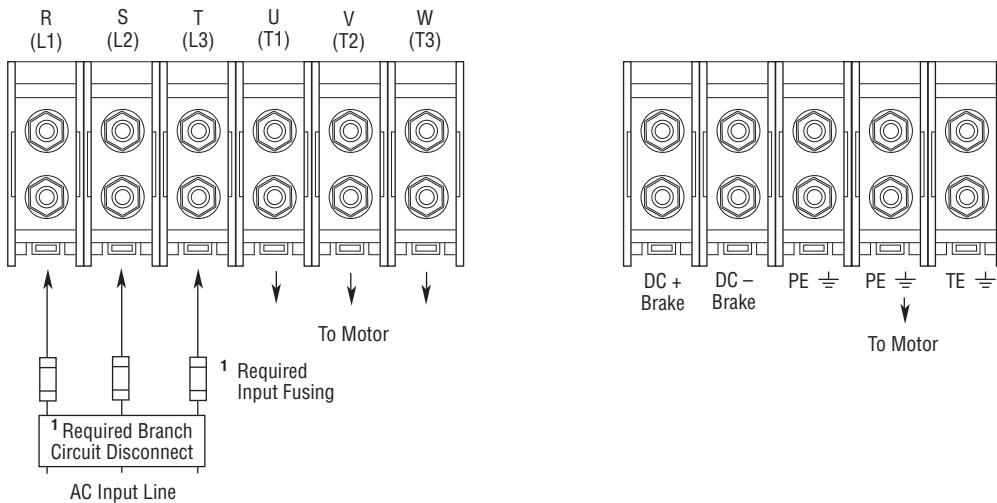

Frame C Power Terminal Block

200-240V, 15-22 kW (20-30 HP)
 380-480V, 30-45 kW (40-60 HP)
 500-600V, 18.5-45 kW (25-60 HP)

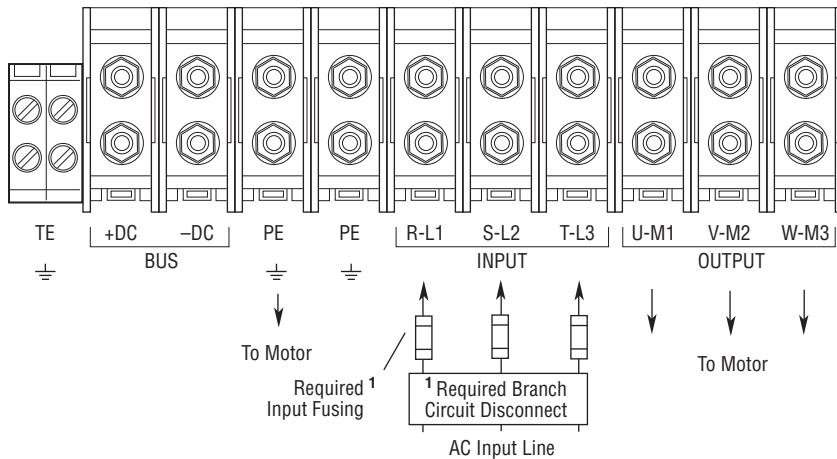

Frame D Power Terminal Block

200-240V, 30-45 kW (40-60 HP)
 380-480V, 45-112 kW (60-150 HP)
 500-600V, 56-112 kW (75-150 HP)

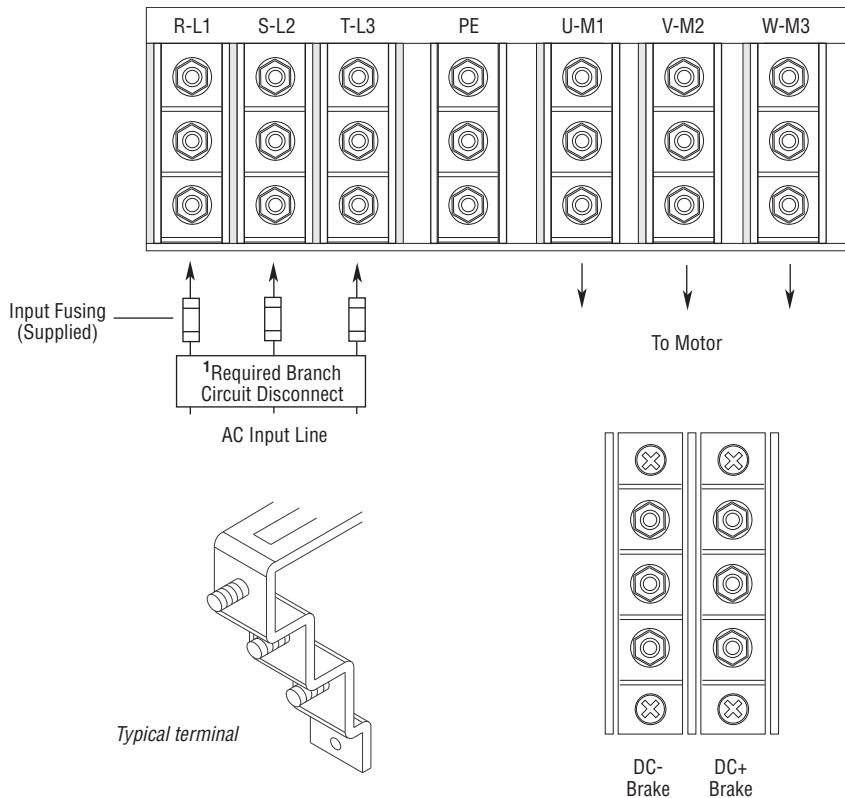

Frame E Power Terminal Block

200-240V, 56-75 kW (75-100 HP)
 380-480V, 112-187 kW (150-250 HP)
 500-600V, 112-149 kW (150-200 HP)

