

Digitized Automation for a Changing World

Delta Compact Modular Mid-range PLC AS Series

Flexible, Smart, Friendly - The Best Choice for a Controller of Automated Equipment

AS Series

The AS Series Compact Modular Mid-range PLC is a high performance multi-purpose controller designed for all kinds of automated equipment. It features Delta's self-developed 32-bit SoC CPUs for enhanced execution speed (40k steps/ms) and supports up to 32 extension modules or up to 1,024 inputs/outputs. The AS series provides accurate positioning control for up to 8 axes via CANopen motion network and 6 axes via pulse control (200 kHz). It is widely used in diverse automated equipment such as for electronics manufacturing, labeling, food packaging, and textile machines.

The AS Series Controller is equipped with CANopen and EtherNet/IP network communication for high-speed data transmission. The professional yet simple editing software ISPSoft delivers quick hardware and network configuration with built-in function blocks for different industries. It also provides multi-layer password protection for enhanced system security.

The AS Series adopts a rackless design and DIN rail clips for fast vertical module installation. The simple shape and dark gray exterior of the AS series help resist stains and dirt in harsh industrial environments.

High Efficiency Computing

- Advanced CPU performance
- Optimized execution efficiency
- Optimized I/O update rate
- Permanent data backup, no battery required

Accurate Axis Control

- Delta CANopen positioning control
- Simple control instructions
- High-speed pulse positioning control
- High-speed counter

AS500 Motion Control Solution

- AS500 EtherCAT motion control system
- AS500 CANopen motion control system
- Higher scalability in DVP-MC & AS500
- Highly integrated CPU design

AX-3 CODESYS Control Solution

- AX-3 CODESYS control system
- Benefits of CoDeSys platform
- Highly integrated CPU design

Simple Installation

- Easy installation process
- Convenient grounding protection
- Screwless installation procedure
- Loose-proof clip-type terminal block

Industrial Network Solution

- EtherNet/IP solution
- Remote I/O solution
- Serial communication solution

Programming & Diagnosis

- Modular programming structure
- Convenient editing environment
- Easy hardware configuration and parameter setting
- Complete setting tools
- Multiple password protection

High Efficiency Computing

Delta's self-developed AS200/AS300 Series CPU provides 32-bit high-performance computing and a real-time operation system. As the core of a high-efficiency controller, it helps increase the productivity and adaptability of demanding equipment.

Advanced CPU Performance

■ High execution speed

- Max. number of inputs/outputs: 1,024
- Max. extension ability: 32 modules

LD instruction of AS200/300 series CPU

Optimized Execution Efficiency

General Scanning Method

Standard simplex scanning which sequentially goes through instructions by fixed schedule operation (e.g. I/O update).

It significantly affects overall execution speed.

AS Series Scanning Method

Fixed schedule operations will be automatically processed by the CPU background program when scanning starts. This significantly enhances execution speed.

Optimized I/O updates

Common in the industry: PLC module bus update via serial communication

- General serial communication: the signal is sequentially sent from the 1st module to the last module. The more modules the longer I/O update time it takes.

AS Series: PLC module bus update via optimized CAN protocol

- CAN protocol: The signal is sent via optimized CAN bus protocol. The I/O update time is not significantly prolonged even with more modules.

Note: The real updating performance will be different for different extension modules.

Permanent data backup, no battery required

Non-volatile memory material for data backup

	PLC power off
PLC programs	permanent backup
Latched area	permanent backup

Lithium button battery for Real Time Clock (RTC) function

	PLC power off
RTC	keeps accurate time

Accurate Axis Control - Positioning Control Solution

AS200/300 CPU

CANopen DS301

AS200/300 positioning control - Delta's CANopen control

- AS200/300 supports up to 8 Delta servo drives and 8 AC motor drives (AS-FCOPM function card is needed for the AS300)
- Fast positioning configuration in one initialization instruction without building CANopen data exchange table
- Axis control by instructions provides easy maintenance and high PLC program readability

Simple control instructions for Delta drives (AS200/300 series CPU only)

- Initialization: INITC
- Relative positioning: DRVIC (Servo only)
- Read and write parameter: COPRW
- Acceleration and deceleration: CASD
- Constant speed control: PLSVC
- Absolute positioning: DRVAC (Servo only)
- Start/Stop: ASDON
- Homing: ZRNC (Servo only)

ASDA-A2 back and forth motion control in 4 steps

Dynamic modification of next speed and position.

