Please read this user manual first!

Dear Customer,

Thank you for purchasing this Felco product. We hope that you get the best results from your product which has been manufactured with high quality and state-of-the-art technology. Therefore, please read this entire user manual and all other accompanying documents carefully before using the product and keep this as a reference for future use. If you handover the product to someone else, give the user manual as well. Follow all warnings and information in the user manual.

Remember that this user manual is also applicable for several other models.

Differences between models will be identified in the manual.

Explanation of symbols

Throughout this user manual the following symbols are used:

Important information or useful hints about usage.

Warning of hazardous situations with regard to life and property.

Warning of electric shock.

Warning of risk of fire.

Warning of hot surfaces.

Important instructions and warnings for safety and environment

This section contains safety instructions that will help protect from risk of personal injury or property damage. Failure to follow these instructions shall void any warranty.

General safety

- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.
- The appliance is not to be used by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction. Children should be supervised and ensure they do not play with the appliance.
- If the product is handed over to someone else for personal use or second-hand use purposes, the user manual, product labels and other relevant documents and parts should be also given.
- Never place the product on a carpet-covered floor. Otherwise, lack of airflow beneath the product will cause electrical parts to overheat. This will cause problems with your product.
- Installation and repair procedures must always be performed by Authorised Service Agents. The manufacturer shall not be held responsible for damages arising from procedures carried out by unauthorised persons which may also void the

warranty. Before installation, read the instructions carefully.

- Do not operate the product if it is defective or has any visible damage.
- Ensure that the product function knobs are switched off after every use.

Electrical safety

- If the product has a failure, it should not be operated unless it is repaired by the Authorized Service Agent. There is the risk of electric shock!
- Only connect the product to a grounded outlet/line with the voltage and protection as specified in the "technical specifications". Have the grounding installation made by a qualified electrician while using the product with or without a transformer. Our company shall not be liable for any problems arising due to the product not being earthed in accordance with the local regulations.
- Never wash the product by spreading or pouring water onto it! There is the risk of electric shock!
- The product must be disconnected during installation, maintenance, clearing and repairing procedures.
- If the power connection cable for the product is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.
- Only use the connector cable specified in the "Technical specifications".
- The appliance must be installed so that it can be completely disconnected from the mains supply. The separation must be provided by a switch built into the fixed electrical installation, according to construction regulations.
- Rear surface of the oven gets hot when it is in use. Make sure that the electrical connection does not contact the rear surface; otherwise, connections can get damaged.

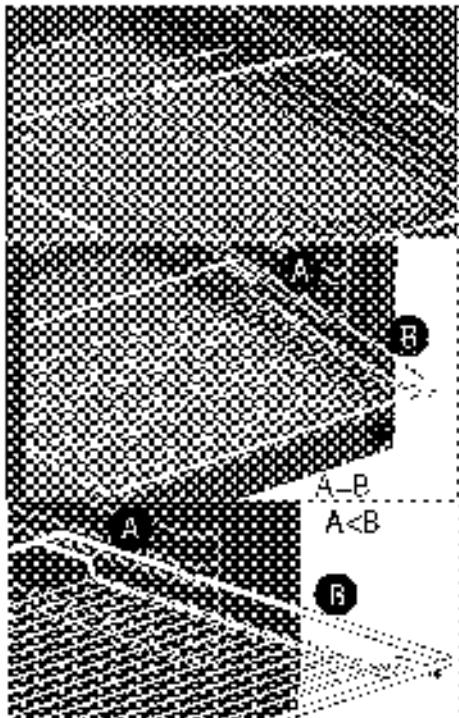

- Do not trap the mains cable between the oven door and frame and do not route it over hot surfaces. Otherwise, cable insulation may melt and cause fire as a result of short circuit.
- Any work on electrical equipment and systems should only be carried out by authorized and qualified persons.
- In case of any damage, switch off the product and disconnect it from the mains. To do this, turn off appropriate switch in the consumer unit in your home.
- Make sure that fuse rating is compatible with the product.

Product safety

- **WARNING:** The appliance and its accessible parts become hot during use. Care should be taken to avoid touching heating elements. Children less than 8 years of age shall be kept away unless continuously supervised.
- Never use the product when your judgment or coordination is impaired by the use of alcohol and/or drugs.
- Be careful when using alcoholic drinks in your dishes. Alcohol evaporates at high temperatures and may cause fire since it can ignite when it comes into contact with hot surfaces.
- **Food Poisoning Hazard:** Do not let food sit in oven for more than 1 hour before or after cooking. Doing so can result in food poisoning or sickness.
- Do not place any flammable materials close to the product as the sides may become hot during use.
- During use the appliance becomes hot. Care should be taken to avoid touching heating elements inside the oven.
- Keep all ventilation slots clear of obstructions.
- Do not heat closed tins and glass jars in the oven. The pressure that would build-up in the tin/jar may cause it to burst.
- Do not place baking trays, dishes or aluminium foil directly onto the bottom of the oven. The heat

accumulation might damage the bottom of the over.

- Don't line the grill pan with aluminium foil, as this could result in an increase risk of fire or damage to your cooker.
- Do not use harsh abrasive cleaners or sharp metal scrapers to clear the over door glass since they can scratch the surface, which may result in shattering of the glass.
- Do not use steam cleaners to clear the appliance as this may cause an electric shock.
- (Varies depending on the product model.)
Placing the wire shelf and tray onto the wire racks properly
It is important to place the wire shelf and/or tray onto the rack properly. Slide the wire shelf or tray between 2 rails and make sure that it is balanced before placing food on it (Please see the following figure).

- Do not use the product if the front door glass removed or cracked.
- Do Not use the oven handle to hang towels for drying.. Do not hang up towel, gloves, or similar textile products when the grill function is at open door.
- Always use heat resistant oven gloves when putting in or removing dishes into/from the hot over.
- Place the baking paper into the cooking pot or on to the oven accessory (tray, wire grill etc) together with the

- food and then insert all into the preheated oven.
- Remove the excess parts of the baking paper overflowing from the accessory or the pot in order to prevent the risk of touching the oven's heating elements. Never use the baking paper in an operating temperature higher than the indicated value for the baking paper.
- Do not place the baking paper directly on the base of the oven.
- **WARNING:** Ensure that the appliance is switched off before replacing the lamp to avoid the possibility of electric shock.
 - The appliance must not be installed behind a decorative door in order to avoid overheating.
 - Product must be placed directly on the floor. It must not be placed onto a base or a pedestal.
 - **WARNING:** Unattended cooking on a hob with fat or oil can be dangerous and may result in fire. NEVER try to extinguish a fire with water, but switch off the

appliance and then cover flame e.g. with a lid or a fire blanket.

- **CAUTION:** The cooking process has to be supervised. A short term cooking process has to be supervised continuously.
- **WARNING: Danger of fire:** Do not store items on the cooking surfaces.
- **WARNING:** If the surface is cracked, switch off the appliance to avoid the possibility of electric shock.
- In case of hotplate glass breakage : Immediately shut off all burners and any electrical heating element and isolate the appliance from the power supply. Do not touch the appliance surface. Do not use the appliance.
- After use, switch off the hob element by its control and do not rely on the pan detector.
- Metallic objects such as knives, forks, spoons and lids should not be placed on the hob surface since they can get hot.
- Hotplates are equipped with "Induction" technology.