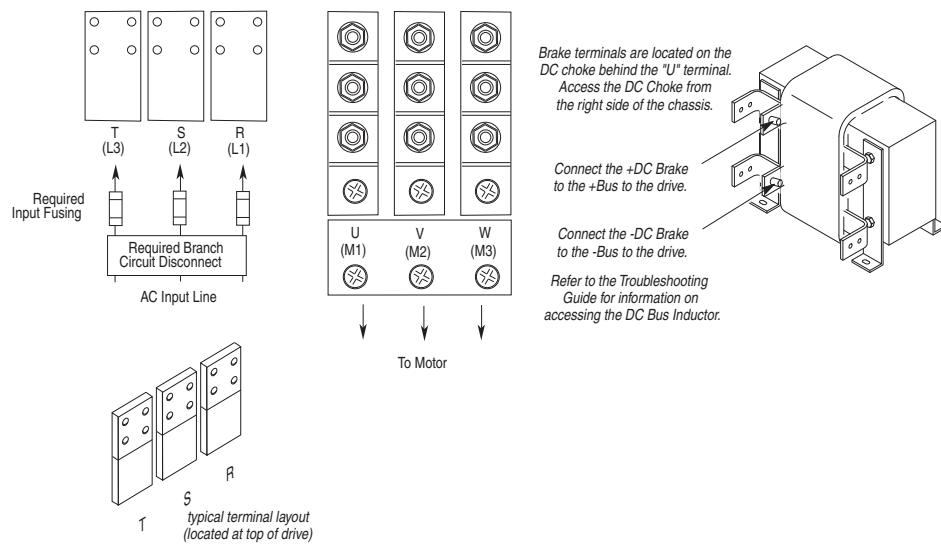

Frame F Power Terminal Block

380-480V, 187-336 kW (250-450 HP)

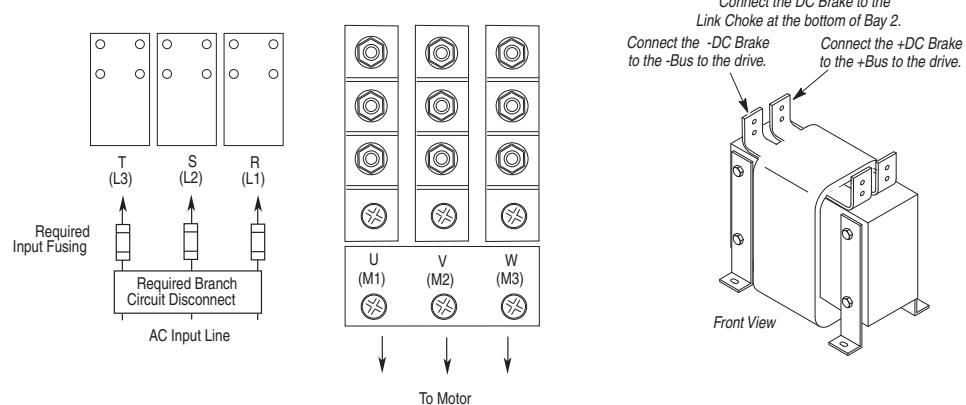

Frame G Power Terminal Block

380-480V, 224-448 kW (300-600 HP)
500-600V, 187-485 kW (250-650 HP)

Frame H Power Terminal Block

380-480V, 522-597 kW (700-800 HP)
500-600V, 522-597 kW (700-800 HP)

