SUGGESTED TOOLS & MATERIALS:

Safety Glasses

Putty Knife

Wrench

Tape Measure

Level

Flexible Supply Tube

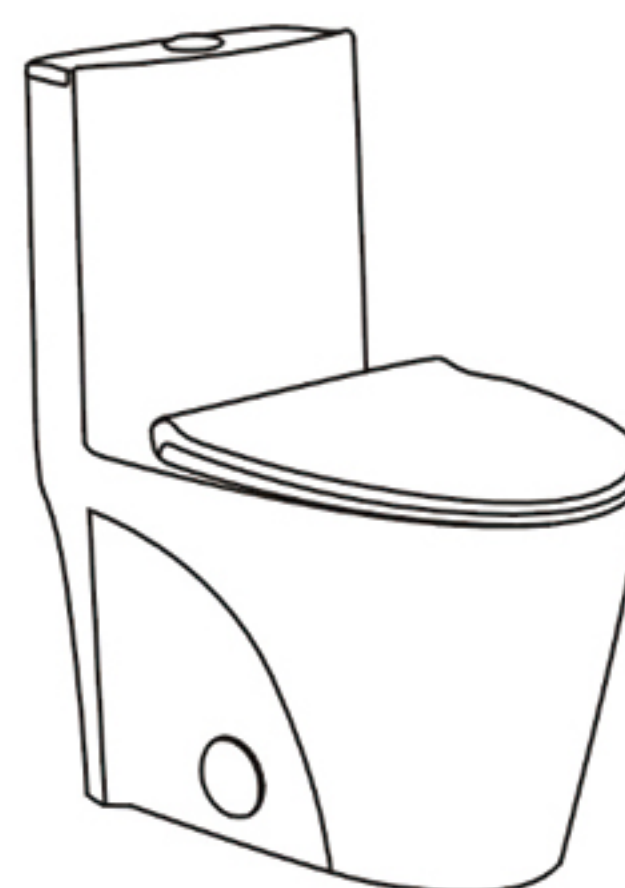

Hacksaw

Screwdriver

INCLUDED PARTS:

