Re.: Integration Instructions

FCC ID: **XK5-SMF241**

Application Purpose: Change in FCC ID

Type of Device: **Wireless Communication System Module**

To whom it may concern:

The new Grantee “steute Technologies GmbH & Co. KG” received permission from the original Grantee “u-blox AG” (GC: XPY) to use their detailed integration manual as submitted for the original certification (FCC ID: XPYNINAB30), because this modular approved transmitter will only be integrated by “steute Technologies GmbH & Co. KG” in their own final host devices and never be marketed separately to any third parties – therefore no individual integration manual for marketing purposes is necessary.

The original integration instructions includes details about the proper integration and further guidance for the integration to assure compliance of the final host device with the applicable regulations. The labelling of the RF Module and the host devices will reflect the declared product identification by “steute Technologies GmbH & Co. KG”.

Sincerely,

Sandra Feigeltsh
