FEATURES

- 4°-34° linear zoom
- Compact, lightweight, fast
- Two pan/tilt speed modes (normal & turbo)
- Onboard user preset library (save/load)
- Built-in color and strobe macros
- RGB Gamma adjustment
- White color temp presets from 2500~8000K
- Flawless 16-bit 540°/270° motorized pan/tilt movement
- Selectable PWM frequency for flicker-free video with any camera
- DMX, RDM control

SPECIFICATIONS

PHOTOMETRICS

Light Source:	7 x 40W RGBWW LED
Linear zoom:	4° - 34°
Output (lux):	18144lx ~ 439lx (min ~ max beam angle) @ 5 meters

POWER

Mains:	100 - 240 VAC, 50/60 Hz
Consumption:	308W/230V, 311W/120V
Power connections:	PowerCon In/Out

KEY FEATURES

Color mixing:	RGBWW
Macros:	Colors, Strobe
Strobe:	1 ~ 30Hz + strobe effects
Dimming:	0-100% with 4 dimming curve modes
Pan movement:	540°
Tilt movement:	270°
Pan/Tilt modes:	Normal / Turbo

CONTROL

Protocol:	DMX, RDM
DMX channels:	16 / 20
Data connections:	3pin(or 5pin) XLR In/Out for DMX
Onboard menu:	TFT display with 4-button navigation

PHYSICAL

Material:	Plastic and aluminium
Finish:	Matte black
IP rating:	IP20
Cooling:	Active (variable speed fan + silent mode)
Dimensions:	249 x 183 x 345 mm
Weight:	6.6 KG
Mounting:	Omega Bracket (included)

Package contents

- R3
- Power cable
- User manual
- Mounting bracket
- Warranty card

DIMENSIONS

OVERVIEW

FUNCTIONS and OPERATION

POWER ON/OFF

The fixture is powered on by connecting the included power cable to mains power (100 - 240 VAC, 50/60 Hz). Upon receiving power, the fixture will cycle through a motor reset program. To power off, disconnect the power cable or turn off power remotely using a switch.

MENU NAVIGATION

The control panel features five-button navigation of the onboard menu.

If the panel is password-protected, go to the Advanced menu, in the Menu locking submenu, enter the Unlock code using the navigation buttons:

MASTER / SLAVE LINKING

In a connected series of the same fixture, when not using an external controller, a master unit can be assigned to control slave units in the series.

- Set the first fixture in the series to MASTER in the onboard menu
- Set subsequent fixtures to SLAVE
- Connect the DMX OUT of the master unit to the DMX IN of the first slave unit
- Daisy-chain subsequent slave units from DMX OUT to DMX IN

DMX STARTING ADDRESS

To set the starting address of each fixture:

- Press the ENTER button and use the UP/DOWN buttons to scroll the menu
- Select the CONNECT menu and press ENTER
- Use the UP/DOWN buttons to scroll to the ADDRESS menu
- Press ENTER and use the UP/DOWN buttons to select the DMX address
- Press ENTER to confirm the chosen DMX address
- Press the MENU button to save changes and exit

EXAMPLE OF DMX ADDRESSING

The below table shows an example of starting addresses for four fixtures assuming a first fixture with starting address of 001.

The actual starting addresses will be determined by the operator as needed to match external controller settings.

DMX ALLOCATION	1st Fixture	2nd Fixture	3rd Fixture	4th Fixture
20 channels	001	021	041	061

16CH	20CH			
1	1	Red	000-255	
-	2	Red Fine	000-255	
2	3	Green	000-255	
-	4	Green Fine	000-255

SET UP MENU

DMX ADDRESS : Set starting address value

DMX CHANNEL : Select 16- or 20-channel mode

OPTION MENU

PAN / TILT : Set values for:

- Invert Pan
- Invert Tilt
- Swap Pan-Tilt
- Encoder Pan-Tilt
- Pan/Tilt Homing Mode
- Pan Home Default Position
- Tilt Home Default Position
- Pan/Tilt Enable

DISPLAY : Set display behavior (on/off)

FAN MODE : Select Auto or Silent fan mode

SPECIAL FUNCTIONS :

- Pan/Tilt speed: Select Normal or Fast
- Dimmer curve: Select one of four dimmer curves
- RGB Gamma: Select desired gamma setting
- PWM Frequency: Select frequency to avoid camera flicker

SETTING : Load parameter presets for :

- Factory defaults
- User presets 1
- User presets 2
- User presets 3

INFORMATION MENU

Displays stored data and values for:

- System errors
- Fixture operating hours
- LED hours
- System firmware versions
- DMX monitor
- Fans monitor
- Unique RDM identifier

MANUAL CONTROL

RESET : Force fixture to reset

CHANNEL : Set output for each DMX channel

TEST MENU

Run live tests of these functions:

- Pan / Tilt
- Color
- Zoom
- All

ADVANCED MENU

Enter access code (default: 1234) to calibrate physical offsets of the pan, tilt, zoom, and to adjust individual red, green, blue and white LED output to achieve proper white balance.