Your induction hob that provides both time and money savings must be used with pots suitable for induction cooking; otherwise hotplates will not operate. See, *General information about cooking*, page 20 , selecting the pots.

- As induction hobs create a magnetic field, they may cause harmful impacts for people who use devices such as insulin pump or pacemaker.

Prevention against possible fire risk'

- Ensure all electrical connections are secure and tight to prevent risk of ageing
- Do not use damaged cables or extension cables
- Ensure liquids or moisture is not accessible to the electrical connection point

Intended use

- This product is designed for domestic use. Commercial use will void the guarantee.
- CAUTION:** This appliance is for cooking purposes only. It must not be used for other

purposes, for example room heating.

- This product should not be used for warming the plates under the grill, drying towels, dish cloths etc. by hanging them on the oven door handles. This product should also not be used for room heating purposes.
- The manufacturer shall not be liable for any damage caused by improper use or handling errors.
- The oven can be used for defrosting, baking, roasting and grilling food.

Safety for children

- WARNING:** Accessible parts may become hot during use. Young children should be kept away.
- The packaging materials will be dangerous for children. Keep the packaging materials away from children. Please dispose of all parts of the packaging according to environmental standards.
- Electrical products are dangerous to children. Keep children away from the product when it is operating

and do not allow them to play with the product.

- Do not place any items above the appliance that children may reach for.
- When the door is open, do not load any heavy object on it and do not allow children to sit on it. It may overturn or door hinges may get damaged.

Disposing of the old product

Compliance with the WEEE

Directive and Disposing of the Waste Product:

This product complies with EU WEEE Directive (2012/19/EU). This product bears a classification symbol for waste electrical and electronic equipment (WEEE).

This product has been manufactured with high quality parts and materials which can be reused and are suitable for recycling. Do not dispose of the waste product with normal domestic and other wastes at the end of its service life. Take it to the collection center for the recycling of electrical and electronic equipment. Please consult your local authorities to learn about these collection centers.

Compliance with RoHS Directive:

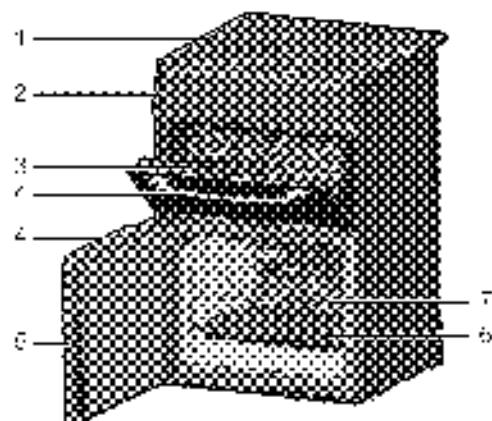

The product you have purchased complies with EU RoHS Directive (2011/65/EU), it does not contain harmful and prohibited materials specified in the Directive.

Package information

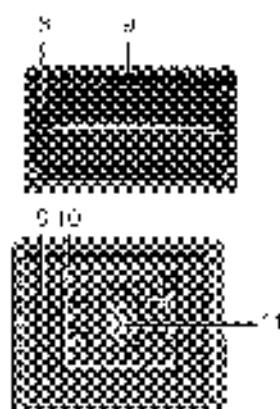

- Packaging materials: The product and packaging are manufactured from recyclable materials in accordance with our National Environmental Regulations. Do not dispose of the packaging materials together with the domestic or other wastes. Take them to the packaging material collection points designated by the local authorities.

Package contents

i Accessories supplied can vary depending on the product model. Not every accessory described in the user manual may exist on your product.

1. User manual

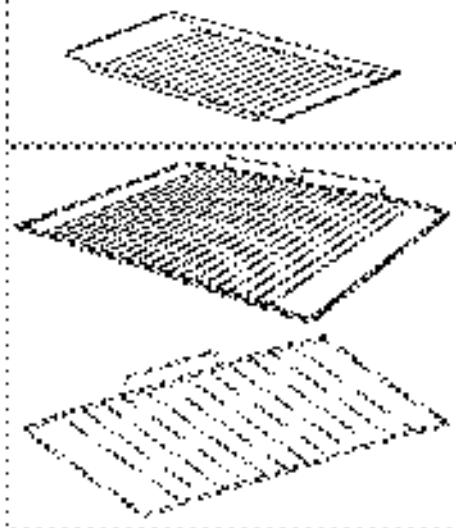

2. Standard tray

Used for pastries, frozen foods and big roasts.

3. Wire grill

Used for roasting and for placing the food to be baked, roasted or cooked in casseroles onto the desired rack.

4. Small wire shelf

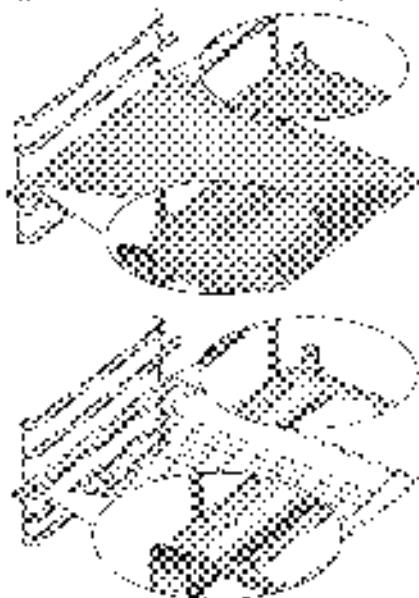

Is placed into the tray (if supplied) in order to collect the dripping from grilling so that the oven stays clean.

d Placing the wire shelf and tray onto the telescopic racks properly
(This feature is optional. It may not exist on your product.)

The telescopic racks allow you to install and remove the trays and wire shelf easily.

When using the tray and wire shelf with telescopic racks, make sure that the one at the rear section of the telescopic box stands against the edges of the wire shelf and tray.

Technical specifications

GENERAL

External dimensions (height / width / depth)	900 mm/600 mm/600 mm
Voltage / frequency	220-240 V 1N~ 50 Hz
Total power consumption	11.4 kW
Fuse	40 A

* Energy information on the energy label of electrical ovens is given in accordance with the EN 50350-1 / II (IEC62370-1) standard. These values are determined under standard load with bottom-hot heater or fan assisted heating (*only functions).

Energy efficiency class is determined in accordance with the following prioritization depending on whether the following functions exist on the product or not: 1. Cooking with convection, 2. Turbo slow cooking, 3. Turbo cooking, 4. Fan assisted bottom-hot heating, 5. Separate bottom heating.

i Technical specification may be changed without prior notice to improve the quality of the product.

i Figures in the manual are schematic and may not exactly match your product.

i Values stated on the product labels or in the documentation accompanying it are obtained in laboratory conditions in accordance with relevant standards. Depending on operational and environmental conditions of the product, these values may vary.

3 Installation

Product must be installed by a qualified person in accordance with the regulations in force. The manufacturer shall not be held responsible for damages arising from procedures carried out by unauthorized persons which may also void the warranty.

- 1 Preparation of location and electrical installation for the product is under customer's responsibility.**

A The product must be installed in accordance with all local electrical regulations.

A Before installation, visually check if the product has any damage on it. If so, do not have it installed.

Damaged products cause risks for your safety.

