(3) Motion Detection

Long press the " ▄◀ " button in the video mode to enter the motion detection mode. If the object movement is detected, the video will start. If the object movement is not detected, the video will stop

automatically. **Long-press "**▉◀**"** to exit the motion detection recording.

(Once detect a move will recording for minimum 1mins until without move)

(4) Loop Recording

Auto loop recording: when the disk has been full, continued recording will overwrite the previous video.

"Stop Loop" means auto Stop recording after card has been full.

(5) Car Mode

Start the car mode, USB power on will automatically turn on and start recording, USB power off will save the video and turn off the computer.

(6) Fill Light Switch

In any mode of power on, **long press** the "💡" key to turn on the LED light, and **long press** the "💡" key again to turn off the LED light.

(7) Light up/ down the screen

In any mode of mode on, short press "💡" to close the screen, and short press any key to light up the screen.

(8) Image Flip

The default back clip direction of the image. If you need to rotate the lens for shooting, press " 🔄 " to adjust the image.

(9) Reset

When the machine crashes and the key is invalid, it cannot be used normally. Insert the point of the "reset hole" with the **reset pin we equipped** to reset the machine, and it can be used normally after the reset.

● WiFi Connection

Please use the QR code below to download and install "Viidure", or search and download "Viidure" in Google Play or App Store.
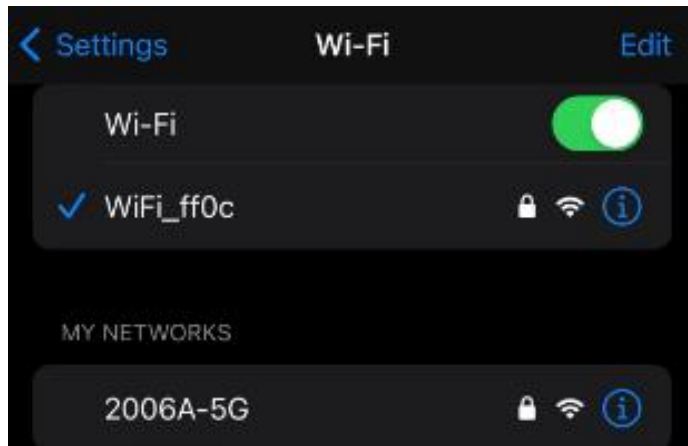

(1) WiFi Switch:

In standby mode, long press the " 🔄 " Left-first key to turn on/off WiFi and enter/quit the WiFi mode .

(2) WiFi connection:

Search and connect the network named **WiFi_** (**such as WiFi_44BA**) in the WiFi Settings of the mobile phone or tablet.

After successful connection, open the "Viidure App" to enter the main interface and click "Continuous Recorder" to enter the real-time preview interface.

Is that state normal in Wi-Fi mode?

Normal, Please don't worry, just still follow our steps to do, that the problem won't affect connection.

When your phone will disconnect constantly, Please follow these steps:

1) Recommend you can re-download the app, and please choose to allow the app's wifi use, otherwise will cause the app could not connect to the internet [wifi]

2) Choosing still connect to this no internet Wi-Fi when you turn on the hotspot mode of the camera and

connect to its Wi-Fi [name usually calls "Wifi_xxx"], otherwise the connection will stop constantly since you don't offer the permission to keep its connecting.