DMX CABLE PIN-OUTS and TERMINATION

Depending on the length of the DMX cable run, or other factors, it may be advisable to install a terminator at the last fixture in the run.

The illustration below shows the correct placement of a 120Ω 0.25W resistor in a terminator, as well as the standard DMX signal pin-outs.

INSTALLATION

WARNING! Before carrying out any operations with the unit, carefully read this instruction manual and keep it with care for future reference. It contains important information about the installation, usage and maintenance of the unit.

SAFETY

General instruction

- The products referred to in this manual conform to the European Community Directives and are therefore marked with **CE**.
- The unit is supplied with hazardous network voltage (230V~). Leave servicing to skilled personnel only. Never make any modifications on the unit not described in this instruction manual, otherwise you will risk an electric shock.
- Connection must be made to a power supply system fitted with efficient earthing (Class I appliance according to standard EN 60598-1). It is, moreover, recommended to protect the supply lines of the units from indirect contact and/or shorting to earth by using appropriately sized residual current devices.
- The connection to the main network of electric distribution must be carried out by a qualified electrical installer. Check that the main frequency and voltage correspond to those for which the unit is designed as given on the electrical data label.
- This unit is not for home use, only professional applications.
- Never use the fixture under the following conditions:
 - in places subject to vibrations or bumps;
 - in places with a temperature of over 40 °C.
- Make certain that no inflammable liquids, water or metal objects enter the fixture.
- Do not dismantle or modify the fixture.
- All work must always be carried out by qualified technical personnel. Contact the nearest sales point for an inspection or contact the manufacturer directly.
- If the unit is to be put out of operation definitively, take it to a local recycling plant for a disposal which is not harmful to the environment. 

Warnings and installation precautions

- If this device will be operated in any way different to the one described in this manual, it may suffer damage and the guarantee becomes void. Furthermore, any other operation may lead to dangers like short circuit, burns, electric shock, etc.
- Before starting any maintenance work or cleaning the projector, cut off power from the main supply.
- Always additionally secure the projector with the safety rope. When carrying out any work, always comply scrupulously with all the regulations (particularly regarding safety) currently in force in the country in which the fixture's being used.
- Install the fixture in a well ventilated place.
- Keep any inflammable material at a safe distance from the fixture.
- Shields, lenses or ultraviolet screens shall be changed if they have become damaged to such an extent that their effectiveness is impaired.
- The lamp (LED) shall be changed if it has become damaged or thermally deformed.
- Never look directly at the light beam. Please note that fast changes in lighting, e. g. flashing light, may trigger epileptic seizures in photosensitive persons or persons with epilepsy.
- Do not touch the product's housing when operating because it may be very hot.

- 1.2 - MAINTENANCE

MAINTENANCE AND CLEANING THE UNIT

- Make sure the area below the installation place is free from unwanted persons during setup.
- Switch off the unit, unplug the main cable and wait until the unit has cooled down.
- All screws used for installing the device and any of its parts should be tightly fastened and should not be corroded.
- Housings, fixations and installation spots (ceiling, trusses, suspensions) should be totally free from any deformation.
- The main cables must be in impeccable condition and should be replaced immediately even when a small problem is detected.
- It is recommended to clean the front at regular intervals, from impurities caused by dust, smoke, or other particles to ensure that the light is radiated at maximum brightness. For cleaning, disconnect the main plug from the socket. Use a soft, clean cloth moistened with a mild detergent. Then carefully wipe the part dry. For cleaning other housing parts use only a soft, clean cloth. Never use a liquid, it might penetrate the unit and cause damage to it.

TROUBLESHOOTING

Problems	Possible causes	Checks and remedies
Fixture does not light up	• No mains supply • Dimmer fader set to 0 • All color faders set to 0 • Faulty LED • Faulty LED board	• Check the power supply voltage • Increase the value of the dimmer channels • Increase the value of the color channels • Replace the LED board • Replace the LED board
General low light intensity	• Dirty lens assembly • Misaligned lens assembly	• Clean the fixture regularly • Install lens assembly properly
Fixture does not power up	• No power • Loose or damaged power cord • Faulty internal power supply	• Check for power on power outlet • Check power cord • Replace internal power supply
Fixture does not respond to DMX	• Wrong DMX addressing • Damaged DMX cables • Bouncing signals	• Check control panel and unit addressing • Check DMX cables • Install terminator as suggested

Contact an authorized service center in case of technical problems or not reported in the table can not be resolved by the procedure given in the table.