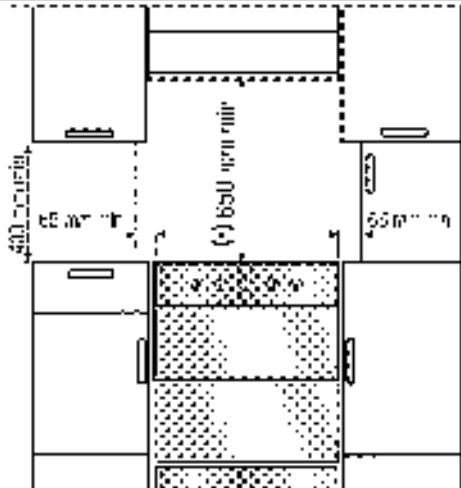

Before Installation

To ensure that critical air gaps are maintained under the appliance, we recommend that the appliance is mounted on a solid base and that the feet do not sink into any carpet or soft flooring.

The kitchen fitter must be able to carry the weight of the appliance plus the additional weight of cookware and cutlery and food. If the range is placed on a base, measures have to be taken to prevent the appliance slipping from the base.

The appliance must not be installed behind a decorative cover in order to avoid overheating.

* Movement of your appliance is most easily achieved by lifting the front as follows and pulling towards. Open the top oven door and the bottom oven door sufficiently to allow a combination grip of the two devices front edge of the oven handle. While gripping, it should be avoided to damage any grill elements or oven interior furniture.

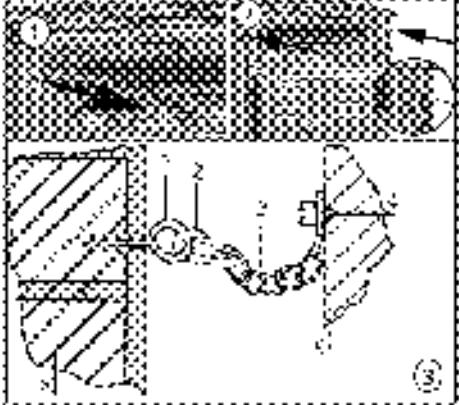

- If the product requires 1 side(s) according to EN 303 standard, e.g. it may be placed with the rear and one side to kitchen walls, kitchen furniture or equipment, of any size. The kitchen furniture or equipment on the other side may only be of the same size or smaller.
- It can be used with cabinets or either side but in order to have a minimum distance of 400 mm above the plane, use a side-side clearance of 50 mm between the appliance and any wall, partition or tall cupboard.
- It can also be used in a free standing position. Allow a minimum distance of 750 mm above the hot surface.
- (*) If a cooker hood is to be installed above the cooker, refer to cooker hood manufacturer's instructions regarding installation height. If no defined any size in the hood manual, the height should be at least 650 mm.
- Any kitchen furniture next to the appliance must be heat-resistant (100 °C min.).

Safety chain

If your product has 2 safety chains; the oven must be secured against overbalancing by using the supplied two safety chains on your oven.

Fix safety hook (1) by using a proper peg to the kitchen wall (3) and connect safety chain (2) to the hook via the locking mechanism (4).

- 1 Safety hook
- 2 Safety chain (supplied are mounted to oven)
- 3 Firmly fix chain to cooker door
- 4 Door of cooker
- 5 Kitchen wall

If your product has 1 safety chain; the appliance must be secured against overturning by using the supplied or a safety chain on your oven.
Follow below steps in the picture to secure the safety chain to your product.

Stability chain to be as short as
permissible to avoid oven tipping
forward are dangerous. Do not over
stretching.

Cooker stability chain for ovens is not
designed with bracket engagement slot.

Installation and connection

Product can only be installed and connected in accordance with the statutory installation rules.

- Do not install the product next to
refrigerators or freezers. The heat
emitted by the product will increase
the energy consumption of cooling
appliances.
- Carry the product with at least two
persons.
- Product must be placed directly on the
floor. It must not be placed onto a case or
a pedestal.
- Do not use the door and/or handle to
carry or move the product. The door,
handle or hinges get damaged.

Electrical connection

Connect the product to a grounded
outlet that is controlled by a miniature circuit
breaker of suitable capacity as stated in the
technical spec. If a fuse is used, have the
grounding line and frame made by a qualified
electrician while using the product with or
without a fuse or former. Our company shall not
be liable for any damages that will arise due
to using the product without a grounding
installer or in accordance with the local
regulations.

- A** The product must be connected to
the main supply only by an
authorised and qualified person. The
product's warranty period starts only
after correct installation.
Manufacturer shall not be held
responsible for damages arising from
incorrect work carried out by
unauthorised persons.

A The power cable must not be jumped, bent or twisted or come into contact with hot parts of the product.

A damaged power cable must be replaced by a qualified electrician. Otherwise, there is risk of electric shock, short circuit or fire!

The main supply data must correspond to the data specified on the type label of the product. The string date is either seen under the door or the lower cover is opened or it is located at the rear wall of the unit depending on the oven type.

Power cables to your product must comply with the values in "Technical specifications" table.

A Before starting any work on the electric installation, disconnect the product from the main supply. There is the risk of electric shock!

Connecting the power cable

If a power cable is not supplied together with your product, a power cable that you would select from the table in accordance with the technical installation of your home must be connected to your product by following the instructions in cable diagram. This product must only be connected by a suitable electrician such as a technician, or from the local electricity company or NICEIC registered contractor to a suitable double pole contact with a minimum contact clearance of 3 mm in all poles. The control unit must be installed in accordance with the IFF regulations. Failure to obey this instruction may cause operational problems and invalidate the product warranty.

This product must only be installed by a qualified electrician or equivalent electricity company or NICEIC registered contractor or to a suitable double pole contact with a minimum contact clearance of 3 mm in all poles and with a minimum rating pluggable double technical data table, Technical specifications, page 15 which is could be fitted adjacent to, but not above, the cooker in accordance with IFF regulations. Failure to observe the instruction may result in

operational problems and invalidate the product warranty.

i Additional protection by a residual current circuit breaker is recommended.

2. The cable must have conductors of sufficiently high cross section area to prevent overheating and deterioration.

The main cable must conform to BS6004.

The appliance must be earthed.

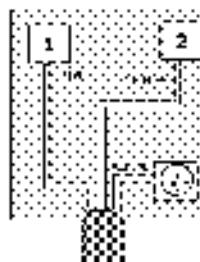

The main cable must pass through the cable clamp.

The main cable should be installed away from the appliance and in particular ventilation ducts, the vent outlets are should not be obstructed when pushed in to position between the supports and the wall and the cables.

3. Open the terminal block cover with a screwdriver.

4. Insert the power cable through the cable clamp below the terminals and secure it to the main body with the integrated screw or cable clamping component.

5. Connect the cables according to the cable diagram.

6. After completing the wire connections, close the terminal block cover.

7. Route the power cable so that it will not contact the credenza and get squeezed between the product and the wall.

i Power cable must not be longer than 2 m because of safety reasons.

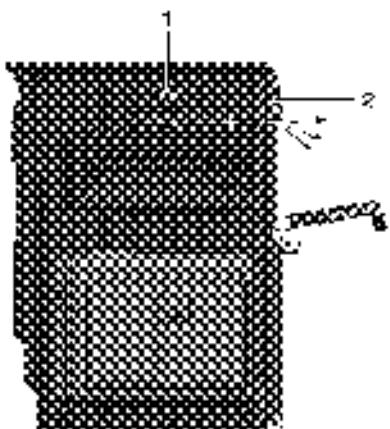

- Fix the product towards the kitchen wall
 - Adjusting the feet of oven
- Wobbly during use may cause cooking surfaces to move. This dangerous situation can be avoided if the product is level and balanced.

