

Voltage monitoring relay CM-EFS.2 for single-phase AC/DC voltages

For the monitoring of voltages in single-phase AC/DC systems, ABB's CM range comprises a wide selection of powerful and compact devices, all featuring only 22.5 mm (0.89 in) width.

This range includes voltage monitoring relays for over- and undervoltage protection from 3 V to 600 V.

Incorporating ABB's long-term experience, the CM range provides your electric installation with the highest safety and reliability.

Characteristics

- Monitoring of DC and AC voltages from 3-600 V
- TRMS measuring principle
- One device includes 4 measuring ranges
- Over- and undervoltage monitoring configurable
- ON- or OFF-delay configurable
- Open- or closed-circuit principle configurable
- Latching function configurable
- Threshold values for >U and <U adjustable
- Fixed hysteresis of 5 %
- Tripping delay T_V adjustable 0; 0.1-30 s
- 1x2 c/o contacts (common signal) or 2x1 c/o contact (separate signals for >U and <U) configurable
- 22.5 mm (0.89 in) width
- 3 LEDs for indication of operational states

Order data

Voltage monitoring relay

Type	Rated control supply voltage	Measuring ranges	Order code
CM-EFS.2	24-240 V AC/DC	3-30 V, 6-60 V, 30-300 V, 60-600 V	1SVR 430 750 R0400

Accessories

Type	Description	Order code
ADP.01	Adapter for screw mounting	1SVR 430 029 R0100
MAR.02	Marker label for devices with DIP switches	1SVR 430 043 R0000
COV.01	Sealable transparent cover	1SVR 430 005 R0100

Functions

Operating controls

1 Adjustment of the hysteresis >U for overvoltage

2 Adjustment of the threshold value <U for undervoltage

3 Indication of operational states

U/T: green LED – control supply voltage, timing

R: yellow LED – relay status

U: red LED – over- / undervoltage

4 Adjustment of the tripping delay T_v

5 Adjustment of the measuring range

6 DIP switches (see DIP switch functions)

Application

The window voltage monitoring relay CM-EFS.2 can be used for the simultaneous monitoring of over- (>U) and undervoltages (<U) in single-phase AC and/or DC systems. Depending on the configuration, one c/o contact each  or both c/o contacts in parallel  can be used for the over- and undervoltage monitoring. Open-  or closed-circuit principle  as well as an adjustable ON  or OFF tripping  delay are configurable.

Operating mode

The CM-EFS.2 has 2 c/o contacts and includes 4 measuring ranges: 3-30 V, 6-60 V, 30-300 V, and 60-600 V.

The unit is adjusted with potentiometers and switches on the top of the unit. The selection of: ON-delay  or OFF-delay , open-  or closed-circuit principle , latching function ON  or OFF  and 2x1 c/o  or 1x2 c/o contacts  is made with DIP switches. A potentiometer, with direct reading scale, allows the adjustment of the threshold value_{max} (>U) for overvoltage and the threshold value_{min} (<U) for undervoltage. There is also adjustment for the tripping delay T_v. The tripping delay T_v is adjustable over a range of instantaneous to a 30 s delay. The hysteresis is fixed at 5 %.

Function diagram: voltage window monitoring 1x2 c/o contacts  ON-delayed  without latching 

Open-circuit principle 

The voltage to be monitored (measured value) is applied to terminals B-C. The supply voltage applied to terminals A1-A2 is displayed by the glowing green LED.

If the measured value exceeds the threshold value_{max} (>U) or drops below the threshold value_{min} (<U), the tripping delay T_V starts and the red LED glows (overvoltage), or flashes  (undervoltage) respectively.

Timing of T_V is displayed by the flashing  green LED.

When T_V is complete and the measured value still exceeds the threshold value_{max} minus the fixed hysteresis (5 %) or is still below the threshold value_{min} plus the fixed hysteresis (5 %), the output relays energize and the yellow LED (relay energized) glows.

If the measured value decreases below the threshold value_{max} minus the fixed hysteresis (5 %) or exceeds the threshold value_{min} plus the fixed hysteresis (5 %), the output relays de-energize and the red and yellow LEDs turn off.

If supply voltage is interrupted, the green LED turns off.

Closed-circuit principle 

The voltage to be monitored (measured value) is applied to terminals B-C. When supply voltage is applied to terminals A1-A2, the output relays energize and the green and yellow LED (relays energized) glow.

