

Instruction Diagram

JST Connection

Features

- 1W VTX power, suitable for Long Range flight with good stability.
- 84 power levels: 25mW/30mW/50mW/100mW/150mW/200mW/300mW/500mW.
- Two-layer board coating, aluminum separate power BEC and main board, reducing and eliminating from the thermal interference.
- Temperature control protection function that can prevent high temperature burning.
- Wide voltage input, accepts 7V-30V voltage input.
- VTX current protection to IRC. Sharp supports 1000 parameter adjustment.
- VTX has a microswitch and trim return of Stream sound.
- Has 3 regional frequency table to meet the needs of various regions.
- Dual frequency button, three indicator lights, easy to operate.
- Balancing holes at 12.5mmx2.5mm.

How to set

- How to set Channel:
Press and hold for 2 seconds to enter the Channel Selection. Once light flashing short Press 1 second to change the channel.

Support IRC Tramp Protocol

Ultra1600 VTR supports the IRC Tramp protocol and the modification of video transmission parameters through the remote control, including frequency, working power and so on.

NOTE: For BetaFlight flight controller firmware version BetaFlight 4.1.0, you need update a VTX table in the flight controller before using the remote control to modify the video transmitter parameters correctly. [ULTRA1600_VTX_HW.json](#)

For the use of the video transmission table, please refer to this article "How to Set Betaflight VTX Table - SmartRadio Transmitter Configuration" by Oscar Liang.
