A NOTE FROM THE HEAD MONSTER.

Neil Lee,
The Head Monster

THANK YOU for purchasing the Monster Power GreenPower™ HDP 850G PowerCenter. Today's high definition components use digital microprocessors to deliver incredible picture and sound. But this delicate digital circuitry is vulnerable to even small variations in power. The HDP 850G features advanced surge protection and power filtering to protect your home theater equipment, plus GreenPower outlets to stop standby mode energy waste.

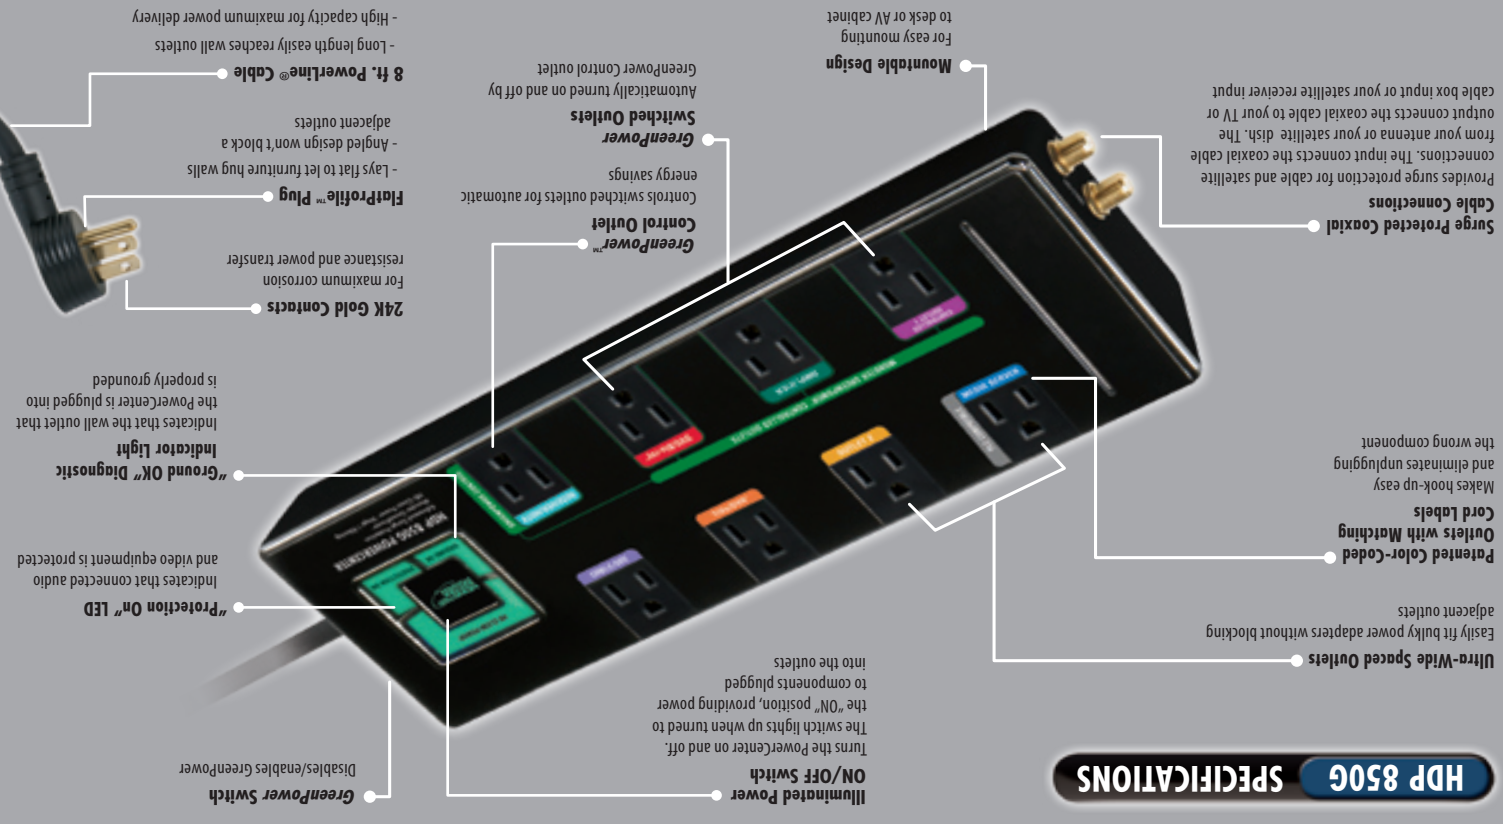

The HDP 850G features GreenPower switched outlets that automatically shut off when you're not using the equipment connected to them. This stops energy waste caused by flatscreen TVs, DVD/Blu-ray Disc™ players, subwoofers and other components in stand-by mode.

Exclusive Dual Mode Plus™ automatic disconnect protection circuitry protects against the most powerful surges. There are also surge-protected coax connections to protect against dangerous power conditions on cable and satellite lines.

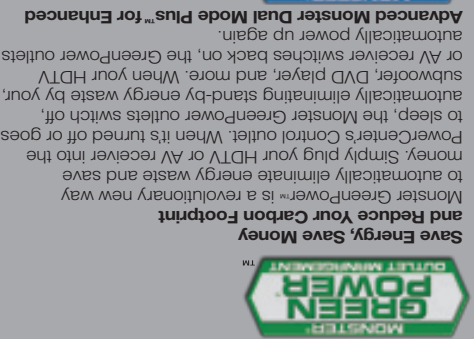

Patented Monster HD Clean Power is specifically engineered for today's high definition home theater components. Its filters are precision-engineered to virtually stop the electromagnetic and radio frequency noise that goes right through typical surge Mode Plus™ circuitry automatically disconnects your AV equipment from the live power line to isolate your equipment from dangerous AC power conditions. Dual Mode Plus also sounds an alarm to alert you that your PowerCenter has protected your electronics.

These days, AV components are better than ever, providing surround sound and razor sharp HD picture. With Monster Power, you'll have peace of mind knowing you paid for, while saving money and energy with GreenPower.

MONSTER POWERCENTER™ HDP 850G FEATURES

"Small surges can occur several times a day or a hundred times an hour ranging from several thousand volts to under 100 volts. A single, powerful surge literally melts, welds, pits and burns its way through solid state circuits." - P&G, One of the U.S. Largest Power Utilities

The HDP 850G features HD Clean Power filtering that is precision-engineered to remove other electronics from unnecessary wear. HD Clean Power maximizes your equipment's lifespan and ensures the best possible picture and sound performance.

However, ordinary surge protectors can't remove the effects of dirty power. theater equipment, reducing their performance and potentially shortening their lives. This "dirty power" stresses the delicate digital circuitry inside HDTVs and other home and electronics: cell phones, computers, even your lights, all contribute to the problem. Your home's electricity is full of noise and interference caused by all of your appliances and electronics: cell phones, computers, even your lights, all contribute to the problem.

Patented HD Clean Power Removes Noise and Interference to Protect Your AV Equipment and Maximize Performance
