CARE & MAINTENANCE INFORMATION**

TOMMY HILFIGER

« It gives me great pleasure to present the TOMMY HILFIGER Jewelry collection. Modern designs crafted with care and finished with the distinctive, unexpected signature details that brand them as Tommy Hilfiger. Designs that are cool and classic, spirited fresh and fun ». *Tommy Hilfiger.*

Congratulations on your purchase.

Special care has been taken in designing and creating your TOMMY HILFIGER Jewelry item; to maintain its radiance and shine, please read the following instructions to properly care for your new jewelry.

GENERAL COMMENTS

It's best to keep your jewelry separately in its original packaging to protect the surface of the metals and the brilliance of the stones. We recommend avoiding direct contact between your jewelry and fragrance, household chemicals or similar products.

Direct contact with water (showering, bathing, swimming in fresh, salt, or chlorinated water) should also be avoided.

LEATHER

Leather should be kept dry. Exposure to water may cause the leather to become brittle and eventually break. To preserve the finish of the leather, avoid contact with fragrances, chlorinated or salt water. Gently wipe your leather jewelry with a damp cloth (no cleaning products containing alcohol or solvents), and air dry.

SILICONE

To help preserve the natural elasticity and quality of your silicone or rubber jewelry, rinse it using a soft cloth soaked in fresh water following exposure to salt water, chemicals, or abrasive substances.

Use warm water and a neutral pH soap applied to a soft cloth to gently clean white silicone or rubber pieces; then wipe with a second clean cloth dipped in warm water, and air dry. Contact with acetone and ethyl alcohol should be avoided.

STAINLESS STEEL

Stainless steel is naturally highly resistant to corrosion caused by water and humidity. Maintain its finish by gently cleaning it regularly with a soft dry cloth.

STONES

To protect your jewelry, we advise not to wear it in extreme temperatures or during extreme activities. We recommend using a soft brush and warm water to gently remove dirt or grease.
