

XLC-25-MAS Series
(Independent type)

XLC-25-MA Series
(Built-in type)

User's Manual

Features

- Constant power mode output with multiple stage selectable by DIP switch
- Plastic housing with class II and PFC design
- Flicker free, complying with CE ErP directive
- Standby power consumption <0.5W
- Meet emergency lighting (EL) application
- Minimum dimming level 0.5%
- Matter over thread, Matter 1.3 specification
- 5 years warranty

Applications

- Recessed Light
- Down Light
- Panel Light
- Commercial Lighting
- Decorative Lighting
- Matter wireless Lighting

Description

XLC-25-MA series is a 25W with constant power output LED driver . It can operate from 100~305VAC and output current ranging between 300 mA to 1050 mA selectable by DIP switch .Thanks to high efficiency up to 88%, it is able to operate for -25℃~85℃ case temperature under free air convection. XLC-25-MA series is designed based on latest safety regulations with Matter wireless dimming . It provides more flexibility for LED Lighting application.

NOTE	1. All parameters NOT specially mentioned are measured at 230VAC input, rated current and 25℃ of ambient temperature. 2. Output hiccups under no-load condition. 3. Please refer to "DRIVER METHODS OF LED MODULE". 4. De-rating may be need under low input voltages. Please refer to "STATIC CHARACTERISTIC" sections for details. 5. Length of set up time is measured at first cold start. Turning ON/OFF the driver may lead to increase of the set up time. 6. Efficiency is measured at 500mA/50V output set by dip-switch. 7. Standby power consumption is measured at 230VAC. 8. Flicker is measured at full load with LED modules. 9. The driver is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again. (as available on https://www.meanwell.com/Upload/PDF/EMI_statement_en.pdf) 10. For XLC(except -S) series: RCM is on a voluntary basis and meets relevant IEC or AS/NZS standards complying with AS/NZS 4417.1. For XLC-S series: RCM is on a voluntary basis. Non IC classification Independent LED control gear is not suitable for residential installations. 11. This series meets the typical life expectancy of >50,000 hours of operation when Tcase, particularly (Tc point (or TMP, per DLC), is about 70℃ or less. 12.The ambient temperature de-rating of 3.5℃/1000m with fanless models and 5℃/1000m with fan models for operating altitude higher than 2000m(6500ft). 13. CONSTANT POWER TABLE

XLC-25-H-MA is a multiple-stage constant power driver, selection of output current through DIP switch is exhibited below.

Vo	Io	DIP S.W	1	2	3
9~54V	300mA		----	----	----
9~54V	350mA		----	----	ON
9~54V	400mA		----	ON	----
9~50V	500mA		----	ON	ON
9~42V	600mA		ON	----	----
9~36V	700mA(default)		ON	----	ON
9~28V	900mA		ON	ON	----
9~24V	1050mA		ON	ON	ON

Note: The operating voltage range which show on this table is recommend to use.

FACTORY RESET

※ By RESET BUTTON

Press and hold the reset button for 10 seconds. When the LED indicator flashes quickly, release the button. The factory reset will then be completed.

※ By AC ON/OFF

To perform factory reset through AC ON/OFF, the following process must be strictly followed. If the AC ON/OFF process is correct, the output light will flash for 15 seconds. When the flashing stop, it means the factory reset is completed. This operation is consistent with the factory reset effect performed by long-pressing the reset button.

AC ON/OFF process to executes factory reset:

Phase	Duration	AC status
1	10-15s	ON
2	>30s	OFF
3	2-5s	ON
4	>30s	OFF
5	10-15s	ON
6	>30s	OFF
7	2-5s	ON
8	>30s	OFF
9	2-5s	ON
10	>30s	OFF
11	>25s	ON(should wait until output light stop flashing)

If there is a malfunction in the 'AC ON/OFF process', the process can be reset by the following method, starting from stage 1 again.

Method 1: AC ON time exceeds 25 seconds

Method 2: AC ON times for 2-5s and twice

■ PLACEMENT

Matter device has an integrated antenna for easy integration. In order to maximize the range in every direction, some design guidelines should be taken into consideration when mounting the device.

The antenna positions of the device are shown in the figure below:

- Keep the device as far away as possible from vertical metal structures.
- When the device is mounted on a metal plate, the antenna should not be obscured, and there needs to be a cutout under the antenna to ensure that the RF signal can be transmitted.
- The device's communication range may be influenced by environmental factors and installation positioning, necessitating on-site adjustments and testing.