Pulse 

Motion control of max. 6 Delta AC Servo Drives

■ Positioning control - high-speed pulse

- AS332T-A/AS332P-A transistor CPU: 6 axes (or 12 channels) 200 kHz
- AS324MT-A differential CPU: 2 axes 4 MHz + 4 axes 200 kHz
- Supports positioning planning table for fast positioning planning and path simulation (AS200/300 series CPU only)
- Choose any given 2 axes for linear and arc interpolation

* Note: Please refer to the product specification section (P.28) for more information on CPU models

■ High-speed counter

- Real-time high precision monitoring:
AS332T-A/AS332P-A transistor CPU: 6 channels 200 kHz
AS324MT-A differential CPU: 2 channels 4 MHz/4 channels 200 kHz
- Up to 16 external input interrupts
- High-speed counter setting tools

* Note: Please refer to the product specification section (P.28) for more information on CPU models

AS500 Motion Control Solution

■ AS500 EtherCAT motion control system

- AS516E CPU supports up to 16 Delta EtherCAT servos (min. sync time: 1 ms/16 axes)
- AS532ES/AS564ES CPUs support up to 32/64 Delta EtherCAT servos (Point-to-Point mode)
- Supports AS power, DIO, AIO, temperature and load cell expansion modules (max. 32 modules)
- 1 GHz processor provides high operation performance
- Provides various motion commands: position, velocity, torque, multi-axis interpolation, E-gear, E-CAM, G-code, and more
- Built-in 16 DI & 8 DO, 2 incremental encoders, SSI absolute encoder, RS-232/485, Ethernet, CANopen DS301 and EtherCAT interfaces

■ AS500 CANopen motion control system

- AS524C CPU supports up to 24 axes Delta CANopen servos (min. sync time: 2 ms/4 axes)
- Supports AS power, DIO, AIO, temperature and load cell expansion modules (max. 32 modules)
- 1 GHz processor provides high operation performance
- Provides various motion commands: position, velocity, torque, multi-axis interpolation, E-gear, E-CAM, G-code, and more
- Built-in 16 DI & 8 DO, 2 incremental encoders, SSI absolute encoder, RS-232/485, Ethernet (x2), CANopen DS301 and CANopen motion interfaces

■ Higher scalability in DVP-MC and AS500

AS500 motion CPUs are designed with the Delta DVP-MC motion platform, which allows users to scale up/down their systems to AS/DVP systems without rewriting all programs

■ Highly integrated CPU design

The AS500 motion control CPUs feature various built-in I/O and communication protocols to satisfy customer needs for compact design and high performance

AX-3 CODESYS Control Solution

■ AX-3 CODESYS Control System

- Provides multiple controller solutions
 - EtherCAT motion controllers
 - AX-308E CPU supports up to 8 EtherCAT axes (min. sync time: 2 ms/8 axes)
 - AX-304EL/AX-364EL CPUs support up to 4/64 EtherCAT axes (Point-to-Point mode)
 - Logical controllers
 - AX-300N/AX-324N CPUs built-in 0/24 DIO points
- Supports AS power, DIO, AIO and temperature expansion modules (max. 32 modules)
- High performance, min. command execution time: 5 ns
- Provides various motion commands: position, velocity, torque, multi-axis interpolation, E-gear, E-CAM, and more
- Built-in 16 DI & 8 DO, 2 incremental encoders, SSI absolute encoder, RS-232/485, Ethernet and EtherCAT interfaces

■ Benefits of CODESYS platform

- IEC61131-3 standards
- High performance and stable operation system
- Enhances project development efficiency with a standardized programming and controller development platform for parameter setting, configuration and PLCOpen editing

■ User-friendly programming software New

DIADesigner+ is a new programming software for Delta AX series CPUs; it provides an optimized user-friendly programming environment and reduces programming time and effort for users

The user interface of built-in IO and axis parameter configuration

■ Highly integrated CPU design

The AX-3 motion control CPUs feature various built-in I/O and communication protocols to satisfy customer needs for compact design and high performance

Simple Installation

■ Easy installation

- Space-saving design, suitable for installation in control panels

■ Rackless DIN-rail installation

➤ Robust slot and clip interlocking design

■ Fast disassembly

- Release the clip ring to easily take out the module from the front without moving adjacent modules

■ Simple installation process

- Press the clip rings and push the module to the desired position until you hear a "click" to finish installation

■ Convenient grounding protection

- DIN-rail installation: CPU module and expansion modules can be installed directly on DIN-rail without a backplane
- Installation with screws: pull out the installation clip ring and directly install it on the panel
- Both methods are equipped with ground protection

■ Screwless and time-saving installation

- Time-saving installation
Complete I/O wiring in 1 second

■ Robust loose-proof spring clamp terminal block

- In commonly used spring clamp terminal blocks, the clamping force is determined by the spring material, which decreases with the aging of the spring.