Power Terminal Block Locations

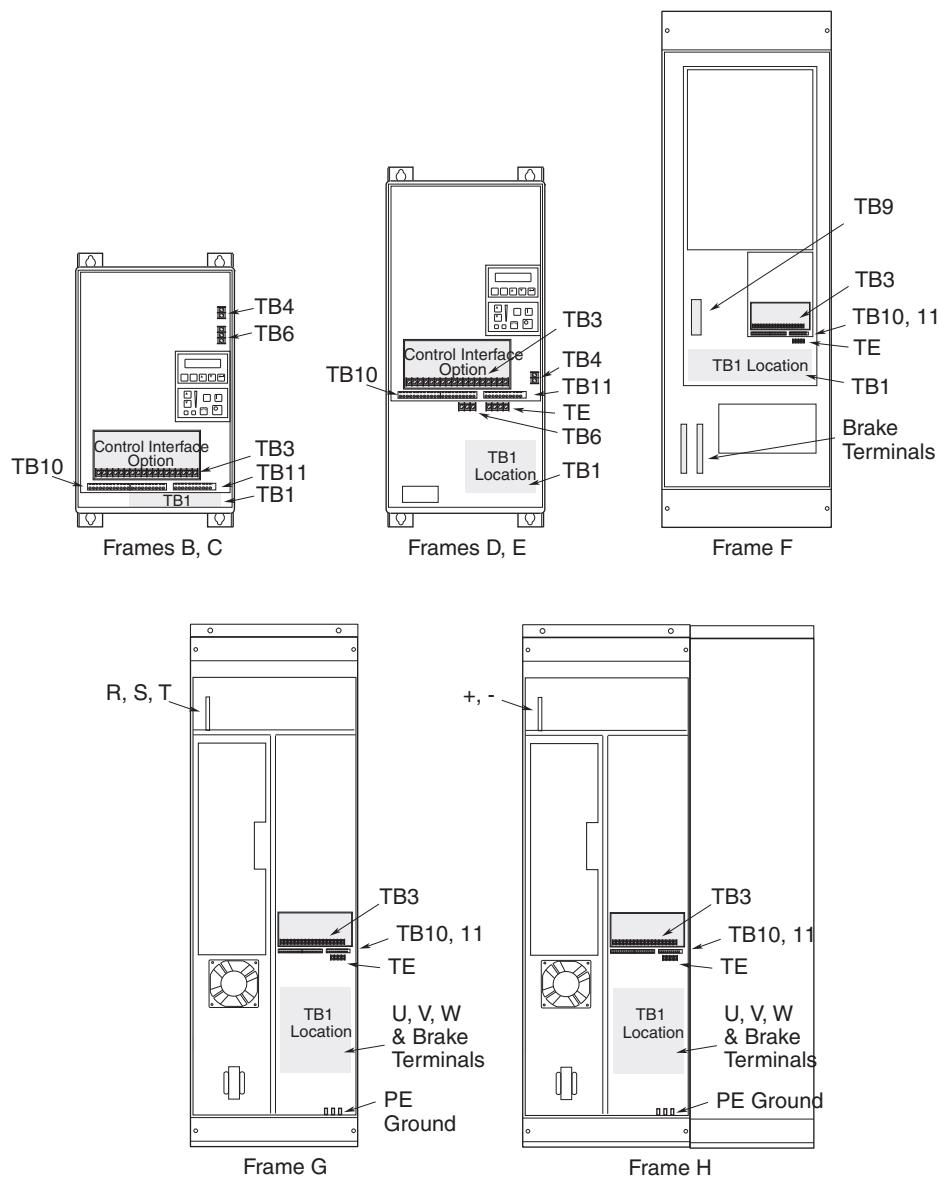

Table B Terminal Block Designations

Terminal Block	Description
TB1	Power Terminal Block
TB2	Control & Signal Wiring
TB3	Control Interface Option
TB4	24V DC Auxiliary Input
TB6	High Voltage DC Auxiliary Input
TB9	480 or 600V Auxiliary Output (F Frame Only)
TE	Control & Signal Shield Terminals

Table C Power Terminal Block (TB1) Specifications

Drive Frame Size	Max./Min. Wire Size (4) mm ² (AWG)	Maximum Torque N·m (lb.-in.)
B1	8.4/0.8 (8/18)	1.81 (16)
B2	13.3/0.5 (6/20)	1.70 (15)
C	26.7/0.8 (3/18)	5.65 (50)
D (1), (2)	120.0/2.1 (40/14) 67.4/2.1 (00/14) (5)	6.00 (52) 6.00 (52)
E (1), (3)	253.0/2.1 (500 MCM/14)	10.00 (87)
F (1)	303.6/2.1 (600 MCM/14)	23.00 (200)
G (1)	303.6/2.1 (600 MCM/14)	23.00 (200)

- (1) These configurations of TB1 are stud type terminations and require the use of lug type connectors to terminate field installed conductors. Lug kits are available for use with these configurations. Wire size used is determined by selecting the proper lug based on the drive catalog number.
- (2) One TE terminal is present – Max./Min. Wire Size is the same as other terminals.
- (3) Two TE terminals are present – Max./Min. Wire Size is the same as the D Frame terminal block.
- (4) Wire sizes given are maximum/minimum sizes that TB1 will accept - these are not recommendations. Use Copper wire only. Wire gauge requirements and recommendations are based on 75 degree C. Do not reduce wire gauge when using higher temperature wire.
- (5) Applies to 30 kW (40 HP) 200-240V, 45 & 56 kW (60 & 75 HP) 380-480V, 56 kW (75 HP) 500-600V drives only.

