

# Installation Guide

## WiFi 6 AX1800 Dual Band PoE Access Point Model WAX214

## Package contents

**Note:** Power up your WAX214 by connecting it to a PoE or PoE+ switch. As an option, you can order a 12V, 1.5A power adapter. For more information about the power adapter, see [netgear.com/support](https://www.netgear.com/support).

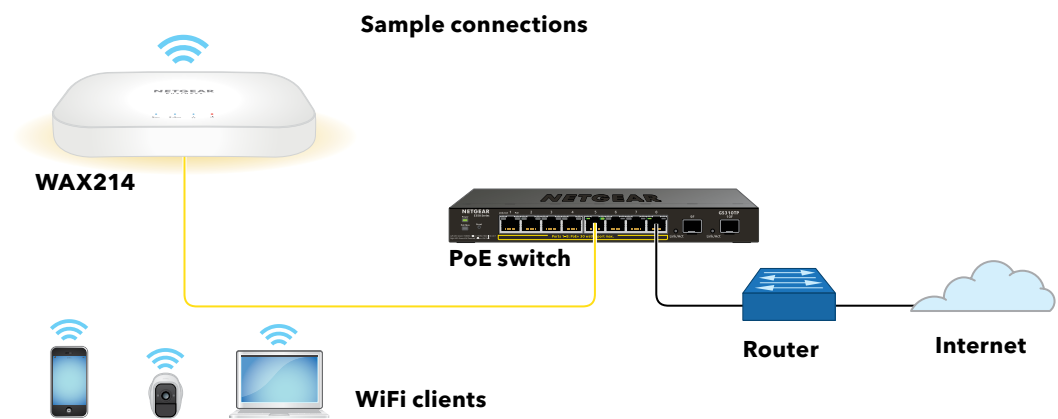

## Overview

## Step 1. Connect the WAX214

Power up the WAX214 access point by connecting the LAN/PoE port to a PoE switch that supplies 802.3af PoE power and 1 Gbps Ethernet speed.

The following figure shows the access point connected to a NETGEAR GS310TP switch.

## Step 2. Join the default WiFi network

The default WiFi network name (SSID) for the WAX214 is “WAX214XXXXXX-CONFIG-ONLY,” where XXXXXX represents the last 6 characters of the device’s MAC Address, as printed on the access point label. By default, the access point WiFi network provides WPA2 security.

**Note:** The default WiFi turns off if it is idle for 15 minutes.

### Join the WiFi network

- On the WiFi device that you want to connect to the WAX214, open the software utility that manages your WiFi connections. The utility scans for all WiFi networks in your area.
- Find and select the access point’s WiFi network name (SSID) and connect to its WiFi network. The default WiFi network name (SSID) for the WAX214 is “WAX214XXXXXX-CONFIG-ONLY.”
- Enter the unique passphrase printed on the product label.

## Step 3. Log in to the local browser UI

- Launch a web browser and enter **aplogin.net** in the address field. The login screen displays.
- Your browser may display a security warning, which you can dismiss.
- The Day Zero login page displays. Follow the prompts. You must set a new admin password for local login, a new SSID, and a new passphrase. Accept NETGEAR’s terms and conditions.
- Click the **Apply** button. Your settings are saved, and you are disconnected from the WiFi network.
- Reconnect to the WiFi network using the new SSID and new passphrase.
- Log in to the local browser UI using your new admin password. **Note:** If you cannot connect to the Internet, see the user manual for troubleshooting information and instructions on how to log in.

During installation and setup, the access point’s LEDs can light in these colors:

<b>Power</b>		<b>Solid orange.</b> The access point is powered on.
<b>LAN</b>		<b>Solid blue.</b> The LAN port detects a link with a powered-on device.
		<b>Blinking blue.</b> The LAN port is transmitting or receiving data.
<b>2.4 GHz WLAN</b>		<b>Solid blue.</b> The 2.4 GHz radio is operating without clients.
		<b>Blinking blue.</b> The 2.4 GHz radio is transmitting or receiving data.
<b>5 GHz WLAN</b>		<b>Solid blue.</b> The 5 GHz radio is operating without clients.
		<b>Blinking blue.</b> The 5 GHz radio is transmitting or receiving data.

## Other setup methods

For more information on how to configure your device, see the user manual, which you can download by visiting [netgear.com/support/product/WAX214](https://www.netgear.com/support/product/WAX214).