One-Piece Toilet

Wax Ring/
Gasket

Bolts

Cover Caps

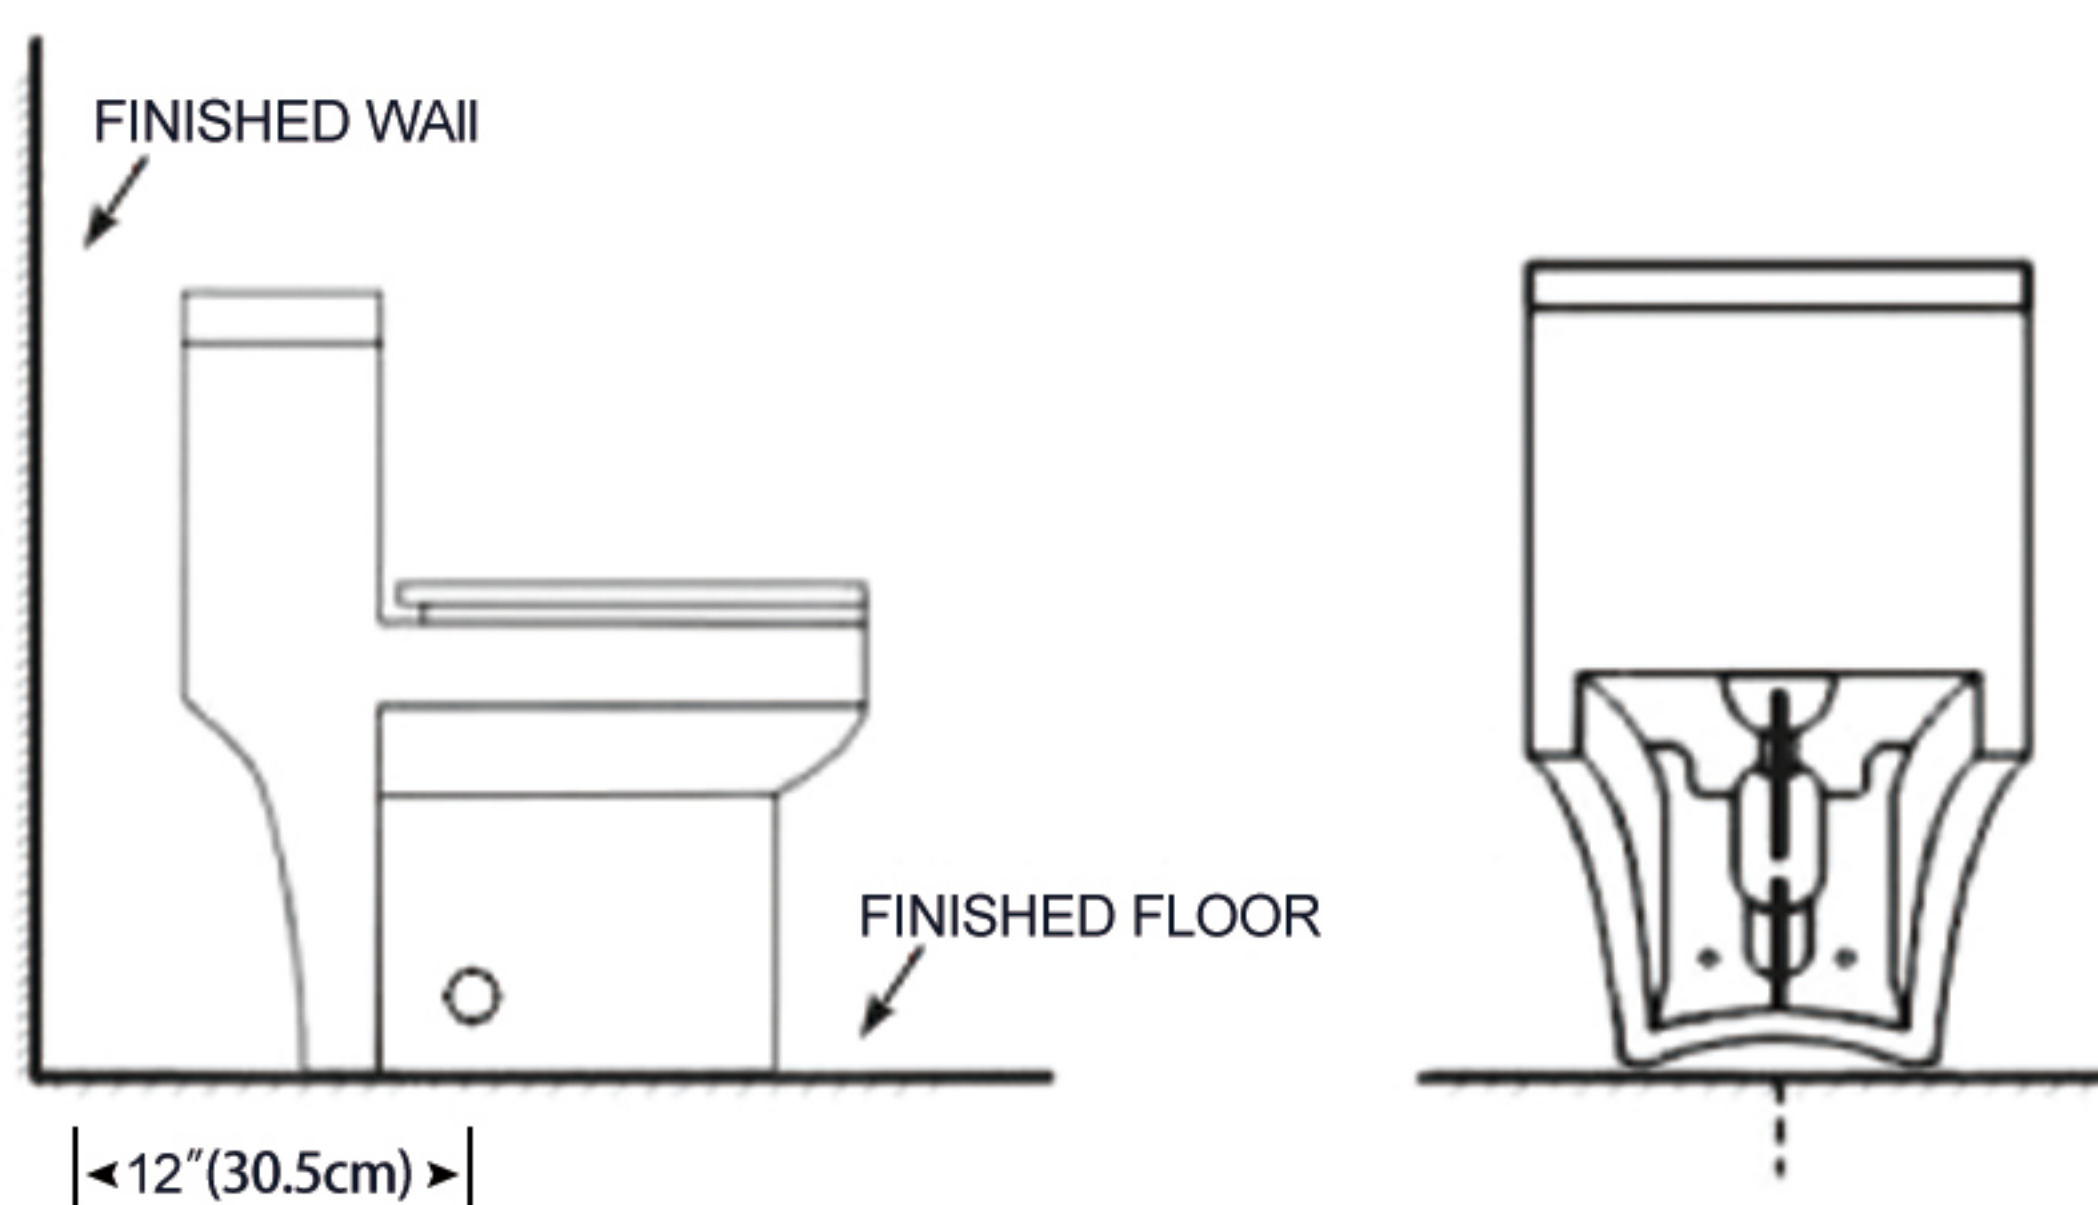

1 REMOVING OLD TOILET

- (a.) Turn off the toilet supply valve and flush toilet completely. Wipe any remaining from the tank and bowl with a towel or sponge.
- (b.) Disconnect and remove the supply tube. NOTE: If replacing the valve, shut off the main water supply first.
- (c.) Remove the old mounting bolts, remove the old toilet, and plug the floor waste opening to prevent sewer odours.
- (d.) Remove the toilet flange bolts and clean the old wax, putty, etc. from the base.

NOTE: The mounting surface must be clean and level before installing the new toilet.