The green arrow is the clamping force, and the red arrow is the pull-out force.

- The AS Series adopts a full-covered spring clamp design that enhances the clamping force. When the wire is pulled-out (red arrow) and the spring moves up (green arrow), a downward force is generated (blue arrow) to clamp the wire.

Industrial Network Solution

EtherNet/IP Solution

The open industrial Ethernet communication protocol for real-time control and data collection

EtherNet/IP[®]

- Max. connection resource: 32
- Max. data transmission: 500 bytes/connection
- Performance: slave station data update in 1 scan time

Flexible network system configuration

- Supports star, linear network topology for fast expansion and management on production lines
- Compatible with IT network, no independent network or IT technician required
- Combines with Delta IES solution to construct IoT for more automation applications and industrial 4.0 upgrades

One cable, one network

- Complete Delta EtherNet/IP solution connects different equipment via Ethernet cable to simplify system networking
- Replaces traditional 3-layer industrial network structure with seamless connection via 100 MB high-speed network
- Complete industrial network diagnosis to shorten debug time

■ Software integration

- Consistent data exchange interface shortens learning time with fast system configuration
- Provides Delta's equipment parameter list for quick parameter matching without looking into a detailed manual
- EDS File provides quick connection with EtherNet/IP products of other brands

■ Accurate data update

- Provides real-time cyclic and acyclic data transmission and defines data priority between equipment
- Establishes multiple CIP links and defines different register priorities with one piece of equipment
- Executes data update based on user RPI. Updates all slave station data in one scan time
- Enhances stability by 70% compared to traditional Modbus TCP

Parameter List

- Built-in parameter list of Delta's products

The screenshot shows a list of parameters for Delta's products. The list includes various parameters such as 'IP Address', 'Subnet Mask', 'Gateway', and 'Port'. Each parameter is listed with its corresponding value and a description.

Data Exchange Table

- Data exchange via table blanks filling. PLC programming is not required

The screenshot shows the Data Exchange Table interface. It displays a table with columns for 'Data Exchange Name', 'Module Name', 'Start Bit', 'End Bit', and 'Data Exchange Setting'. The table is currently empty, allowing for data entry.

Data Input/Output Corresponding Table

- Preset data exchange on corresponding parameters
- Connecting equipment editing on corresponding parameters

The screenshot shows the Data Input/Output Corresponding Table interface. It displays a table with columns for 'Data Input/Output Name', 'Module Name', 'Start Bit', 'End Bit', and 'Data Input/Output Setting'. The table is currently empty, allowing for data entry.

Data Exchange Diagnosis

Serial Communication Solution

■ Modbus Mode

- Easy data exchange configuration

■ Real-time history log diagnosis

- AS00SCM stores 2k bytes history log; SCMSoft directly displays the log for real-time communication status monitoring with no additional monitoring software required

■ UD Link Mode (User-defined)

- Easy connection to end equipment via special communication protocols

Traditional programming structure

Instruction receiving, accessing, editing, transmitting, sequence control

Connection to end equipment via special communication protocols

- Edits the transmitting/receiving packets via SCMSoft; format exchange and checksum calculation via AS00SCM
- Packet content auto-combination for logic control in PLC, reducing PLC program complexity
- Max. 1,000 transmitting/receiving packets

Modular Program Structure

Traditional program structure

Errors are often found in large-scale programs under a traditional structure and are hard to debug while increasing maintenance cost

Modular program structure

Programming organization unit (POU) enables easy management in large-scale programs with high development efficiency

Modular Program Structure

Note: Actual support functions will vary by series

Convenient Programming

- **User-defined data type**

In addition to basic data types, users can define structures and enumerations for flexible programming

- On-line programming/update

Supports program editing in monitoring mode and program updates during equipment operation for convenient debugging and maintenance

