Data center switch

Description

The **MES7048** switch provide full Layer 2 and Layer 3 functionality allowing them to be used as aggregation switches as well as in data centers. Switch software is optimized to scale and improve data center performance.

The **MES7048** switch is high performance devices with 10GBASE-R and 40GBASE-SR4/LR4 / 100GBASE-SR4/LR4 interfaces that can be used as aggregation or transport switches in carrier networks and as Top-of-Rack or End-of-Row switches for data centers.

MES7048 overall view

- Bandwidth – 2.15 Tbps*
- Non-blocking architecture*
- L3 switch*
- Stacking up to 8 devices*
- 48 ports of 10G + 6 ports of 40G/100G*
- MAC-table capacity – 288K*
- Hot-swappable redundant power supplies*
- Front-to-Back cooling*
- Hot-swappable fans*

The device's ports support operation at rates of 1 Gbps (SFP), 10 Gbps (SFP+), 40 Gbps (QSFP+) and 100 Gbps (QSFP28).

The non-blocking architecture guarantees lossless packet forwarding at wire speed with minimum and predictable delays for all types of traffic. The front-to-back cooling provides effective cooldown in modern data centers.

The redundant and hot-swappable fans and AC/DC power supplies along with advanced hardware monitoring functions provide high reliability and uninterrupted services.