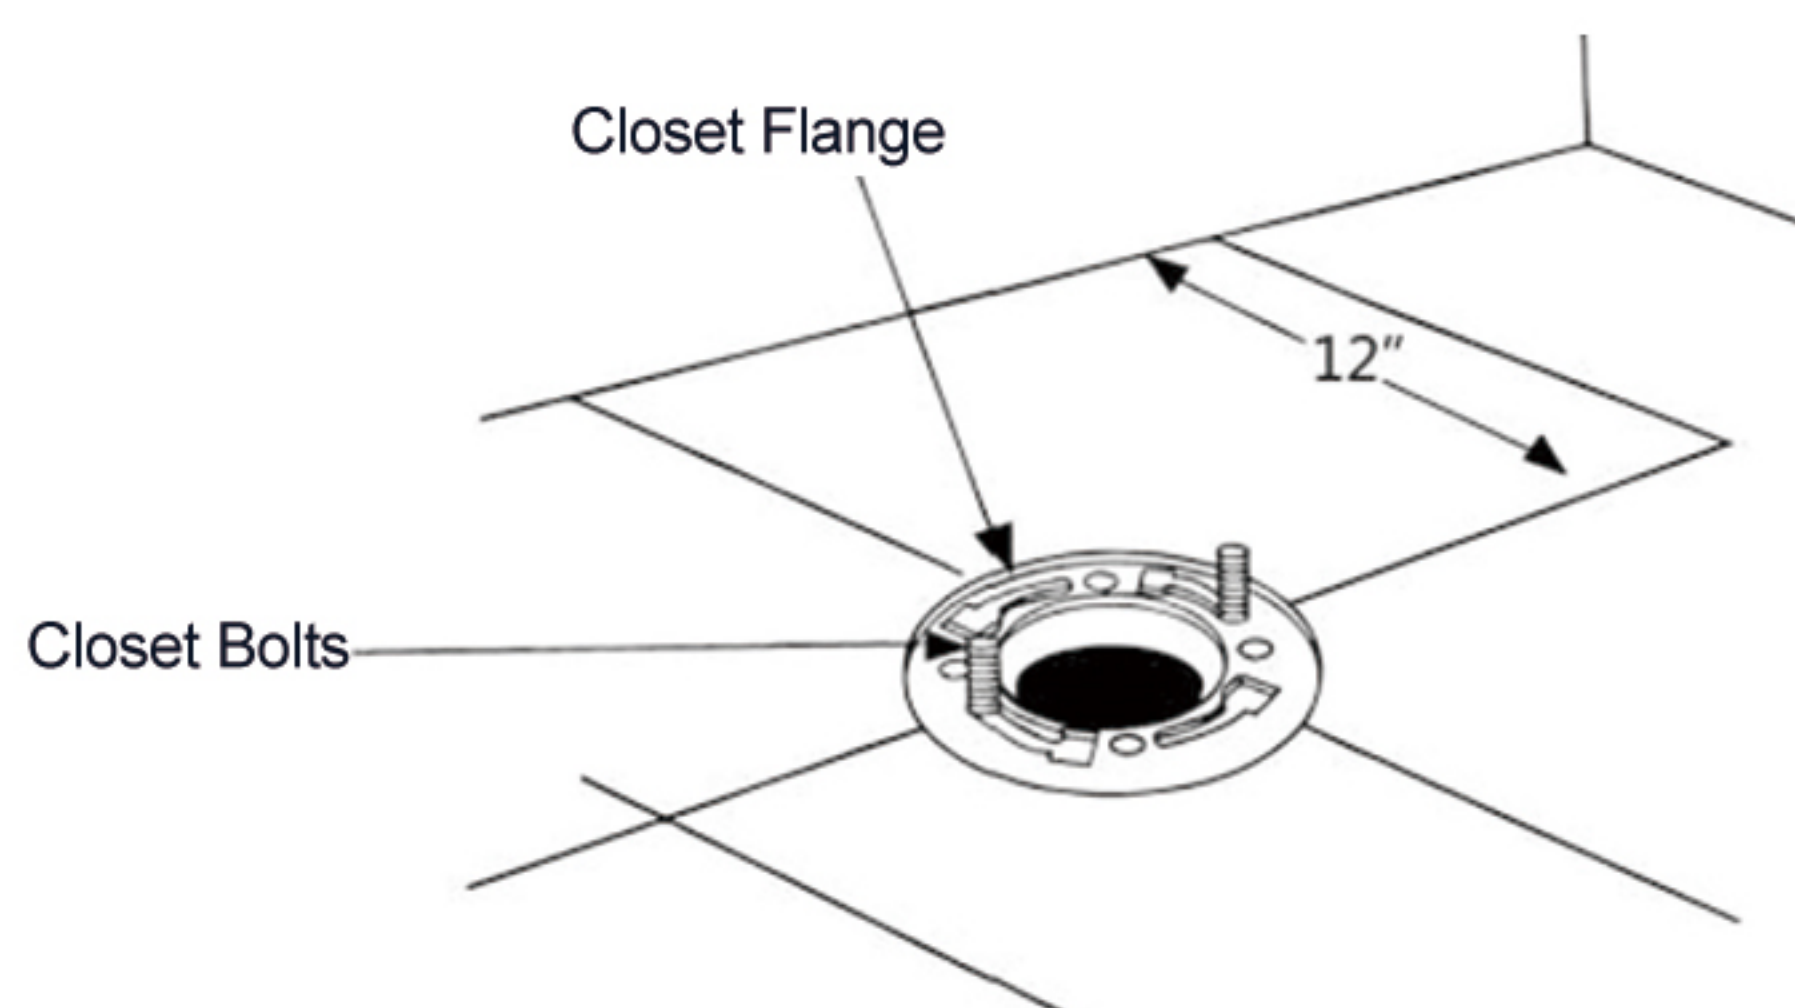

2 ROUGH-IN DIMENSIONS

NOTE: The distance between the wall and the centreline of the toilet flange must be 12 in. (30.5 cm).