For your own safety please ensure the product is level by adjusting the four legs at the bottom by turning left or right and align level with the work top.

Final check

- 1 Disconnect the product to the mains.
- 2 Check electric functions.

For equipment with a cooling fan

1 Fan

2 Control panel

While open door grill etc., in order to protect control panel, knobs and various oven parts, a fan automatically starts working.

Fan continues working until the product cools down.

in bubble wrap or thick cardboard and tape it securely.

- To prevent the wire grid and tray from damaging the oven door during the oven door damaging the oven door, place a strip of cardboard onto the inside of the oven door that lines up with the position of the trays. Tape the oven door to the side walls.
 - Do not use the door or handle to lift or move the product.
- i** Do not place any objects onto the control panel and move it in upright orientation.
- i** Check the general appearance of your product for any damages that might have occurred during transportation.

Future Transportation

- Keep the product's original carton and transport the product in it. Follow the instructions on the carton. If you do not have the original carton, pack the product

4 Preparation

Tips for saving energy

The following information will help you to use your appliance in an economical way, and to save energy:

- Use dark-coloured or enamel-coated cookware in the oven, since the heat transmission will be better.
- When cooking your dishes, perform a preheating operation if it is advised in the user manual or cooking instructions.
- Do not open the door of the oven frequently during cooking.
- Try to cook more than one dish in the oven at the same time whenever possible. You can cook by placing two cooking vessels onto the wire shelf.
- Cook more than one dish on one other another. The oven will already be hot.
- You can save energy by switching off your oven a few minutes before the end of the cooking time. Do not open the oven door.
- Defrost frozen dishes before cooking them.
- Use pans/pots with cover for cooking. If there is no cover, energy consumption may increase 5 times.
- Select the burner which is suitable for the bottom size of the pot to be used. Always select the correct pot size for your dishes. Larger pots need more energy.
- Pay attention to use the bottom pots when cooking with electric hobs.
Pots with thick bottoms will provide a better heat conductor. You can obtain energy savings up to 1/3.
- Vessels and pots must be compatible with the cooking zones. Bottom of the vessels or pots must not be smaller than the hot plate.
- Keep the cooking zones and bottom of the pots clean. Dirt will decrease the heat conduction between the cooking zone and bottom of the pot.
- Information on energy efficiency according to EU 666/2014 can be found on the product leaflet given with the product.

Initial use

Time setting

- i** While making any adjustment, related symbols will flash on the display.

Press **+/-** keys to set the time of the day after the oven is energized for the first time.

- i** For true normal mode, touch **0** first, and then use **+/-** to set the time of the day.

Confirm the setting by touching **0** symbol and wait for 4 seconds without touching any keys to confirm.

- 1 Adjustment key
- 2 Key lock symbol
- 3 Clock symbol
- 4 Alarm - volume symbol^{*}
- 5 Eco mode symbol
- 6 Plus key
- 7 Minus key
- 8 Imitation symbol
- 9 Alarm symbol
- 10 End of Cooking Time symbol^{*}
- 11 Cooking Time symbol
- 12 Program key
* (varies depending on the product model.)

- i** If the initial time is 00:00, clock will start counting from 12:00 and **0** symbol will be displayed. The symbol will disappear once the time is set.

i Corner, sharp edges are not suited to areas of power where it needs to be repositioned.

First cleaning of the appliance

i The surface might get damaged by some detergents or cleaning materials.
Do not use aggressive detergents, cleaning powders/scrubbers or any sharp objects during cleaning.
Do not use harsh abrasive cleaners or sharp metal scrapers to clean the oven door glass since they can scratch the surface, which may result in shattering of the glass.

- 1 Removal of packaging material.
- 2 Wipe the surfaces of the appliance with a damp cloth or sponge and dry with a cloth.

Initial heating

Heat up the product for about 60 minutes and then switch it off. Thus, any production residues or layers will be burnt off and removed.

A Hot surfaces cause burns.
Product may be hot when it is in use. Never touch the hot burners, inner sections of the oven, heating and cold soup of iron away.
Always use heat-resistant oven gloves when putting in or removing dishes in/ from the hot oven.

Electric oven

- 1 Take all baking trays and the wire gril out of the oven.
- 2 Close the oven door.
- 3 Select the highest grill power. See How to operate the electric oven, page 28.
- 4 Operate the oven for about 30 minutes.
- 5 Turn off your oven; See How to operate the electric oven, page 29.

Grill oven

- 1 Take all baking trays and the wire gril out of the oven.
- 2 Close the oven door.
- 3 Select the highest oven power for grill oven. See How to operate the top oven, page 32.
- 4 Operate the grill about 15 minutes.
- 5 Turn off your grill. See How to operate the top oven, page 33.

i Smoke and smell may emit for a couple of hours during the initial operation. This is quite normal.
Ensure that the room is well ventilated to remove the smoke and smell.
Avoid creating smoke and the smell that emits.

5 How to use the hob

General Information about cooking

Never fill the pan with more than one third of ... Do not leave the hob unattended when heating oil. Overheated oil burning risk of fire. Never attempt to extinguish a possible fire with water! When oil catches fire cover it with a fire blanket or damp cloth. Turn off the hob if it is safe to do so and call the fire department.

- Before using tools, always dry them well and gently place into the hot oil. Ensure complete heating of tools - aussie before frying.
- Do not cover the vessel you use when heating oil.
- Place the pan and saucepans in a manner so that their handles are not over the hob to prevent heating of the handles. Do not place unbalanced and easily tilting vessels on the hob.
- Do not place empty vessels and saucepans on cooking zones that are switched on. They might catch fire.
- Operating a cooking zone without a vessel or saucepan on it will cool down up to the product. Turn off the cooking zones after the cooking is complete.
- As the surface of the product can be hot, do not put plastic and aluminum vessels on it. Clean any melted such materials on the surface immediately.
- Such vessels should not be used to keep foods either.
- Use flat bottomed saucepans or vessels only.
- Put appropriate amount of food in saucepans and pans. Thus you will have to make any unnecessary cleaning by preventing the dishes from overcooking. Do not put covers of saucepans or cans on cooking zones.
- Place the saucepans in a manner so that they are centered on the cooking zone.

When you want to move the saucepan or to another cooking zone, turn it up to the cooking zone you want, reflect off's drag ...

Saucepan selection

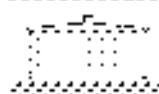

- Glass ceramic surface is heatproof and is not affected by big temperature differences.
- Do not use the glass ceramic surface as a place of storage or as a cutting board.
- Use only the saucepans and pans with machined bottoms. Sharp edges create scratches on the surface.

Spills may damage the glass ceramic surface and cause fire.

Do not use vessels with concave or convex bottoms.

Use only the saucepans and pans with flat bottoms. They ensure easier heat transfer.

For Induction hobs, use only vessels suitable for induction cooking.

Saucepan test

Use following methods to test whether your saucepan is compatible with the induction hob or not.

1. Your saucepan is compatible if its bottom holds a magnet.
2. Your saucepan is compatible if the symbol does not flash when you place your saucepan on a cooking zone. Only ferrimagnetic pots can be used for induction cooking.

