---

Android User

Scan the above qr code on your android phone or search "ATranslator" in the Google store.
Download the Android application and use it with the translator

Apple iOS User

An apple phone can scan the qr code or download the app "ATranslator" from the apple store and use it with a translator

Be careful:

1.Translator must be connected to Bluetooth of smartphone.

2.The ATranslator application needs to be installed on the mobile phone

3.Ensure that the mobile network is in a normal state (recommend mobile 4G network)

4.long press the power button of the translator for 2 seconds, and the volume can be adjusted by the buttons of the mobile phone and the translator.

1. Open the ATranslator APP and click on the "Dialogue Translation" option in the middle of the interface to enter the Bluetooth connection page.

Search for the Bluetooth name (AI Translator), click to connect, and press the back key to return to the main interface after successful connection

(only when the indicator light is green, can it be used normally; If the indicator light shows white, restart and reconnect the translator and APP to ensure the normal connection of the phone)

How to set the language:

1. Click on the language logo at the top of the screen in the main translation interface.
2. Select the language you want to translate in the pop-up language list.

Voice translation:

1. In the translation interface of APP, the left language corresponds to the "A" key of the translator and the right language corresponds to the "B" key of the translator.
2. In order to accurately translate, press the A or B button of the translator and wait for 1 second to start talking (Apple mobile phone needs to press and hold the button for 2 seconds before speaking)
3. Release the button after speaking (don't speak too fast, try to speak clearly and within 60 seconds)
4. The translator will translate the speech recognition into text and translate it into the required language for sound playback (if the network is not good, the playback time will be prolonged).

When using the translator, please make sure that the translation interface on the APP is always open on the IOS phone, otherwise the translation cannot be performed normally.
ANDROID mobile phone can open or not open the translation interface, can translate (APP process needs to run in the background, can not close).

Text translation:

At the top of the text translation interface, select the language to be translated, click the blank space in the upper part to directly enter the content to be translated, click the "translation" button on the right, and the translation result will be displayed in the lower part.

Photo translation.

Set the language to be translated in the APP interface and click to take a photo.