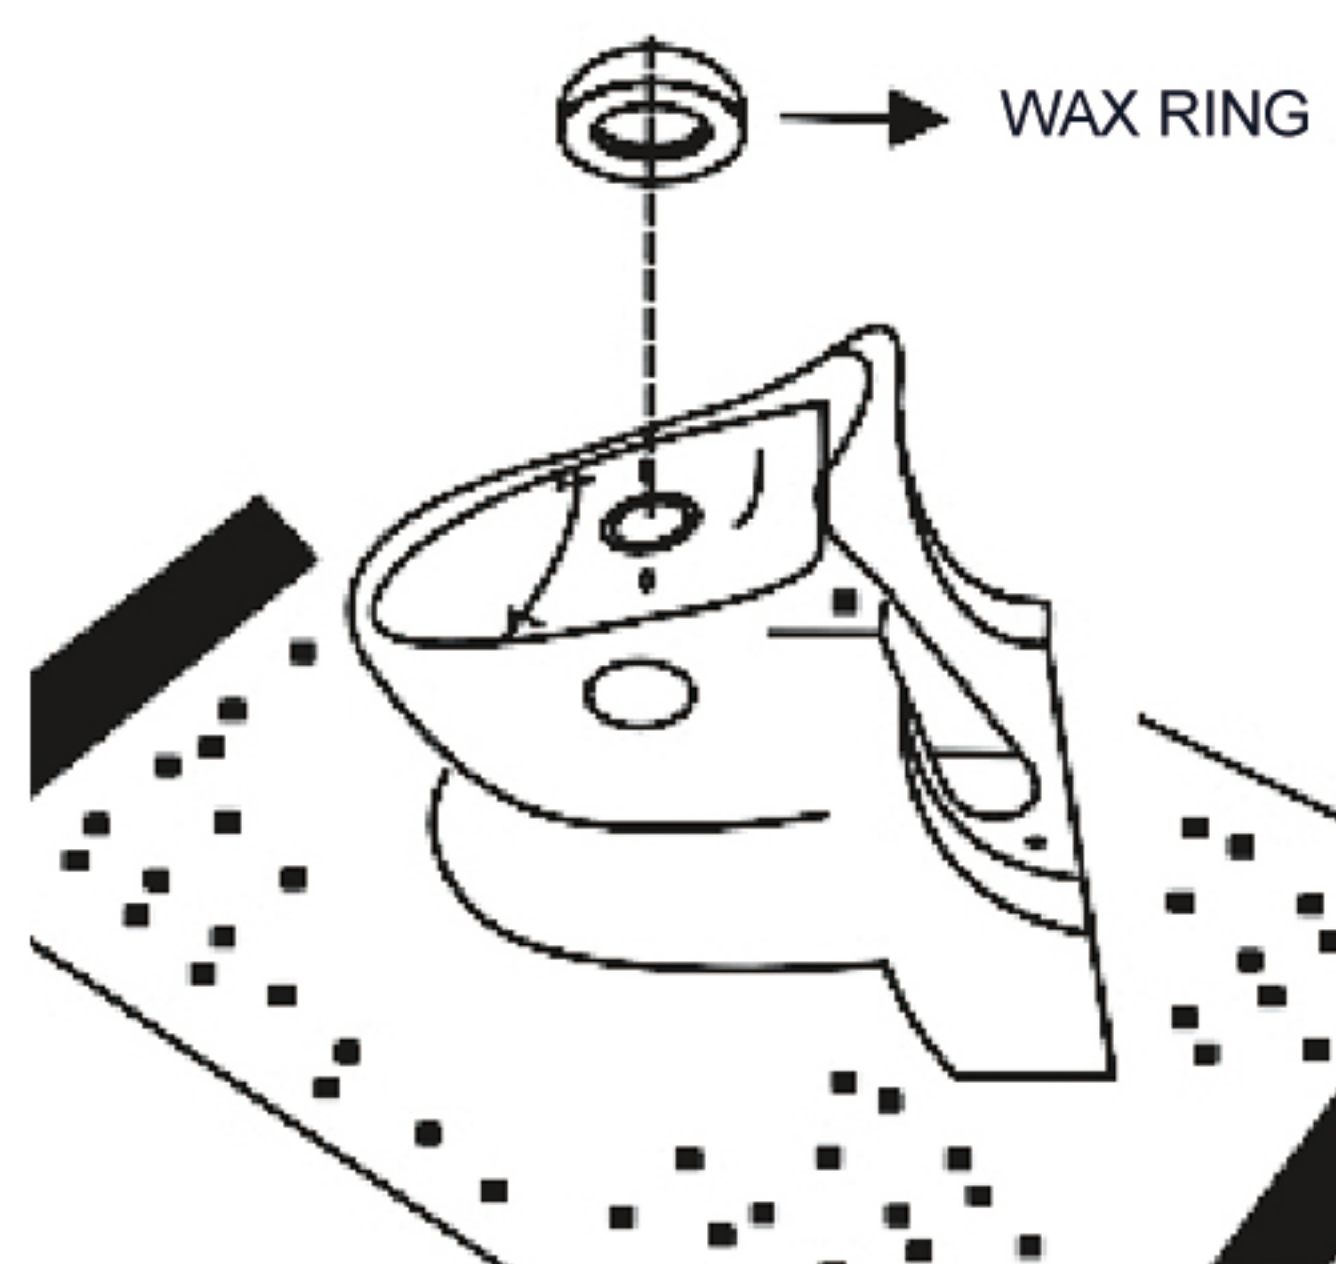

3 INSTALLING MOUNTING BOLTS

Install closet bolts to flange channel, turn 90° and slide into place 6" (152mm) apart and parallel to wall.

