Hardware Installation

Step 1. Apply pressure to release the lock, turn it counter-clockwise.

Step 2. Gently insert the SSD into the slot.

Note: Make sure the SSD contacts (“golden fingers”) are clean prior to installation.

Step 3. Align the fan module and press down to secure.

Note: Make sure the SSDs are carefully, but securely installed into each E1.S port. Loose connections can cause a variety of stability and performance issues, and may ultimately result in data loss.

Step 4. Power up the SSD external power supply.

Note: If the external power supply is not powered on, the SSDs may drop offline or remain undetected, which could lead to data loss.

SSD7749E relies on two power sources to support eight SSDs; power supplied through the PCIe bus, and power from the system's PSU via an external 6 pin PCIe power cable. If the external cable is not connected, there will be insufficient power to support all 8 SSD's; this may cause the SSDs to drop offline.

Note: *The SSD7749E does not require the external power cord when used with a Mac Pro 2019.*

Connect 6 pin PCIe power cable

Note: *Please be sure to connect NVMe before using the product to reduce the occurrence of unnecessary errors!*

Note: *Make sure to install the driver before physically installing the SSD7749E.*