5	Cable Clamp for Strain Relief					

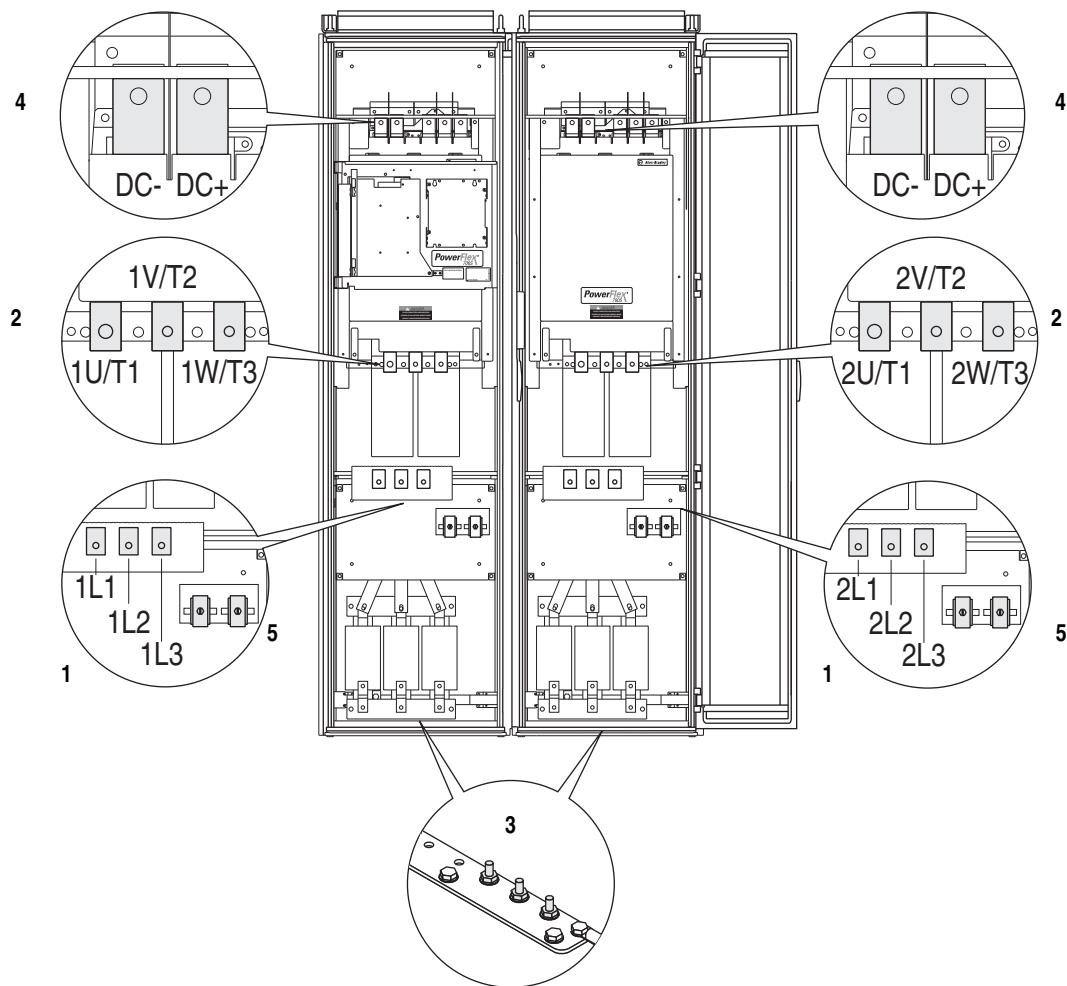

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations.

(2) Do Not exceed maximum wire size. Parallel connections may be required.

(3) These connections are bus bar type terminations and require the use of lug type connectors.

(4) Apply counter torque to the nut on the other side of terminations when tightening or loosening the terminal bolt in order to avoid damage to the terminal.

Control Terminals

PowerFlex 700S

Table D TB1 Terminals

Terminal	Signal	Factory Default	Description	Related Params
1	Analog Input 1 Comm.	(Volt)	Bipolar, differential input, +/-10V, 0-20 mA, 13 bit + sign 20k Ohm impedance at Volt; 500 Ohm impedance at mA (1)	800
2	Analog Input 1 (+/-)			
3	Shield	NA	Analog Input Shield	
4	Analog Input 2 Comm.	(Volt)	Bipolar, differential input, +/-10V, 0-20 mA, 13 bit + sign 20k Ohm impedance at Volt; 500 Ohm impedance at mA (1)	806
5	Analog Input 2 (+/-)			
6	Analog Input 3 [NTC-] Comm.	(Volt)	Differential input, 0-10V, 10 bit (for motor control mode FOC2, this is the temperature adaptation input). (1)	812
7	Analog Input 3 [NTC+]			
8	Shield	NA	Analog Output Shield	
9	Analog Output 1 (-)	(Volt)	Bipolar, differential output, +/-10V, 0-20 mA, 11 bit + sign 2k Ohm minimum load	832, 833
10	Analog Output 1 (+)			
11	Analog Output 2 (-)	(Volt)		839, 840
12	Analog Output 2 (+)			
13	+10V Reference	NA	Rating: 20 mA maximum load (Recommend 5k Ohm pot)	
14	Reference Common	NA		
15	-10V Reference	NA		
16	Encoder A	NA	Normal current draw per channel: 20 mA	230 - 234
17	Encoder A (Not)	NA		
18	Encoder B	NA		
19	Encoder B (Not)	NA		
20	Encoder Z	NA		
21	Encoder Z (Not)	NA		
22	Encoder Reference (+)	NA	12 or 5V DC power supply for primary encoder interface Rating: 300 mA maximum	
23	Encoder Reference (-)	NA		
24	Encoder Shield	NA	Connection point for encoder shield	

(1) The Analog inputs are not isolated. However, the analog inputs can be connected in series when using current mode. Note that at 20mA the voltage source must be capable of providing 10V dc at the drive terminals for one drive -- 20V dc is required for two drives and 30V dc is required for three drives, etc.