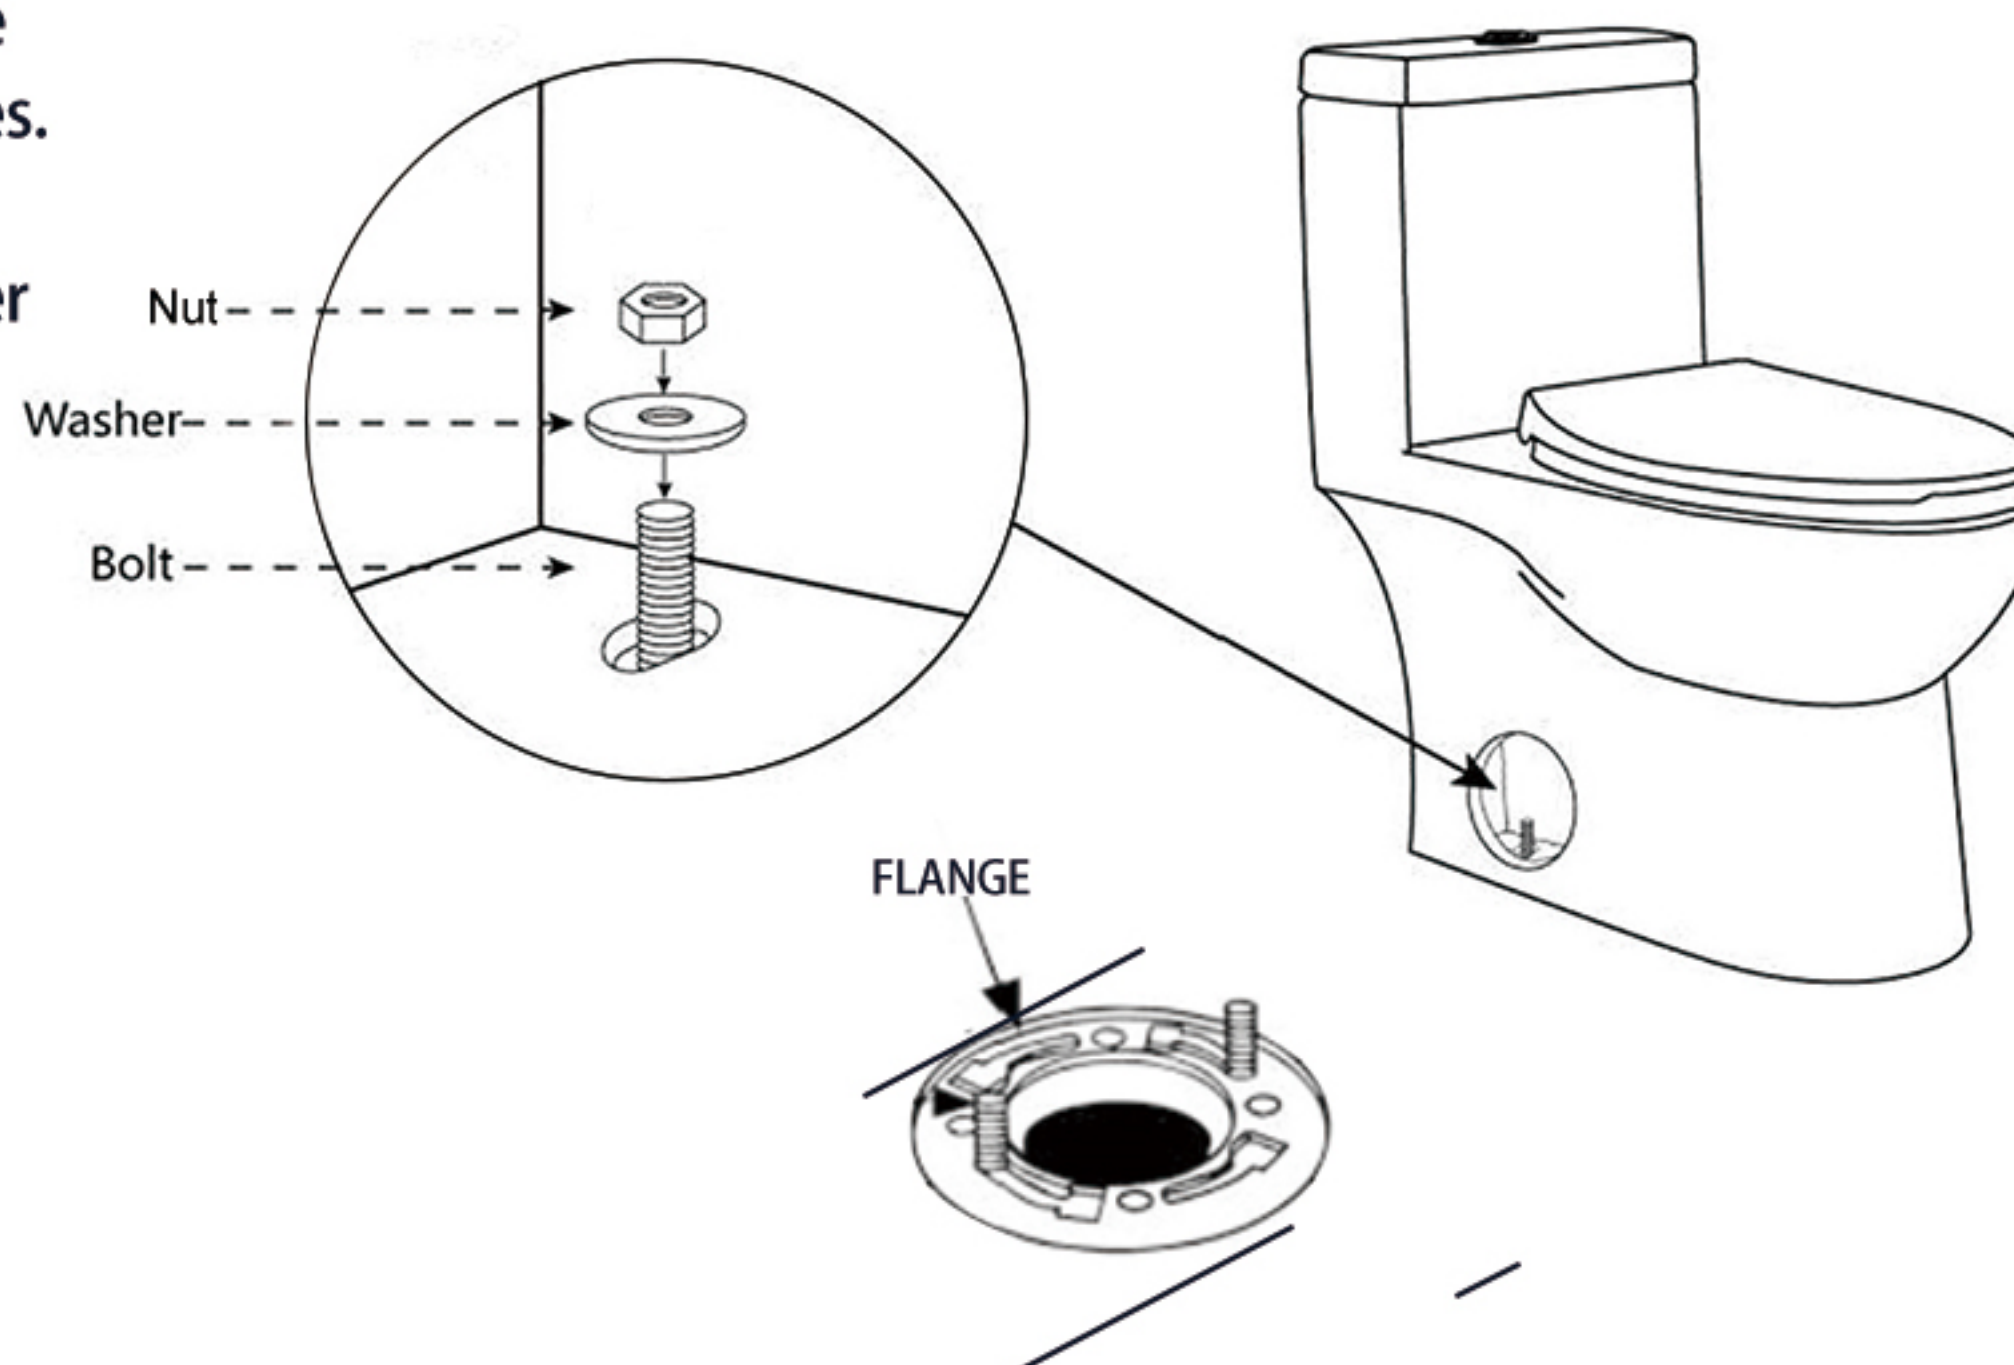

4 INSTALLING WAX RING

Invert the toilet on the floor (cushion to prevent damage) and install the wax ring evenly around the floor drain with the tapered end of the ring facing the toilet.

5 PLACING TOILET ON FLANGE

- Clear the floor waste opening and place the toilet on the flange so that the bolts pass through the mounting holes.
- Loosely install the retainer washers and nuts. The washer sides marked "THIS SIDE UP" must face up.

6 TOILET INSTALLATION

- Position the toilet square to the wall and, with a rocking motion, press the bowl down on the wax ring and flange. Alternately tighten the bolts until toilet is firmly mounted to the ground.

