### What does HD Video Monitor do?

This monitor is a multi-functional device that you can connect to your laptop or monitor in the home or away. This monitor is a multi-functional device that you can connect to your laptop or monitor in the home or away. This monitor is a multi-functional device that you can connect to your laptop or monitor in the home or away.

You can monitor your baby from anywhere in the world. You can monitor your baby from anywhere in the world. You can monitor your baby from anywhere in the world. You can monitor your baby from anywhere in the world. You can monitor your baby from anywhere in the world.

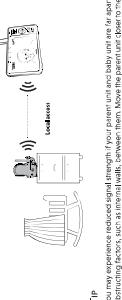

The app can be downloaded from the App Store or the Google Play™ Store, directly from your smartphone or mobile device.

## OVERVIEW

## HOW THE SYSTEM WORKS

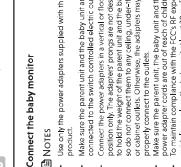

**Direct mode**  
The parent unit and the baby unit of your video monitor connect to each other in **Direct mode**. By default, when you turn it on, it streams live video right out of the base. You can turn off Direct mode if you want to use the video camera on the baby unit.

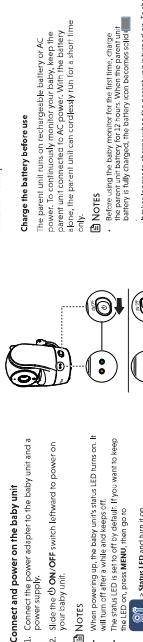

- \* Tip: You may experience reduced signal strength if your parent unit and baby unit are far apart or there are obstacles between them. If this happens, we recommend that you turn off Direct mode and instead connect your parent unit and baby unit to a wireless router.
- Router mode**  
You can continue using your video monitor in **Router mode** even if your parent unit and baby unit are not directly connected to each other. Router mode is a communication system that allows your parent unit and baby unit to communicate through a third device, such as a wireless router, which acts as a repeater. To improve the connection between your parent unit and baby unit, we recommend that you move the baby unit closer to the wireless router.
- Note:** You can still use the video camera on the baby unit while in Router mode.

## CONNECT, CHARGE AND POWER ON THE BABY MONITOR

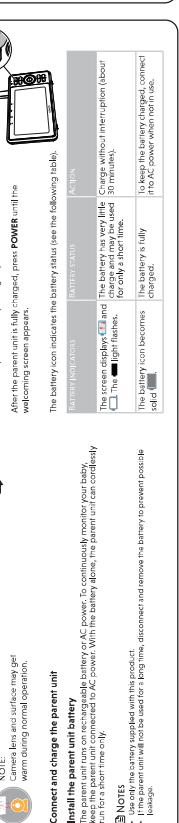

### Connect the baby monitor

### Charge the battery before use

### Charge the battery after use

### Install the parent unit battery

The parent unit runs on rechargeable battery or AC power. To continuously monitor your baby, keep the parent unit connected to AC power. When the battery is low, the monitor will alert you to charge the battery.

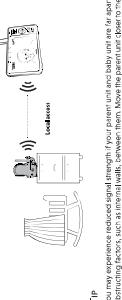

### Protect your privacy and online security

#### Important security tips

#### Notes
