

Trigger|io

USB/MIDI PAD TRIGGER INTERFACE

The Alesis Trigger|io is a powerful new electronic percussion interface designed to capture the feel of a real drum performance while also harnessing the expansive capability of software and hardware sound modules. The Trigger|io converts input from your favorite percussion pads to make them usable as MIDI note messages for triggering sounds in software and hardware devices.

Featuring both MIDI and USB connectivity, the Trigger|io can be connected to your favorite software or hardware synth or drum module, and comes bundled with FXpansion's BFD Lite—a professional software drum module with high-quality acoustic and electronic drum kit libraries.