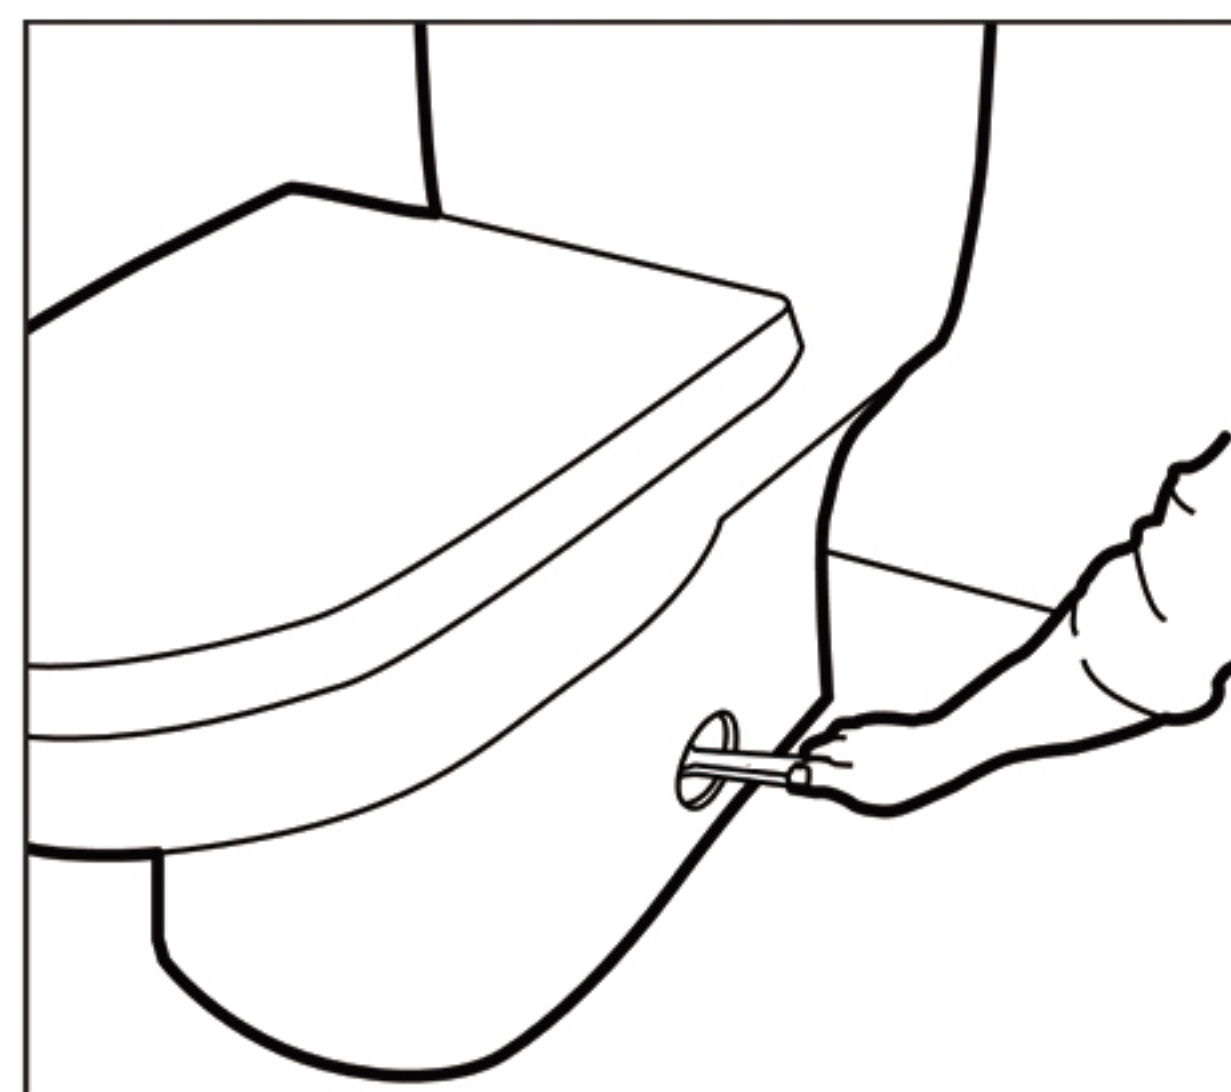

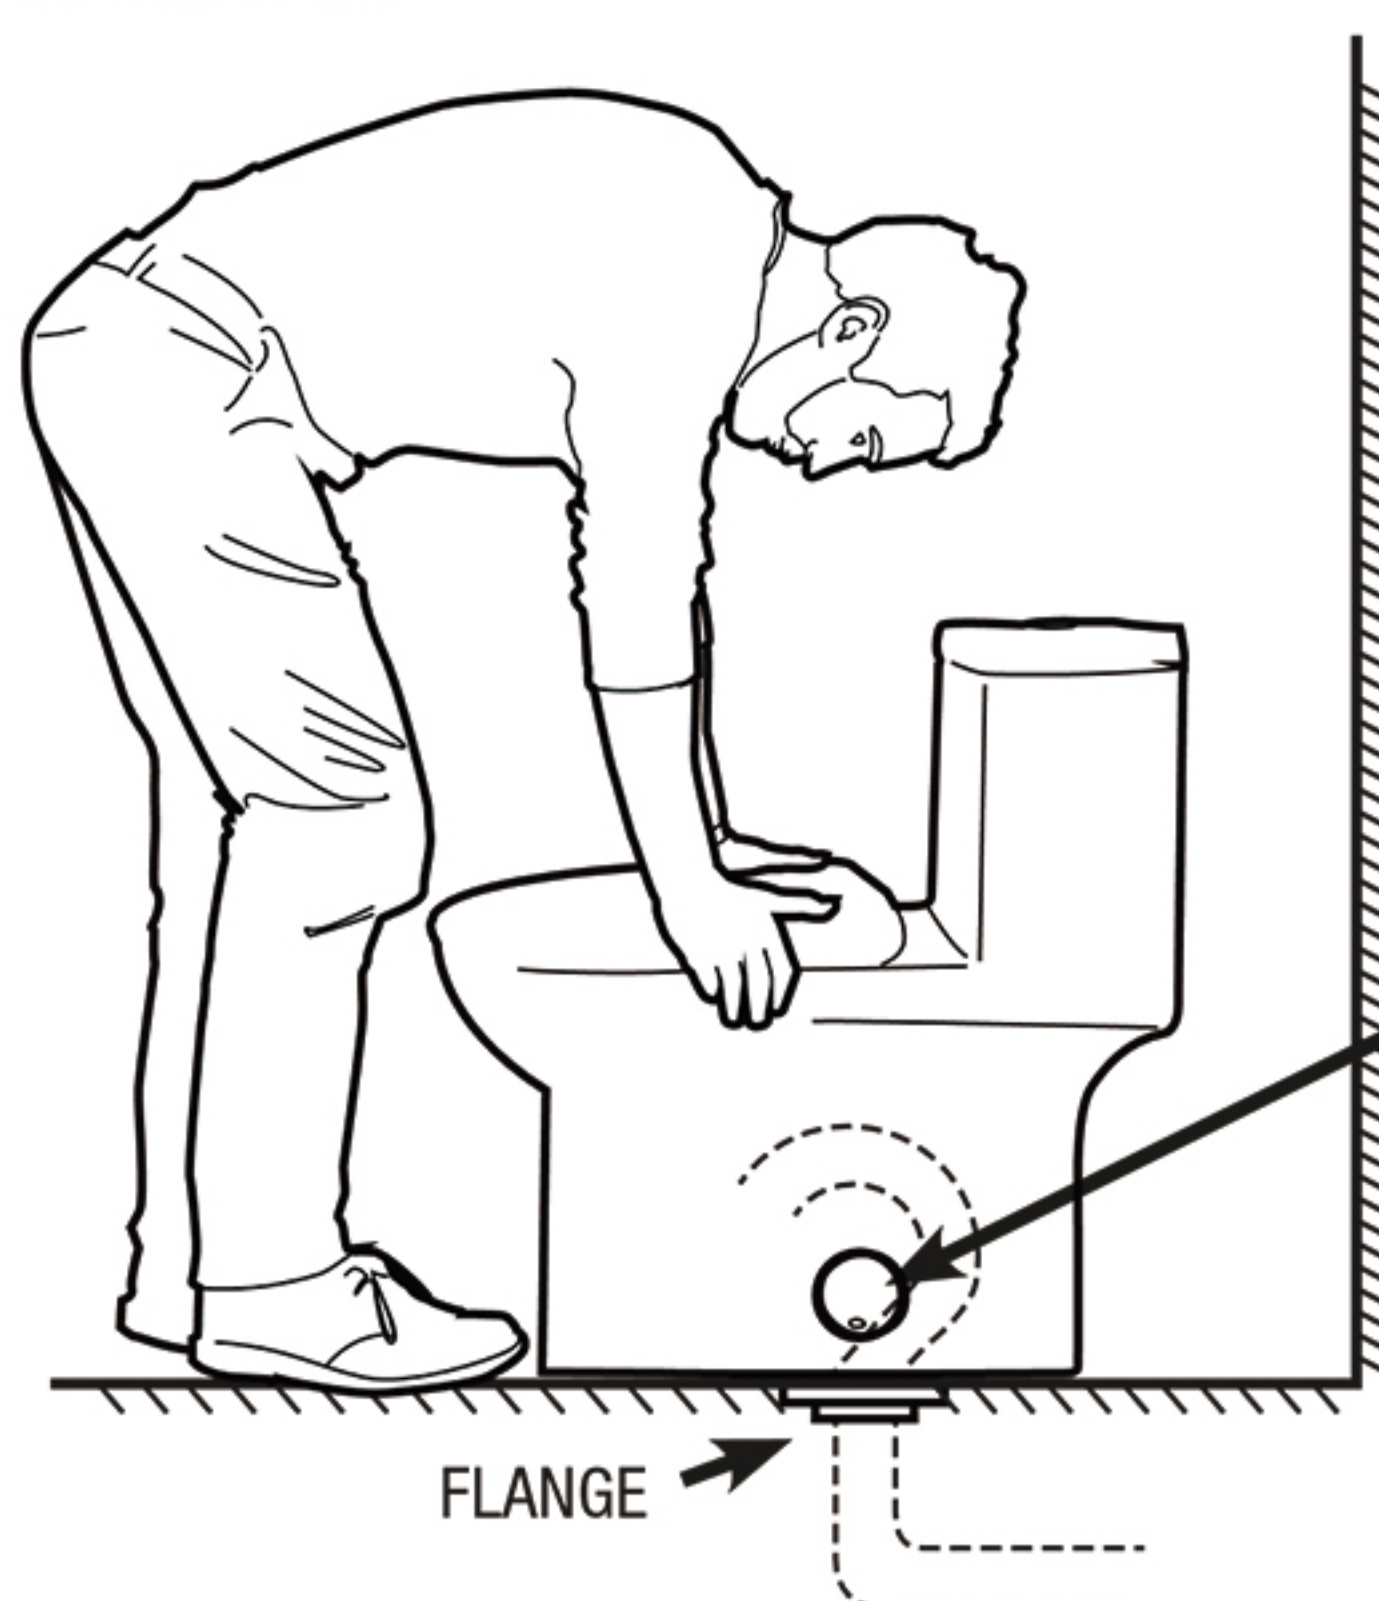

WARNING: DO NOT OVER TIGHTEN NUTS, AS THIS COULD DAMAGE THE BASE.