- **Debugging mode**

Supports breakpoints, single step execution and other functions to enhance debugging efficiency

Multiple Programming Languages

- Supports multiple programming languages in the same project

- **Ladder Diagram (LD)**

ISPSoft provides a programming interface with the widely used LD language for faster programming

- **Structured Text (ST), C Language**

Similar programming method to advanced programming language. It provides more convenient editing for complicated expression

```
0008 /* Calculate the Field Rate */
0009 IF ( BaseVal <= (MaxVal - 1) ) THEN
0010
0011     FieldVal := BaseVal + 1
0012
0013 ELSE
0014
0015     MaxVal := MaxVal + 1
0016
0017 END IF
0018
```

- **Continuous Function Chart (CFC)**

CFC provides more advanced applications than FBD;
it supports data feedback, direct display of data stream
and execution sequence for motion control and
sequence-centered application

Note: ISPSOft V3.01 supports CFC language

- **Sequential Function Chart (SFC)**

Direct and easy expression
for the steps in flow charts,
suitable for applications that
require process control

Note: Actual support functions will vary by series

Easy Hardware Configuration and Parameter Setting

HWCONFIG

- **Graphic panel for module configuration**
Quick setup with automatic configuration imported by barcode scanning
- **I/O listing**
Direct display for corresponding device addresses after configuration

Note: Fill the table to configure module parameters quickly.
From/To instruction is not required for module initialization.

- **Parameter setting**
Fast parameter setting on controller and modules without manual reference or programming

- **Module configuration method**
- **Smart module configuration**
Supports an advanced planning tool for a variety of network modules

Note: Actual support functions will vary by series

Complete Diagnosis Tools for Quick and Effective System Monitoring

Data Logger/Tracer

- **Real-time monitoring:**

High-speed tracer for fast sampling within 1 scanning cycle

- **Stable logging:**

Long-time data logger savings of up to 32,768 data records, which can be transferred to SD card

- **Precise data acquisition:**

Supports a variety of sampling intervals and trigger modes

- **Convenient comparison:**

Multiple data logs in various data formats can be recorded at the same time for comparison

- **Efficient data analysis:**

Supports trend display, scaling, arrangement, merge and measurement

Real-time Module Monitoring

- **Visualized monitoring**

Direct monitoring interface provides real-time status on modules via LED indicators

- **Module comparison**

Real-time inspection of actual module settings to ensure consistency

- **Error logs**

Immediate inquiry for error messages and logs of anomalies

- **Module information**

Provides model name and version of current modules

Note: Actual support functions will vary by series

Convenient Software Wizards for Effortless Planning (AS200 / 300 series only)

Positioning planning table

2D simulation

Intuitive 2D track simulation without complicated calculation for real-time path planning

Path list

Multiple combinations for positioning modes and tracks; fast path planning via table-structured planning

Axis parameter setting

Intuitive configuration interface for easy axis parameter setting without manual reference

High-speed counter setting tool

- Counter index will display corresponding contact point, device and counter specification under counting mode
- Fast planning without manual reference for enhanced development efficiency

One-time setting

The figure shows a screenshot of the 'High Speed Counter Setting' dialog box. It includes fields for 'Type' (set to 'Hardware - 1 Phase 1 Input'), 'Input Pulse' (set to '5V/3'), 'Counter' (set to 'RC210'), and 'Arrival Value' (set to '100'). There are also checkboxes for 'OE' and 'Count'. Below these fields, there is a section for '24VDC inputs' with various settings like 'Maximum input frequency: 200kHz', 'Set Up/Down counter mode by RC210', 'Increasing/Decreasing input point: X0.0', 'Enable/disable the reset input function by RC210', 'Reset input point: X0.1', and 'Set the counting mode by SR190'.

Data backup tool - CARD Utility

Friendly guidance interface for easy data backup and restore on programs, parameters and devices

Various backup and restore methods for flexible management and operation

Data backup to PC

Data backup to SD card

Multiple Security Protection for Programs and Data

■ Security: provides 6 types of program protection for data safety

- 16-digit password protection on main program
- 16-digit password protection on FBs
- Access denial mechanism on error login
- Data upload protection function
- Verification between Project (Programming ID) and CPU (PLC ID)

- Prevents direct copy from IC (AS200/300 series only)

Note: Actual support functions will vary by series