Table E TB2 Terminals

Terminal	Signal	Factory Default	Description	Related Params
1	24V DC Common (-)	NA	Drive supplied 24V DC logic input power	
2	24V DC Source (+)	NA	Rating: 300 mA maximum load	
3	Digital Output 1		24V DC Open Collector (sinking logic) Rating: Internal Source = 150 mA max. External Source = 750 mA	846, 847
4	Digital Output 1/2 Com	NA	Common for Digital Output 1 & 2	
5	Digital Output 2		24V DC Open Collector (sinking logic) Rating: Internal Source = 150 mA max. External Source = 750 mA	851, 852
6	Relay Output 3 (NC)		Relay contact output	856, 857
7	Relay Output 3 Com	NA	Rating: 115V AC or 24V DC = 2 A max.	
8	Relay Output 3 (NO)		Inductive/Resistive	
9	Digital Input 1-3 Com	NA	Common for Digital Inputs 1-3	
10	Digital Input 1		High speed 12-24V DC sourcing Digital Input	825
11	Digital Input 2		Load: 15 mA at 24V DC	826
12	Digital Input 3		Load: 15 mA at 24V DC sourcing	827
13	Digital Input 4-6 Com	NA	Common for Digital Inputs 4-6	
14	Digital Input 4		Load: 10 mA at 24V DC sinking/sourcing	828
15	Digital Input 5		Load: 7.5 mA at 115V AC	829
16	Digital Input 6	HW Enable	Note: The 115 VAC Digital Inputs can withstand 2 millamps of leakage current without turning on. If an output device has a leakage current greater than 2 millamps a burden resistor is required. A 68.1K ohm resistor with a 0.5 watt rating should be used to keep the 115 VAC output below 2 millamps.	830

Cable Recommendations - Power

Unshielded Cable

THHN, THWN or similar wire is acceptable for drive installation in dry environments provided adequate free air space and/or conduit fill rates limits are provided. **Do not use THHN or similarly coated wire in wet areas.** Any wire chosen must have a minimum insulation thickness of 15 Mils and should not have large variations in insulation concentricity.

Shielded Cable

Shielded cable contains all of the general benefits of multi-conductor cable with the added benefit of a copper braided shield that can contain much of the noise generated by a typical AC Drive. Strong consideration for shielded cable should be given in installations with sensitive equipment such as weigh scales, capacitive proximity switches and other devices that may be affected by electrical noise in the distribution system. Applications with large numbers of drives in a similar location, imposed EMC regulations or a high degree of communications/ networking are also good candidates for shielded cable.

Shielded cable may also help reduce shaft voltage and induced bearing currents for some applications. In addition, the increased impedance of shielded cable may help extend the distance that the motor can be located from the drive without the addition of motor protective devices such as terminator networks. Refer to “Reflected Wave” in publication DRIVES-IN001..., *Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives*.

Consideration should be given to all of the general specifications dictated by the environment of the installation, including temperature, flexibility, moisture characteristics and chemical resistance. In addition, a braided shield should be included and be specified by the cable manufacturer as having coverage of at least 75%. An additional foil shield can greatly improve noise containment.

A good example of recommended cable is Belden® 295xx (xx determines gauge). This cable has four (4) XLPE insulated conductors with a 100% coverage foil and an 85% coverage copper braided shield (with drain wire) surrounded by a PVC jacket.

Other types of shielded cable are available, but the selection of these types may limit the allowable cable length. Particularly, some of the newer cables twist 4 conductors of THHN wire and wrap them tightly with a foil shield. This construction can greatly increase the cable charging current required and reduce the overall drive performance. Unless specified in the individual distance tables as tested with the drive, these cables are not recommended and their performance against the lead length limits supplied is not known.

Armored Cable

Cable with continuous aluminum armor is often recommended in drive system applications or specific industries. It offers most of the advantages of standard shielded cable and also combines considerable mechanical strength and resistance to moisture. It can be installed in concealed and exposed manners and removes the requirement for conduit (EMT) in the installation. It can also be directly buried or embedded in concrete.

Because noise containment can be affected by incidental grounding of the armor to building steel (see Chapter 2, “Wire Types,” of publication DRIVES-IN001..., *Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives*) when the cable is mounted, it is recommended the armored cable have an overall PVC jacket.

Interlocked armor is acceptable for shorter cable runs, but continuous welded armor is preferred.

Best performance is achieved with 3 spaced ground conductors, but acceptable performance below 200 HP is provided via a single ground conductor.

Table F Recommended Shielded/Armored Cable

Location	Rating/Type	Description
Standard (Option 1)	600V, 90° C (194° F) XHHW2/RHW-2 Anixter B209500-B209507, Belden 29501-29507, or equivalent	Four tinned copper conductors with XLPE insulation. Copper braid/aluminum foil combination shield and tinned copper drain wire. PVC jacket.
Standard (Option 2)	Tray rated 600V, 90° C (194° F) RHH/RHW-2 Anixter OLF-7xxxx or equivalent	Three tinned copper conductors with XLPE insulation. 5 mil single helical copper tape (25% overlap min.) with three bare copper grounds in contact with shield. PVC jacket.
Class I & II; Division I & II	Tray rated 600V, 90° C (194° F) RHH/RHW-2 Anixter 7V-7xxxx-3G or equivalent	Three bare copper conductors with XLPE insulation and impervious corrugated continuously welded aluminum armor. Black sunlight resistant PVC jacket overall. Three copper grounds on #10 AWG and smaller.