Ferromagnetic materials include:

- Iron-coated steel
- Cast iron
- Stainless steel designed for induction cooking

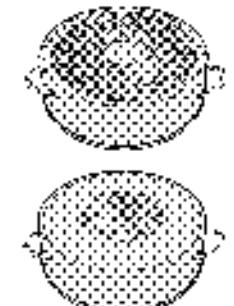

Non-ferromagnetic materials include:

These types of pans will not work with induction cooking.

- Stainless steel
- Glass
- Ceramic
- Copper or aluminium pans

Some saucers have a smaller ferromagnetic area than the rest of the saucer. Only this area will be heated up by the induction zone. Therefore the cooking performance may be reduced. These pan types cannot be detected by bigger induction zones. The diameter of pans' ferromagnetic area should match the size of the cooking zone. If the pan is not detected by the cooking zone, try it on the next smaller cooking zone.

Some vessels have a base which reduces the magnetic materials such as aluminium. These types of vessels cannot be detected by the induction zone.

You can use glass, cast or aluminium saucepans with special magnetic bottom that contains lacquer or varnishing reducing that the saucepan is compatible with induction cooking. Glass and ceramic vessels, pots and the like and other vessels with non-magnetic aluminium bottom should not be used.

Saucepans recognition/focusing system

In induction cooking, only the area covered by the vessel on the relevant cooking zone is energised. The vessel's bottom is recognised by the system and only this area is heated automatically. Cooking stops if the cooking vessel is moved from the cooking zone during cooking. Scrolled cooking zone and  symbol flashes red rapidly.

Safe use

Do not exceed high heating levels when you will use a thin stockpot without a saucer with no lid or with very little oil.

Do not put metal items such as forks, knives or saucepan covers onto your hob since they can get heated.

Never use aluminium foil for cooking. Never place food items wrapped with aluminium foil onto the cooking zone.

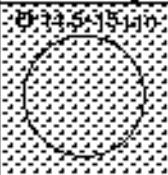

If there is an oven under your hob and it is running, sensors of the hob can decrease the cooking level or turn off the hob.

When the hob is running, keep items with magnetic properties such as credit cards or passes away from the hob.

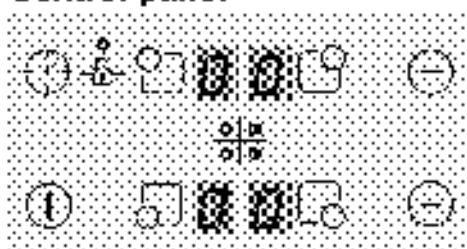

Selecting cooking zone suitable to the vessel

Large cooking zone	Normal cooking zone	Small cooking zone
 Ø 26 cm Ø 24 cm Ø 21 cm	 Ø 10 cm	 Ø 14.5 cm
Large cooking zone <ul style="list-style-type: none"> • Choose the correct pan size for the surface cooking area. The diameter of the pan is twice the diameter of the cooktop's largest surface cooking zone. • Distributes the power quickly. • Provides perfect heat distribution. Used to cook dishes such as lasagna or large fish fillets in very little time. 	Normal cooking zone <ul style="list-style-type: none"> • Choose the correct pan size for the surface cooking area. The diameter of the cooktop's second largest surface cooking zone is twice the diameter of the cooktop's smallest surface cooking zone. • Distributes the power evenly. • Provides perfect heat distribution. Used for individual items. 	Small cooking zone <ul style="list-style-type: none"> • Choose the correct pan size for the surface cooking area. Cook the cooktop's smallest surface cooking zone. • Used for slow cooking, soufflés, creamer. • Used to prepare small portion sizes for frying or sautéing.

Using the hobs

- A** Do not allow objects to drop on the hob. Even small objects such as a ballpoint pen may damage the cooktop. Do not use cracked glass. Water may leak through these cracks and cause short circuit. In case of any kind of damage on the surface (e.g., visible cracks), switch off the product immediately to minimize the risk of electric shock.

i Graphs and figures are for informational purposes only. Actual colors and functions may vary according to the model of your hob.

i This product is controlled with a touch control panel. Each operation you make on your touch control panel will be confirmed by an acoustic signal.

i Always keep the control panel clean and dry. Having damp or soiled surfaces may cause problems in the functions.

Turning on the hob

1. Touch the "①" key on the control panel.
"0" disappears on all cooking zone displays.

i This operation is performed within 20 seconds, the hob will automatically return to Standby mode.

Turning off the hob

1. Touch the "①" key on the control panel.

The hob will turn off and return to Standby mode.

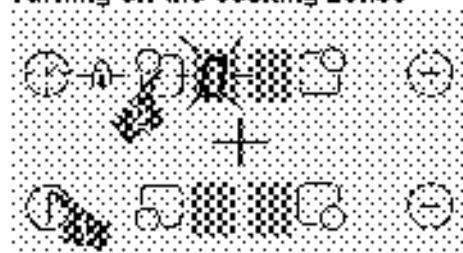

i "H" or "h" symbol that appears on the cooking zone display indicates that the cooking zone is set hot. Do not touch cooking zones.

Residual heat indicator

"H" symbol that appears on the cooking zone display indicates that the hob is still hot and may be used to keep a small amount of food warm. This symbol will soon turn to "h" symbol meaning less hot.

i When power is cut off, residual heat indicator will not light up and does not warn the user about the hot cooking zones.

Turning on the cooking zones

1. Touch "①" key to turn on the hob.
2. Touch the selection key of the cooking zone you want to turn on.
"0" symbol appears on the cooking zone display and the related display illuminates more brightly.

i If the operation is performed within 20 seconds, the hob will automatically return to Standby mode.

Setting the temperature level

i The product might start to cook when it is operating on levels from 1 to 7, especially when cookware with a small diameter and when water/oil is left. This is not a fault.

Touch "⊖" or "⊕" keys to set the temperature level between "1" and "9" or "9" and "1".

- i** The outer section of the 280 mm induction hob cooking zone (if your product is equipped with a 280 mm induction hob cooking zone) is activated only when a suitable cookware large enough to cover the cooking zone is placed on the cooking zone and the temperature is set to a level higher than 0.

Turning off the cooking zones:

A cooking zone can be turned off in 3 different ways:

1. By dropping the temperature level to "0"

You can turn the cooking zone off by dropping the temperature adjustment to "0" level.

2. By touching the relevant cooking zone symbol "" for a certain time Turn off the cooking zone by pressing relevant symbol "" for a certain time to drop temperature level to "0".

3. By using the turn-off on the timer option for the desired cooking zone When the time is over, the timer will turn off the cooking zone assigned to it. "0" or "00" will appear on related display.

When the time is over, an audible alarm will sound. Touch any key on the control panel to silence the audible alarm.

High Power (Booster)

(This feature is optional. It may not exist on your product.)

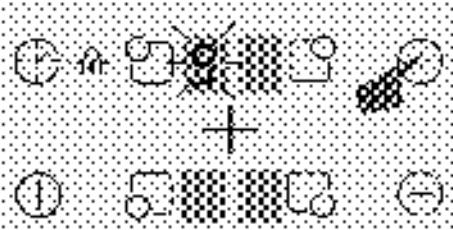

For fast heating, you can use booster function "P". However, this function is not recommended for cooking a long time. Booster function may not be available in all cooking zones.