- Install the bolt caps on the washers. (If necessary, cut the bolt height to the correct length before installing bolt caps).

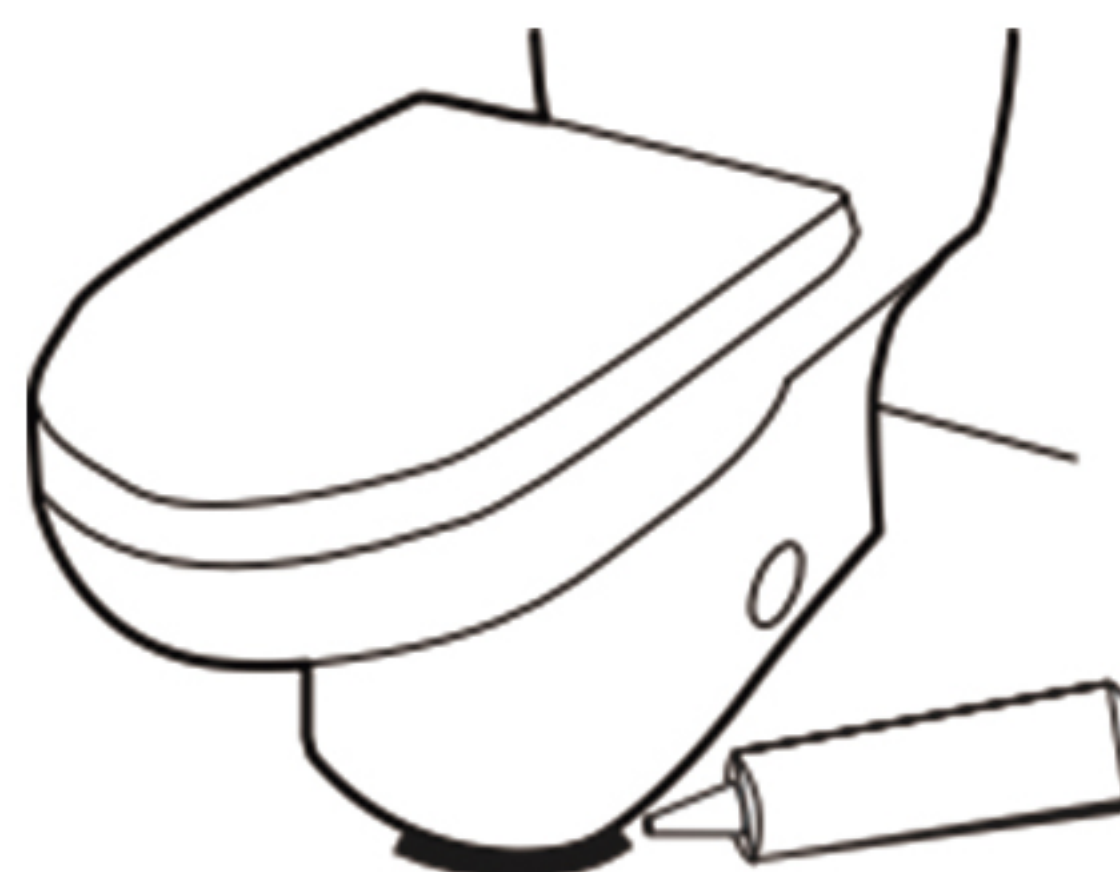

WARNING: DO NOT OVER TIGHTEN THE NUTS, PORCELAIN COULD BREAK.

- Join the water intake valve and the supply valve with the flexible connecting hose (if the part consists of a separate filter, connect the filter first). Turn on the water supply and make sure that all of the connections have been properly joined and that there are no leaks. **NOTE:** Tightening the nuts further can prevent leakage.

- Apply a bead of sealant around the base. Remove any excess sealant.

CLEANING & MAINTENANCE

To clean the toilet, use warm, soapy water; rinse thoroughly with fresh water and dry with a soft cloth. Avoid detergents, disinfectants, or cleaning products in aerosol cans. NEVER use abrasive powders scouring powders or pads on the toilet seat. Some bathroom chemicals and cosmetics may damage the seat's finish.

WARNING: Do not use in-tank cleaners. Products containing chlorine (calcium hypochlorite) can seriously damage fittings in the tank. This can cause leakage and property damage.

NOTES

1. Make sure all the parts are included in the package, should one be missing, please contact the retailer where you have purchased this product.
2. When you take the parts from the carton, keep them together in a container to avoid losing them.
3. When the installation is completed, make sure the seat and cover is firmly installed.
4. For maintenance, do not use corrosive products or solvents (such as gasoline, thinner or turpentine), or sharp objects. Clean the surface with a mild soap and water and dry with a clean and soft cloth.
5. Do not remove the plastic protector before using the seat and cover.
6. Some bathroom chemicals and cosmetics may damage the finish.
7. The closing speed of seat with slow closure mechanism may vary according to room temperature and frequency of use.
8. Do not place heavy objects on the seat and do not stand as the weight could damage the seat or you could fall.
9. Do not expose the product to direct sunlight to avoid fading it.
10. Do not let children handle the seat to avoid pinching their fingers.