Cable Recommendations - Control

Table G Recommended Control Wire

Type	Wire Type(s)	Description	Insulation Rating
Digital I/O	Un-shielded	Per US NEC or applicable national or local code	300V, 60° C (140° F), Minimum
	Shielded	Multi-conductor shielded cable such as Belden 8770 (or equiv.)	
Standard Analog I/O	Belden 8760/9460 (or equiv.)	0.750 mm ² (18 AWG), twisted pair, 100% shield with drain ⁽⁵⁾ .	300V, 75-90 °C (167-194 °F)
Remote Pot	Belden 8770 (or equiv.)	0.750 mm ² (18 AWG), 3 cond., shielded	
Encoder/Pulse I/O Less 30.5 m (100 ft.)	Combined:	Belden 9730 (or equivalent) ⁽¹⁾	0.196 mm ² (24 AWG), individually shielded.
Encoder/Pulse I/O 30.5 m (100 ft.) to 152.4 m (500 ft.)	Signal:	Belden 9730/9728 (or equivalent) ⁽¹⁾	0.196 mm ² (24 AWG), individually shielded.
	Power:	Belden 8790 ⁽²⁾	0.750 mm ² (18 AWG)
	Combined:	Belden 9892 ⁽³⁾	0.330 mm ² or 0.500 mm ² ⁽³⁾
Encoder/Pulse I/O 152.4 m (500 ft.) to 259.1 m (850 ft.)	Signal:	Belden 9730/9728 (or equivalent) ⁽¹⁾	0.196 mm ² (24 AWG), individually shielded.
	Power:	Belden 8790 ⁽²⁾	0.750 mm ² (18 AWG)
	Combined:	Belden 9773/9774 (or equivalent) ⁽⁴⁾	0.750 mm ² (18 AWG), individually shielded pair.
Stegmann Encoder	Stegmann 6-411682-xx cables with C12 FUR connections		
Resolver	Paige 412081 (or equiv.) Twist, capacitance, inductance and resistance specifications equal to or greater than cable specified	0.750 =mm ² (18 AWG), twisted pair	300V, 80° C (176° F) minimum
SynchLink	Versalink V-System, Lucent Technologies, Specialty Fibers Technology Division 1403-CF BLK	200/230 micron HCS (Hard Clad Silica) 650 nm (Red) Data Rate 5 Mbps	
EMC Compliance	Refer to position "i" - Emission of the Catalog Number Explanation on Page 11 for details.		

⁽¹⁾Belden 9730 is 3 individually shielded pairs (2 channel plus power). If 3 channel is required, use Belden 9728 (or equivalent).

⁽²⁾Belden 8790 is 1 shielded pair.

⁽³⁾Belden 9892 is 3 individually shielded pairs (3 channel), 0.33 mm² (22 AWG) plus 1 shielded pair 0.5 mm² (20 AWG) for power.

⁽⁴⁾Belden 9773 is 3 individually shielded pairs (2 channel plus power). If 3 channel is required, use Belden 9774 (or equivalent).

⁽⁵⁾If the wires are short and contained within a cabinet which has no sensitive circuits, the use of shielded wire may not be necessary, but is always recommended.

Cable Length Restrictions

Important: In the following tables, A “●” in any of the latter columns will indicate that this drive rating can be used with an Allen-Bradley Terminator (1204-TFA1/1204-TFB2) and/or Reflected Wave Reduction Device with Common Mode Choke (1204-RWC-17) or without choke (1204-RWR2).

For the Terminator, the maximum cable length is 182.9 meters (600 feet) for 400/480/600V drives (not 690V). The PWM frequency must be 2 kHz. The 1204-TFA1 can be used only on low HP (below 5 HP), while the 1204-TFB2 can be used from 2-800 HP.

1204 Reflected Wave Reduction Device (all motor insulation classes):

- 1204-RWR2-09
2kHz: 182.9m (600 ft.) at 400/480V and 121.9m (400 ft.) at 600V. 4 kHz: 91.4m (300 ft.) at 400/480V and 61.0m (200 ft.) at 600V.
- 1204-RWC-17
2 kHz: 365.8m (1200 ft.) at 400/480/600V. 4 kHz: 243.8m (800 ft.) at 400/480V and 121.9m (400 ft.) at 600V.

For both devices, power dissipation in the damping resistor limits maximum cable length.

The 1321-RWR is a complete reflected wave reduction solution available for many of the PowerFlex drives. If available, a 1321-RWR catalog number will be indicated in the “Reactor/RWR” column. When not available, use the reactor and resistor information provided to build a solution. For more information, refer to the following:

For Further Information on ...	see Publication ...

(1) Frame 12 drives have dual inverters and require two output reactors. The resistor ratings are per phase values for each reactor.

(2) Some Frame 13 drives require two output reactors to match drive amp rating. The resistor ratings are per phase values for each reactor.

(3) Resistor specification is based on two cables per phase.

(4) Resistor specification is based on three cables per phase.

(5) Resistor specification is based on four cables per phase.

Packaging and Mounting

1336 FORCE

- Small size conserves expensive panel space.
- “Planar Construction” eliminates most internal cables and connectors. Increases reliability.
- Laminar Bus Design reduces internal inductance, thereby reducing snubber losses and improving IGBT performance.
- Common Human Interface Module provides simplicity of programming and flexibility of operation.
- Thermal Dissipation Management design and extensive infra-red testing minimizes hot spots to maximize reliability.
- NEMA and International standards designed for global acceptability.
- Common AC/DC Bus accommodates both stand alone and common bus using standard Bulletin 2362 Motor Control Center (MCC) vertical sections.
- Adapter Board Interface allows you to change the personality of the drive based on application.