Turning on High Power (Booster):

1. Touch "" key to turn on the hob

2. Select the desired cooking zone by touching the cooking zone selection keys.

3. Touch "" or "" key briefly to reach the level "9".

4. When the cooking zone is at level "9", touch "" key once to set cooking zone temperature to "P".

Turning off High Power (Booster):

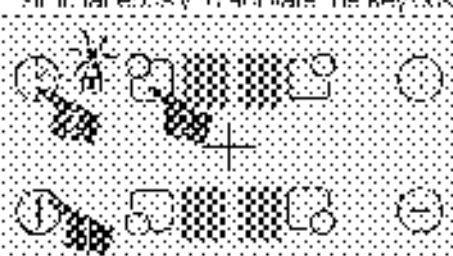

- To disable the Booster function, touch "" and set the temperature to level "9". Cooking zone goes out of booster and comes back to operating level "9".
- You can decrease the temperature level by touching "" or you can switch off the cooking zone completely by decreasing the temperature level to "0".

Keylock

You can activate the keylock to avoid changing the functions by mistake when the hob is operating.

Activating the keylock

1. Touch "" key to turn on the hob.
2. Touch "" and "" keys simultaneously to activate the keylock.

» Keylock will be activated and the dot on the symbol "L" will light up.

- i** When you turn the hob on when the keys are locked, the keylock will be released next time you turn the hob on again. Key lock must be deactivated in order to be able to operate the hob.

Deactivating the keylock

- When the keylock is active, touch "①" and "②" keys simultaneously.
» Keylock will be deactivated and the dot on the symbol "L" will disappear.

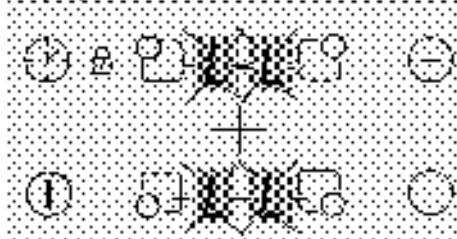

Childlock (This feature is optional. It may not exist on your product.)

You can protect the hob against being operated un-intentionally in order to prevent children from turning on the cooking zone. Child Lock can only be activated and deactivated in Standby mode.

- i** Child lock will be cancelled in case of power failure.

Activating the childlock (This feature is optional. It may not exist on your product)

- Touch "①" key to turn on the hob.
- Touch "②" and "③" keys simultaneously After "beep" signal touch "④" to activate the childlock.
» Childlock will be activated and "L" symbol appears on all cooking zone display.

Deactivating the childlock (This feature is optional. It may not exist on your product.)

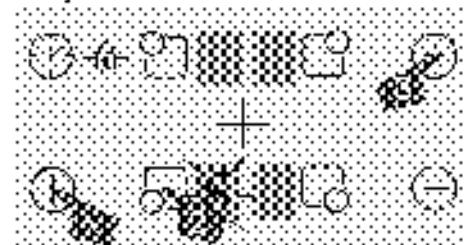

- When the keylock is active, touch "①" key to turn on the hob.
- Touch "②" and "③" keys simultaneously, after "beep" signal touch "④" to deactivate the childlock.
» Childlock will be deactivated and "L" symbol disappears on all cooking zone display.

Timer function

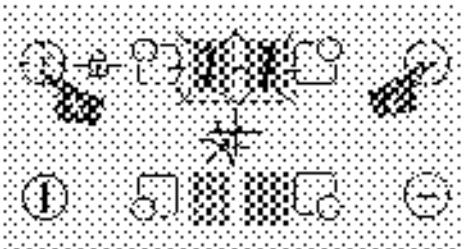

The function facilitates cooking for you, it will not be necessary to attend the oven for the whole cooking period. Cooking zone will be turned off automatically at the end of the time you have selected.

Activating the timer

- Touch "①" key to turn on the hob.
- Select the desired cooking zone by touching the cooking zone selection keys.

- Touch "⑤" or "⑥" keys to set the desired temperature level.
- Touch "⑦" key to turn the timer on.
» "00" symbol will appear on timer display and decimal point will appear on the selected cooking zone display.

- i** Right rear and left rear cooking zone displays show as timer is away when the timer is active.
5. Touch "↑" or "↓" keys to set the desired time.
- i** The timer can only be set for the cooking zones already in use.
- i** Repeat the above procedure for the other cooking zones for which you wish to set the timer.
- i** Timer cannot be adjusted unless the cooking zone and the temperature value for the cooking zone are selected.
- i** When the cooking zone for which a timer was set is selected, you can end the remaining time by touching the "↑" key again.

Deactivating the timer

Once the set time is over, the hob will automatically turn off and give an audible warning.

Press any key to silence the audio warning.

Turning off the timers earlier

If you turn off the timer earlier, the hob will carry on operating at the set temperature until it is turned off.

1. Select the cooking zone you want to turn off.
2. Touch "②" key to turn the timer on.
3. Until "00" appears on the timer screen, touch "②" to set the value to "00".

Dot-shaped light on the relevant cooking zone display turns off completely after having been on for a certain period of time and the timer is cancelled.

Using induction cooking zones safely and efficiently

Operating principles: Induction hobs heat directly the cooking vessel as a result of its operating principle. Therefore, it has various advantages when compared to other hob types. It operates more efficiently and the hob surface does not heat up.

Induction hob is equipped with superior safety system so that will provide you maximum usage safety.

- i** Your hob can be equipped with induction cooking zones with a diameter of 145, 180, 210 280 mm depending on the model. With induction feature each cooking zone selects each vessel based on them. Energy builds up only where the vessel contacts with the cooking zone and thus, minimum energy consumption is achievable.

Operation time constraints

The hob control is equipped with a operation time limit. When one or more cooking zones are left on, the cooking zone will automatically be deactivated after a certain period of time (see Table 1). If there is a timer assigned to the cooking zone, the timer display will also turn off later.

Operation time limit depends on the selected temperature level. Maximum operation time is connected to this temperature level.

The cooking zone may be restarted by the user after it is turned off automatically as described above.

Table-1: Operation time limits

Temperature level	Operation time limit
0	0
1	6
2	6
3	5
4	5
5	4
6	1,5
7	1,5
8	1,5
9	20-30 min.
P (Booster)	5-10 min. (M)
(*) The hob will drop to level 0 after 5 minutes.	

Overheating protection

Your hob is equipped with some sensors enabling protection against overheating. Following may be observed in case of overheating:

- Active cooking zone may be turned off.
- Selected level may drop. However, the control cannot be seen on the indicator.

Overflow safety system

Your hob is equipped with overflow safety system. If there is any overflow (like spillage) on the control panel, system will cut the power connection immediately and turn off your hob. "P" warning appears on display during this process.

Precise power setting

Induction hob reacts the commands immediately as a result of its operating principles, it changes the power settings very fast. Thus, you can prevent a cooking coil (containing water, milk and etc.) from overflowing even if it was just about to overflow.

Noises

User may hear noises while cooking

During using the hob there may be some noise depending on the basic material of the coils. These noises are normal part of induction technology. It is not a defect.

Possible noise causes and types:

Fan noise

The hob has a fan which activates automatically according to temperature of the product. Fan has different driving levels and according the temperature it activates a certain cycle.

Low buzzing noise like transformer operation

This is a nature of the induction technology. Since heat is directly transferred to cookware base, there may be such buzzing noise depending on the material of the cookware. Therefore user can hear different noises with different cookware.

Creaking

There may be creaking noises while cooking. This is because of the material and construction of the cookware base. Cookware is made of different layers with different materials, cracking noise may occur.

Whistling noises

There may be whistling noises while cooking two hot zones on same side of the hob with different cooking levels.