If the measured value exceeds the threshold value_{max} (>U) or drops below the threshold value_{min} (<U), the tripping delay T_V starts and the red LED glows (overvoltage), or flashes  (undervoltage) respectively.

Timing of T_V is displayed by the flashing  green LED.

When T_V is complete and the measured value still exceeds the threshold value_{max} minus the fixed hysteresis (5 %) or is still below the threshold value_{min} plus the fixed hysteresis (5 %), the output relays de-energize and the yellow LED (relays energized) turns off.

If the measured value decreases below the threshold value_{max} minus the fixed hysteresis (5 %) or exceeds the threshold value_{min} plus the fixed hysteresis (5 %), the output relays re-energize, the yellow LED glows and the red LED turns off.

If supply voltage is interrupted, the output relays de-energize and the yellow and green LEDs turn off.

Function diagram: voltage window monitoring 1x2 c/o contacts 1x2 c/o OFF-delayed without latching X

Open-circuit principle open

The voltage to be monitored (measured value) is applied to terminals B-C. The supply voltage applied to terminals A1-A2 is displayed by the glowing green LED.

If the measured value exceeds the threshold value_{max} (>U) or drops below the threshold value_{min} (<U), the output relays energize, the yellow LED (relays energized) glows and the red LED glows (overvoltage), or flashes (undervoltage) respectively.

If the measured value decreases below the threshold value_{max} minus the fixed hysteresis (5 %) or exceeds the threshold value_{min} plus the fixed hysteresis (5 %), the tripping delay T_V starts and the red LED turns off.

Timing of T_V is displayed by the flashing green LED. When T_V is complete, the output relays de-energize and the yellow LED (relay energized) turns off.

If supply voltage is interrupted, the green LED turns off.

Closed-circuit principle closed

The voltage to be monitored (measured value) is applied to terminals B-C. When supply voltage is applied to terminals A1-A2, the output relays energize and the green and yellow LED (relays energized) glow.

If the measured value exceeds the threshold value_{max} (>U) or drops below the threshold value_{min} (<U), the output relays de-energize, the yellow LED turns off and the red LED glows (overvoltage), or flashes (undervoltage) respectively.

If the measured value decreases below the threshold value_{max} minus the fixed hysteresis (5 %) or exceeds the threshold value_{min} plus the fixed hysteresis (5 %), the tripping delay T_V starts and the red LED turns off.

Timing of T_V is displayed by the flashing green LED. When T_V is complete, the output relays energize and the yellow LED (relay energized) glows.

If supply voltage is interrupted, the output relays de-energize and the yellow and green LEDs turn off.

Input circuit

Supply circuit		A1-A2
Rated control supply voltage U_s		24-240 V AC
Rated control supply voltage tolerance		-15...+10 %
Rated frequency		50/60 Hz
Current / power consumption	24 V DC	30 mA / 0.75 W
	115 V AC	17 mA / 1.9 VA
	230 V AC	11 mA / 2.6 VA
On-period		100 %
Power failure buffering time		20 ms
Transient overvoltage protection		varistors
Measuring circuit		B-C
Monitoring function		over- and undervoltage monitoring configurable
Measuring method		TRMS measuring principle
Measuring inputs	terminal connection	B-C
	measuring range	3-30 V, 6-60 V, 30-300 V, 60-600 V
	input resistance	600 k Ω
	pulse overload capacity $t < 1\text{ s}$	800 V
	continuous capacity	660 V
Threshold value		>U and <U adjustable within the indicated measuring range
Tolerance of the adjusted threshold value		10 % of the range end value
Hysteresis related to the threshold value		5 % fixed
Measuring signal frequency range		DC / 15 Hz - 2 kHz
Rated measuring signal frequency range		DC / 50-60 Hz
Maximum response time	AC	80 ms
	DC	120 ms
Accuracy within the control supply voltage tolerance		$\Delta U \leq 0.5\text{ %}$
Accuracy within the temperature range		$\Delta U \leq 0.06\text{ % / °C}$
Transient overvoltage protection		varistors
Timing circuit		
Delay time T_V		0 or 0.1-30 s adjustable
Repeat accuracy (constant parameters)		$\pm 0.07\text{ %}$ of full scale
Tolerance of the adjusted delay time		-
Accuracy within control supply voltage tolerance		$\Delta t \leq 0.5\text{ %}$
Accuracy within temperature range		$\Delta t \leq 0.06\text{ % / °C}$

Indication of operational states