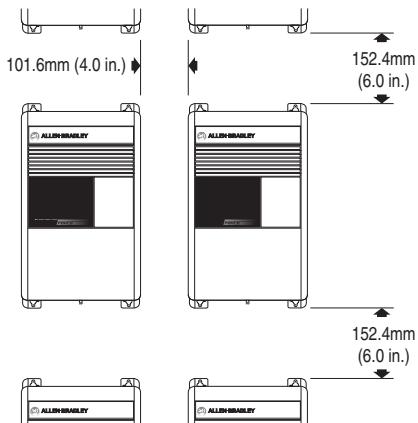

PowerFlex 700S

- The innovative bookshelf design allows Zero Stacking™ or side-by-side mounting of the drives. With no minimum spacing required between drives, valuable panel space is conserved and installation cost is reduced.
- The design of the PowerFlex® family of drives incorporates proven noise reduction components on both the input and output of the drive. Many of the global EMC standards can be met and many noise related application concerns can be reduced or eliminated using a standard “out-of-the-box” PowerFlex drive with no additional hardware or cost. By also incorporating higher rated components and significant voltage suppression devices for both phase-to-phase and phase-to-ground protection, power conditioning concerns and the need for additional hardware are significantly reduced.
- Pull-apart control terminal blocks for easy wiring and quick disconnect.
- Scalable hardware options include feedback and communications.

Minimum Mounting Clearances

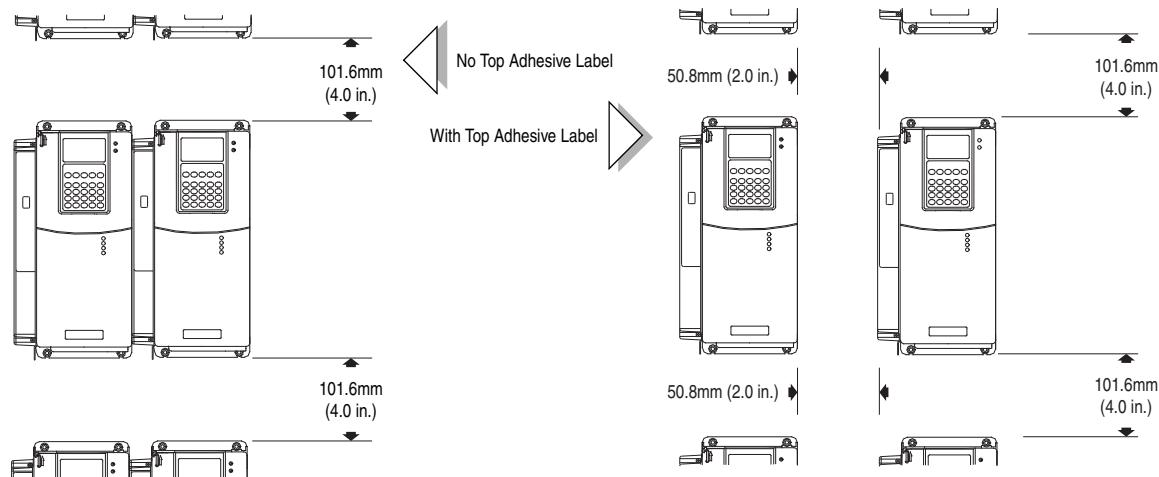

1336 FORCE All Frames

Important: F & G Frame drives require a minimum of 152.4 mm (6.0 in.) between the drive back and mounting wall, if drives are mounted with sides touching another device or wall. A minimum of 76.2 mm (3.0 in.) is required on the sides if the back of the drive is mounted against a wall or other device.

Environment Altitude:		1000 m (3300 ft) max. without derating.	1000 m (3300 ft.) max. without derating.	
Surrounding Air Temp. without Derating:				
IP00, Open Type:	0 to 50° C (32 to 122° F)	0 to 50° C (32 to 122° F)	Based on drive rating.	
IP20, NEMA Type 1:	0 to 40° C (32 to 104° F)	0 to 40° C (32 to 104° F)	Based on drive rating.	
IP56, NEMA Type 4X:	—	0 to 40° C (32 to 104° F)	Based on drive rating.	
IP65, NEMA Type 4	0 to 40° C (32 to 104° F)	—	Frames 9 & 10: 0 to 40 °C (32 to 104 °F) surrounding air.	
Storage Temperature (all const.):	-40 to 70° C (-40 to 158° F)	-40 to 70° C (-40 to 158° F)	—	—
Relative Humidity:	5 to 95% non-condensing	5 to 95% non-condensing		
Shock:	15G peak for 11ms duration (± 1.0 ms)	10G peak for 11 ms duration (± 1.0 ms)		
Vibration:	0.152 mm (0.006 in.) displacement, 1G peak	0.152 mm (0.006 in.) displacement, 1G peak, 5.5 Hz		
Sound	—	Frame Fan Speed Sound Level	Note: Sound pressure level is measured at 2 meters.	Background Noise Level
		1 30 CFM 59 dB	9 78 49	
		2 50 CFM 57 dB	10 77 49	measured at 1 meter. All devices measured are 400V IP21, and in power up mode.
		3 120 CFM 61 dB	13 76 46	
		4 190 CFM 59 dB		
		5 200 CFM 71 dB		
		6 300 CFM 72 dB		
Atmosphere	—		Important: Drive <u>must not</u> be installed in an area where the ambient atmosphere contains volatile or corrosive gas, vapors or dust. If the drive is not going to be installed for a period of time, it must be stored in an area where it will not be exposed to a corrosive atmosphere.	
Electrical	AC Input Voltage Tolerance:	$\pm 10\%$ of minimum/maximum	See PowerFlex 700S Input Voltage Range/Tolerance on page 52 for Full Power and Operating Range	
	Frequency Tolerance:	48-62 Hz.	47-63 Hz	
	Input Phases:	Three-phase input provides full rating for all drives. Single-phase operation provides 50% of rated current.	Three-phase input provides full rating for all drives. Single-phase operation provides 50% of rated current.	
DC Input Voltage Tolerance	—		$\pm 10\%$ of Nominal Bus Voltage (above) 0.98 across speed range	
	Displacement Power Factor:	5.5-59 kW (7.5-800 HP); 0.95		
	Efficiency:	97.5% at rated amps, nominal line volts.	97.5% at rated amps, nominal line volts.	
	Max. Short Circuit Current Rating:	$\geq 200,000$ Amps, 600V, using recommended fuse or circuit breaker type.	$\geq 200,000$ Amps, using recommended fuse or circuit breaker type.	
	Maximum Drive to Motor Power Ratio	—	The drive to motor rating cannot exceed a 2:1 ratio