Empty pot

Noise can be heard if an empty pot is heated. When you put water or food in it, this sound will go away.

i If the surface of the touch control panel is exposed to intense vapor, the control system may become dead-volted and give error signal.

i Keep the surface of the touch control panel clean. Unnecesssary operation may be observed.

6 How to operate the oven

General Information on baking, roasting and grilling

- A** Hot surfaces cause burns.
Product may be hot when it is in use. Never touch the hot burners, inner sections of the oven, heaters and etc. Keep children away.
Always use heat resistant oven gloves when putting in or removing dishes from the hot oven.

- A** To prevent steam from escaping - strong steam can scald your hands, face and fingers.

Tips for baking

- Use non-stick coated appropriate materials or aluminium foil, paper or heat resistant silicone moulds.
- Make best use of the space on the rack.
- Place the baking mould in the middle of the shelf.
- Select the correct rack position before turning the oven on/grill on. Do not change the rack position when the oven is hot.
- Keep the oven door closed.

Tips for roasting

- Roasting whole chicken, turkey and large pieces of meat with dressings such as bacon, lardons and black pepper reduces cooking time and increase the cooking performance.
- It takes about 16 to 30 minutes longer to roast meat with bones when compared to roasting the same size of meat without bones.
- Each centimeter of meat thickness reduces approximately 4 to 5 minutes of cooking time.
- Let meat rest in the oven for about 10 minutes after the cooking time is over. The juice is better distributed over the roast and does not run out when the meat is cut.
- Fish should be placed on the middle or lower rack in a heat resistant plate.

Tips for baking

- Select the correct shelf position before turning the oven on - shelf positions are counted from the bottom upwards.
- Always preheat the oven first to ensure the food is at the correct temperature as soon as it goes into the oven.
- Use good quality baking tins such as non stick or aluminium. Line tins with greaseproof or baking paper to prevent sticking if necessary.
- Do not bake tin more than half full.
- If baking one tray of food or cake, place centrally on the shelf level and centrally in the oven.
- Do not open the oven door too much during cooking.
- To check if a cake is cooked, insert a skewer or cocktail stick into the centre. If it comes out clean, the cake is done. If it has food stuck to it, continue to cook the cake for a few minutes more and repeat the process.

Tips for roasting

Preheat oven first.

- For poultry, take meat or poultry out of the refrigerator 30 minutes before cooking.
- Weight meat, return cold as how long it will take to cook.
- Before cooking meat or poultry, lightly coat with butter or oil and season with salt, pepper, herbs or other seasoning. Place in a roasting pan and use a rack to lift the meat out of its juices. Place dish in centre of oven.
- Turn meat over halfway through cooking.
- If the roasted meat is covered with foil, it helps to keep the oven warm, always uncover for the last half an hour of cooking to allow browning.
- Remove meat from oven once cooked and stand covered in foil for 10-15 minutes to allow the meat to relax and juices to be reabsorbed which ensures the roast is tender and moist.

How to operate the electric oven

Product

Product is equipped with two ovens. Overview section indicates the relevant keys for each oven.

How to operate the main oven / Easy Steam Cleaning

Select temperature and operating mode

1 Set the Function knob to the desired temperature.

→ Oven heats up to the adjusted temperature and maintains it. During heating, temperature lamp stays on.

No function must be selected before closing door to go into

Switching off the electric oven

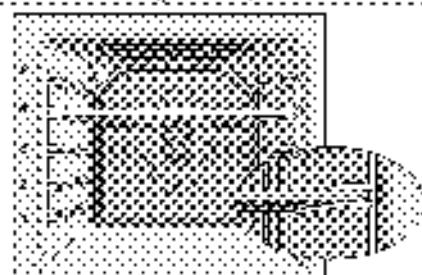

Turn the Function knob to OFF (loc) position.

Rack positions (For models with wire shelf)

It is important to place the wire shelf onto the side racks correctly. Wire shelf must be inserted between the side racks as illustrated in the figure.

Do not let the wire shelf stand against the rear wall of the oven. Slide your wire shelf to the front center of the rack and settle it with the help of the door handle in order to obtain a good grill performance.

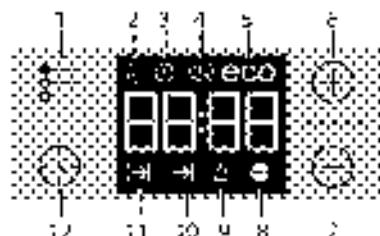

(More information on the product model: ...)

Using the oven clock

The oven clock only controls the convection oven. It has no effect for the low oven.

1 Adjustment key

2 Key lock symbol

3 Clock symbol

4 Alarm volume symbol *

5 Fan mode symbol

6 Plus key

7 Minus key

8 Information symbol

9 Alarm symbol

10 End of Cooking Time symbol *

11 Cooking Time symbol

12 Program key

* More information on the product model: ...

1 Maximum time that can be set for end of cooking is 3 hours 59 minutes. Program will be canceled in case of power failure. You must reprogram the oven.

2 While making any setting, related symbols will flash on the display. You must wait for a short time for the settings to take effect.

3 If no cooking setting is made, time of the day cannot be set.

4 Remaining time will be displayed if cooking time is set, when the cooking starts.

Cooking by setting the cooking time:

You can set the oven so that it will stop at the end of the specified time by setting the cooking time on the timer.

1 Select the function for cooking.

- Touch \odot until \rightarrow symbol appears on a display for cooking time.
- Set the cooking time with $+/-$ keys.
- After the cooking time is set, \rightarrow symbol and the line \square will appear on a display continuously.
- Place the dish into the oven and set the temperature with temperature knob. Cooking will start.
- Cooking time starts to count down on a display when cooking starts and all parts of time-slash symbol (\rightarrow) in the set cooking time is divided into 4 equal parts and when the time of each part ends, the symbol of that part turns off. So you can understand the ratio of remaining cooking time to total cooking time easily.

Setting the end of cooking time to a later time; (This feature is optional. It may not exist on your product.)
After setting the cooking time on the timer, you can set the end of cooking time to a later time.

- Solve the timer for cooking.
- Touch \odot until \rightarrow symbol appears on a display for cooking time.
- Set the cooking time with $+/-$ keys.
- Once the Cooking time is set, \rightarrow symbol will appear on display continuously.
- Touch \odot until \rightarrow symbol appears on a display for the end of cooking time.
- Press $+/-$ keys to set the end of cooking time.
- After the cooking time is set, \rightarrow symbol plus \rightarrow symbol and the time \square will appear on a display continuously. Once the cooking starts, \rightarrow symbol disappears.
- Place the dish into the oven and set the temperature with temperature knob. Cooking will start.
- Oven timer calculates the startup time by deducting the cooking time from the end of cooking time you have set. Solve the operating mode is activated when the startup time of cooking has come and the oven is heated up to the set temperature. It's similar to the convection until the end of cooking time.
- Cooking time starts to count down on a display when cooking starts and all parts of

time-slash symbol is 1. The set cooking time is divided into 4 equal parts and when the line of each part ends, the symbol of that part turns off. So you can understand the ratio of remaining cooking time to total cooking time easily.

- After the cooking process is completed "End" appears on the displayed and the timer gives an audio warning.

i If you press any key at the end of the audio warning, the oven will start heating. Turn the temperature knob and function knob to "0" after pressing to switch off the oven in order to prevent re-operation of the oven at the end of warning.