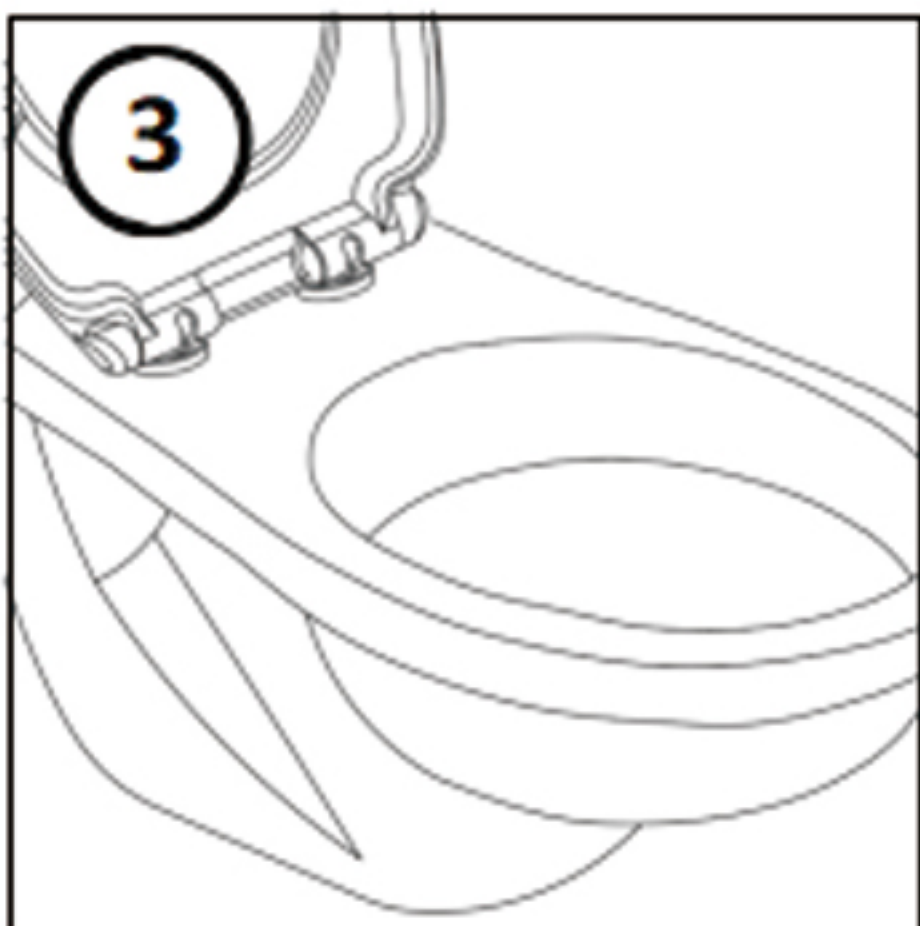

Insert the fittings into the bowl openings.

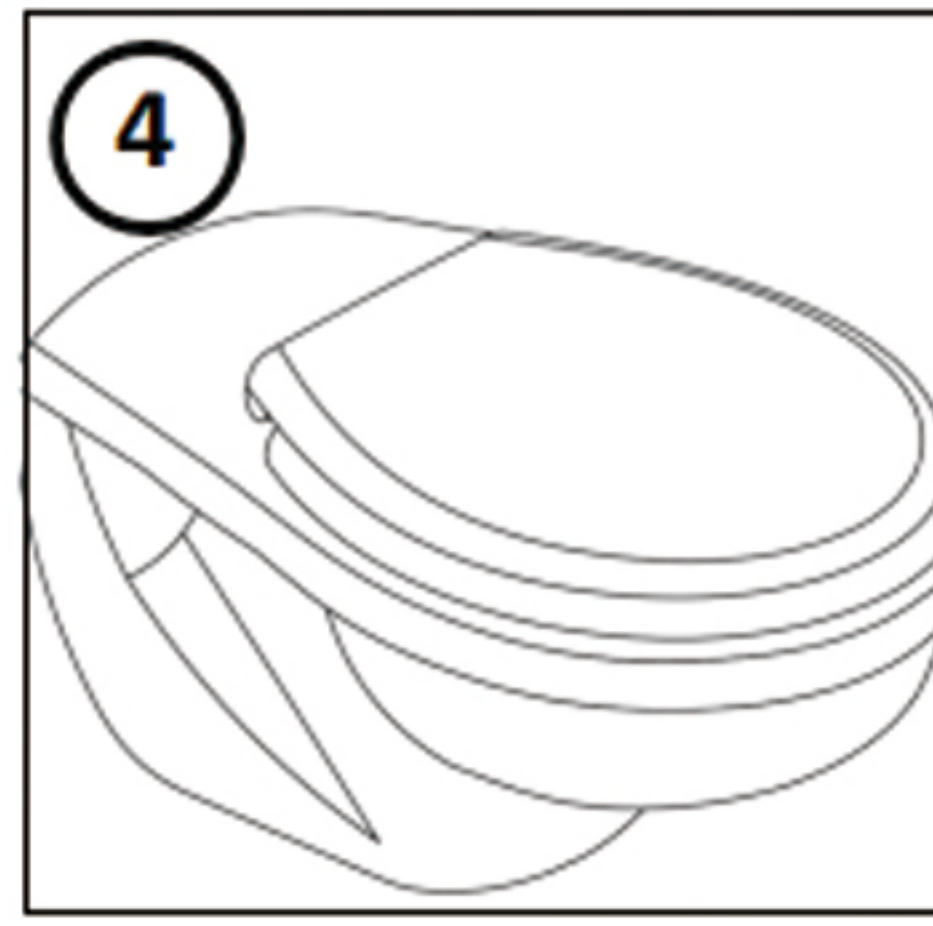

NOTE: Do not fully tighten screws.

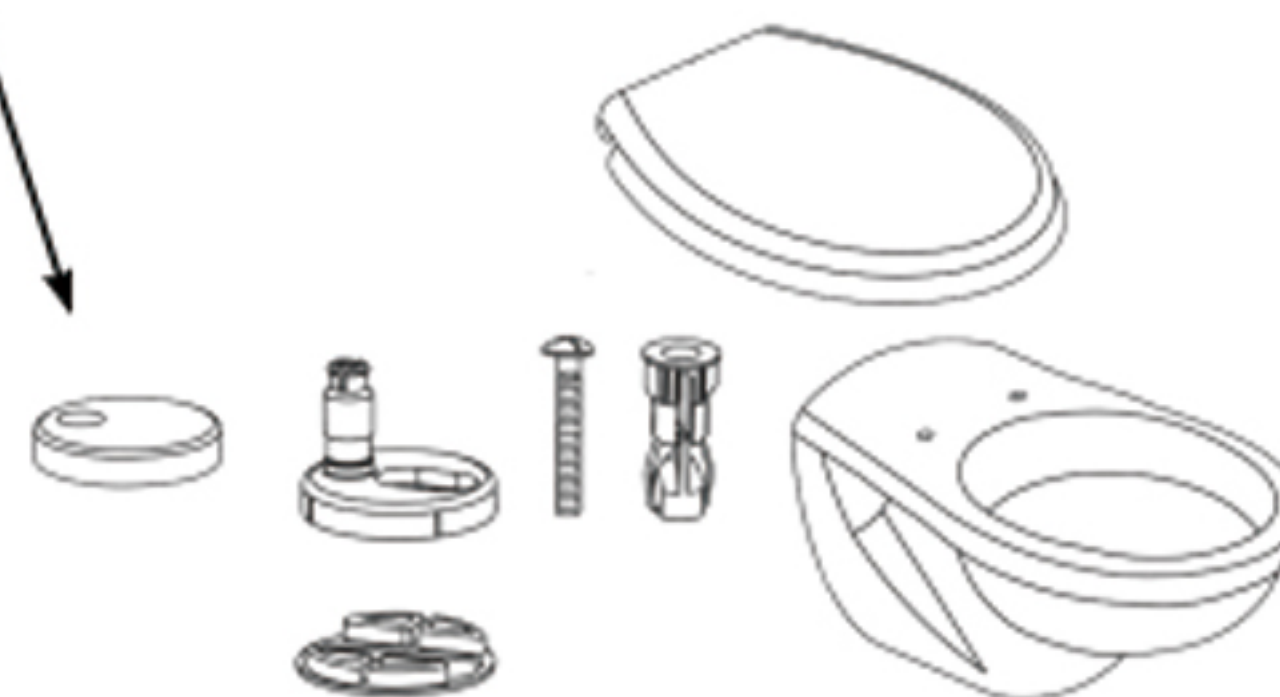

With the toilet seat in vertical position, push it onto the fittings and adjust the seat position to the toilet bowl.

Remove the seat by lifting it vertically, tighten fittings, and cover them with caps.

Reattach the seat: place it in a vertical position push it onto the fittings until you hear a click.