Siegmann Option:	—		11.5V/DC @ 130 mA Sine/Cosine 1V P-P Offset 2.5 182 m (600 ft.)																																																																																																																																								
Encoder Volt. Supply:			Hi-Resolution Fdbk.: Max. Cable Length: RS-485 Interface:	Hi-Resolution Feedback Option card obtains the following information via the Hiperface RS-485 interface shortly after power-up: Address, Command Number, Mode, Number of turns, Number of Sine/Cos cycles, Checksum																																																																																																																																							
Hi-Res:			Customer-I/O Plug (P1) - Hi Res:	Allen-Bradley PN: S94262912 Weidmuller PN: Bl3.50/90/12BK																																																																																																																																							
Resolver Option:	—		Excitation Frequency: Excitation Voltage: Operating Freq. Range: Resolver Fdbk Voltage: Max. Cable Length:	2400 Hz 4.25-26 Vrms 1 - 10 kHz 2V ± 300 mV 304.8 meters (1000 ft.)																																																																																																																																							

Category	Specification	1336 FORCE Drive	PowerFlex 700S Phase II Drive Frames 1-6 (690V Drive frames 5 & 6 only)	PowerFlex 700S Phase II Drive Frames 9 & up
DriveLogix	User Available Memory/Base:	—	1.5 megabytes	
	Battery:		1769-BA 0.59g lithium	
	Serial Cable:		1761-CB1PM02 to 1761-NET-AIC 1761-CB1PA00 to 1761-NET-AIC 1756-CP3 directly to controller 1747-CP3 directly to controller	
	Compact I/O Connection:	category 3 (2) Up to (16) modules		
	Cable:	20D-DL2-CL3, 20D-DL2-CR3		

PowerFlex 700S Input Voltage Range/Tolerance

Drive Rating	Nominal Line Voltage	Nominal Motor Voltage	Drive Full Power Range	Drive Operating Range
200-240	200	200†	200-264	180-264
	208	208	208-264	
	240	230	230-264	
380-400	380	380†	380-528	342-528
	400	400	400-528	
	480	460	460-528	
500-600 (Frames 1-4 Only)	600	575†	575-660	432-660
500-690 (Frames 5 & 6 Only)	600	575†	575-660	475-759
	690	690	690-759	475-759

Drive Full Power Range = Nominal Motor Voltage to Drive Rated Voltage + 10%.
Rated current is available across the entire Drive Full Power Range

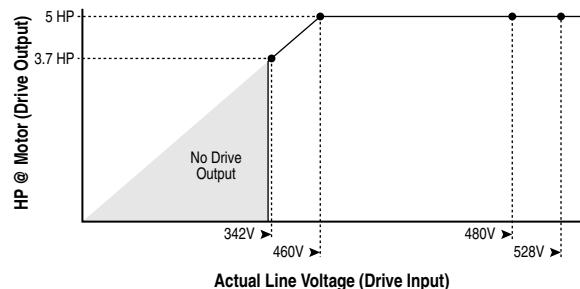

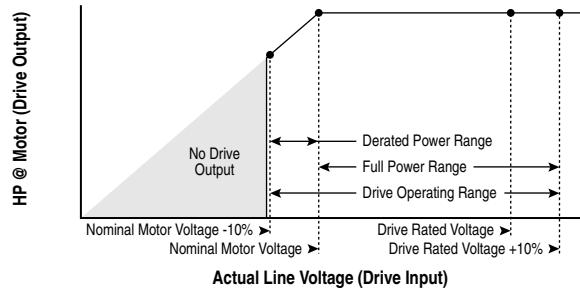

Drive Operating Range = Lowest† Nominal Motor Voltage - 10% to Drive Rated Voltage + 10%.
Drive Output is linearly derated when Actual Line Voltage is less than the Nominal Motor Voltage

Example:

Calculate the maximum power of a 5 HP, 460V motor connected to a 480V rated drive supplied with 342V Actual Line Voltage input.

- Actual Line Voltage / Nominal Motor Voltage = 74.3%
- $74.3\% \times 5 \text{ HP} = 3.7 \text{ HP}$
- $74.3\% \times 60 \text{ Hz} = 44.6 \text{ Hz}$

At 342V Actual Line Voltage, the maximum power the 5 HP, 460V motor can produce is 3.7 HP at 44.6 Hz.
