Multi-Function Knob **A**

The multi-function knob can scroll (clockwise or counterclockwise) and select or de-select (press in). The open arrow > symbol is displayed when scrolling through menu items. Once an item has been selected (press the knob), the arrow fills in ►. Turn the knob to adjust the value. Press the knob again to de-select the menu item and scroll to the next item.

Menu Key **B**

Press the menu key for access to the main menu (*Figure 20*). Zone Control, System Control, Source Setup, Zone Setup, System Setup.

Back Key **C**

Press Back to return to a previous screen. Pressing the back button repeatedly eventually returns to the top of the main menu.

Dim Key **D**

Toggles through four brightness levels for the display and key lights. After a set period of time (adjustable using the front panel or the SF-16M PC Setup Utility), the display enters a screen saver mode (dark.)

Front Panel Control

The first two items in the main menu (*Figure 5*) allow control of the SF-16M.

Zone Control - Choose a source, adjust volume, bass, treble, and loudness.

System Control - Use Group commands, activate Overrides and Sound Scenes.

Third Party Control

If you are using a third party controller, you may use the worksheet on page 11, but you do not need to set up the Zones (see page 10). Connect sources and speakers (see page 4) and set up advanced features as needed (see page 8). Three methods of system control are possible, listed here in recommended order:

SONAFLEX

CONTROL
SYSTEMS

audioauthority.com/sonaflex_tip2

1	Third party serial controller	DB-9 RS-232 port	Most reliable, all functions available, customized
2	Third party IP controller	RJ-45 Ethernet port	Very reliable, all functions available, customized
3	Third party IR controller	3.5mm IR port	Most functions available, customized

RS-232 Port

The DB-9 RS-232 port of the SF-16M can be connected to virtually any third party RS-232 controller (Figure 10). Allows 2-way communications for control and feedback. Download the serial command set from our website.

Ethernet Port

The SF-16M Ethernet port connects to any standard Ethernet router/switch (Figure 11). By default DHCP is enabled on the SF-16M. SDDP is enabled for seamless integration with Control4 systems. It is often convenient to turn DHCP on to connect automatically to a DHCP network for initial setup. Once the SF-16M is installed, use a static IP address and turn DHCP off. Download the Ethernet command set from the SF-16M product page on our website.

IR Port

The 3.5mm "Main IR In" connects to any third party IR controller using a mono 3.5mm cable (Figure 12). A comprehensive list of available IR commands for the SF-16M is available in spreadsheet format. Download the hexcode IR command set from the SF-16M product page on our website.

Advanced Features

Many of the advanced features are used only with third party controllers. The PC Setup Utility is the most efficient way to set up SF-16M advanced features, and provides an easy way to save an archive of each configuration to work on off-site, or for backup. *For more detail, see video tutorials at www.audioauthority.com/sonaflex_tip4.* The following settings can only be configured using Ethernet/serial commands or the PC Setup Utility (*not front panel controls*):

Set Up Zones and Groups

Zones and Groups are useful for front panel control of SonaFlex speaker outputs – they are not compatible with third party controllers, which have their own methods of controlling multiple outputs at once. Each Zone may contain one or many speaker outputs, which can be mono and/or stereo. Zones may not overlap. Groups can contain one or many Zones, and their members can overlap, as shown in *Figure 14*.

How to Create and Use Zones

Each SF-16M can have up to eight zones if all outputs are stereo, or 16 zones if all outputs are mono. Using the front panel, assign each speaker output to a Zone as shown in *Figure 15*. You can also use the PC Setup Utility V2.0 to create zones.

How to Create and Use Groups

Use the PC Setup Utility to create Groups and add Zones as members of each Group. Group volume and source selection controls are found in the System Control menu.
