

APP “Lufitcode” Setting Guide

How to make the Watch works properly and no disconnect?

1. Pls make sure the software version of your smart phone is over Android 5.0 or iOS9.0 or above, and Bluetooth 4.0 or above.
2. Pls check whether the Watch was connected to another phone or not, swipe down the Watch face and check icon "BLE" is green or gray. If green color, it means Watch was connected with other phones, please unbind it first.

3. Please do not connect watch by smartphone's Bluetooth, or else your watch will not connect to app and many features of the watch may not work properly. If you have connected by Bluetooth already, please forget the device first and connect by app again.
4. Pls make sure you have enabled the Bluetooth function and GPS Location of your phone turn on. (we recommend you to exit all of other APP and reopen). And then you should "ADD DEVICE" from app, not Bluetooth setting.
5. There is no barrier between the Watch and your smartphone. While connecting, pls place them together. The normal direct line is 10meters and barrier-free.
6. Please charge in time when the watch is in low battery power. When its battery is lower than 10%, the Bluetooth function will be turned off.
7. Make sure the watch screen is on when the mobile phone APP is searching Bluetooth device. When the watch screen lights up, the Bluetooth of the watch will send a 30s broadcast signal, and the watch will reconnects within 30s.
8. If above steps still not works, please swipe down the watch--Settings--Reset--Turn off. Delete app on your smartphone and Turn off your phone and Restart. (If iphone, pls ignore the phone settings---Bluetooth----"SmartWatch")
9. Pls reinstall App "Lufitcode", ①always ALLOW app to acquire phone's info, ②set background running permission, ③ignore battery saving ④set the app to APP whitelist. PLEASE carefully check our background setting video of Samsung phones.