Activating the keylock

You can prevent digging all timer from being intervened with by activating the key lock function.

- Touch \odot until \square symbol appears on display.
- "OFF" will appear on the display.
- Press \oplus to activate the key lock.
- Once the key lock is activated, "On" appears on the display and the \square symbol remains.

i Digital timer keys are not functional when the key lock is activated. Key lock will not be canceled in case of power failure.

To deactivate the keylock

- Touch \odot until \square symbol appears on display.
- "On" will appear on the display.
- Deactivate the key lock by pressing the $=$ key.
- "OFF" will be displayed once the key lock is deactivated.

Setting the alarm clock

You can set the time of the product or any warning or reminder apart from the cooking program.

The alarm clock has no influence on the functions of the oven. It is only used as a warning. For example, this is useful when you want to turn food in the oven at a certain point of time. There will give an audio warning at the end of the set time.

- 1 Touch until symbol appears on a display.
 - i** Maximum alarm time can be 22 hours and 39 minutes.
 - 2 Set the cooktime by using / keys.
 - i** Function keys for alarm tone, time of day, display brightness and temperature keys should be at position.
 - * symbol will remain lit and the alarm time will appear on the display until the alarm time is set.
 - 3 At the end of the alarm time, symbol starts flashing and the audio warning is heard.
- Turning off the alarm**
- 1 While a warning sounds for 2 minutes, to stop the audio warning, just press any key.
 - 2 Audio warning will be stopped and current time will be displayed.
- Cancelling the alarm:**
- 1 Touch until symbol appears on a display in order to cancel the alarm.
 - 2 Press and hold until "00:00" is displayed.
 - i** Alarm time will be displayed. (The cooktime and cooking time are set, consequently choices time will be displayed.)
- Changing alarm tone**
- 1 Touch until symbol appears on a display.
 - 2 Adjust the desired alarm tone with / .
 - 3 The tone you have selected will be saved in a short time.
 - * Selected alarm tone will appear as "b-01", "b-02" or "b-03" on the display.

Changing the time of the day

To change the time of the day you have previously set.

- 1 Touch until symbol appears on a display.
- 2 Set the time of the day with / .
- 3 The time you have set will be activated in a short time.

Economy mode

You can save energy with economy mode while cooking by setting cooking time in the oven.

This mode compares the cooking with the inner temperature of the oven by switching off the heating before the end of cooking time.

Setting the economy mode

- 1 Touch until symbol appears on a display.
- * "OFF" will appear on the display.
- 2 Enable economy mode by touching .
- * Once the economy mode is activated, "On" appears on the display and the eco symbol remains it.

Disabling economy mode

- 1 Touch until symbol appears on a display.
- * "On" will appear on the display.
- 2 Disable economy mode by touching .
- * "Off" will be displayed once the eco mode is deactivated.

Setting the screen brightness

(This feature is optional. It may not exist on your product.)

- 1 Touch d-01 and d-02 or d-03 appears on display for display brightness.
- 2 Set the desired brightness with / .
- * The time you have set will be activated in a short time.

Cooking times table

i The timings in this chart are meant as a guide. Timings may vary due to temperature of bread, thickness, type and your own preference of cooking.

Baking and roasting

i The back of the oven is the bottom rank.

Tips for baking cake

- If the cake is too dry, increase the temperature by 10°C and decrease the cooking time.
 - If the cake is wet, use less liquid or lower the temperature by 10°C.
 - If the cake is too dark on top, place it on a lower rack, lower the temperature and increase the cooking time.
 - If cooked well on the inside but sticky or the outside is too hard, lower the temperature and increase the cooking time.

Tips for baking pastry

- If the pastry is too dry, increase the temperature by 10°C and decrease the cooking time. Dampen the edges of dough with a solution composed of milk, oil, egg and yoghurt.
 - If the pastry takes too long to bake, pay care that the thickness of the pastry you have prepared does not exceed the desired thickness.

- If the upper side of the pastry gets browned, but the lower part is not cooked, make sure that the amount of sauce you have used for the pastry is not too much at the bottom of the pastry. Try to scatter the sauce evenly between the dough layers and/or the top of pastry for an even browning.

i Cook the pastry in accordance with the method and temperature given in the cooking table. If the bottom part is still not browned enough, place it on the oven shelf 10–15 sec. later.

Tips for cooking vegetables

- If the vegetable dish turns out of juice and gets too dry, cook it in a pan with a lid instead of a tray. Glass vessels will preserve the juice of the dish.
 - If a vegetable dish does not get cooked, boil the vegetables separately or cook them like canned food and put in the oven.

How to operate the top oven

The grill oven can be used as a grill or as baking oven. The oven door operates a door switch switching between grill and oven operation.

Turning on the oven

Oven is operated with Function knob. Oven is turned off, when the Function knob is in OT (oven) position.

1 Close the oven door.

2 Set the oven temperature.

» Temperature light will turn off when the set temperature is attained.

Cooking times table

i The timings in this chart are meant as a guide. Timings may vary due to temperature of food, the oven's type and your own preference of cooking.

i Maximum load capacity of oven tray: 4 kg (8.8 lb).

i Top rack of the oven is the bottom rack.

* Do not place ovenware with rough edges on the oven door.

* Ensure that there is at least 20mm space at top of oven when cooking larger loads or using larger cookware.

Baking and roasting

i Top rack of the oven is the bottom rack.

Turning off the grill oven

1 Turn the Function knob to OT (top) position.

Select temperature and operating mode

1 Set the Function knob to the desired temperature.

» Oven heats up to the adjusted temperature and maintains it. During heating and cooling functions, light turns on.

Switching off the electric oven

Turn the Function knob to OT (top) position.

i While cooking is in progress, when the electricity is cut and comes back again, the top oven continues to operate. In case of any power failure, make sure to turn off the oven.

Temperature	Function	Preheat time	Roast time	Bake time
150	OT (top)	~10 min	~10 min	~10 min
180	OT (top)	~10 min	~10 min	~10 min
210	OT (top)	~10 min	~10 min	~10 min
240	OT (top)	~10 min	~10 min	~10 min
270	OT (top)	~10 min	~10 min	~10 min
300	OT (top)	~10 min	~10 min	~10 min
330	OT (top)	~10 min	~10 min	~10 min
360	OT (top)	~10 min	~10 min	~10 min
390	OT (top)	~10 min	~10 min	~10 min
420	OT (top)	~10 min	~10 min	~10 min
450	OT (top)	~10 min	~10 min	~10 min
480	OT (top)	~10 min	~10 min	~10 min
510	OT (top)	~10 min	~10 min	~10 min
540	OT (top)	~10 min	~10 min	~10 min
570	OT (top)	~10 min	~10 min	~10 min
600	OT (top)	~10 min	~10 min	~10 min

How to operate the top grill

A Hot surfaces may cause burns! Keep children away from the product. Oven door contains a glass for inc. what opened hot and thus possible splashes to the user.

A **WARNING:** This product is designed for OPEN DOOR GRILLING.

The grill oven can be used as a Toaster or baking oven. The oven door operates a switch between grilling and oven operation.

There is a switch on the door. As a safety precaution, this switch prevents operation of the grill after the door is CLOSED.

- 1 Open grill / oven door.
- 2 Set grill fan temperature to +50°C and preheat for around 5 minutes if necessary.
- 3 Then set desired grill temperature.
- 4 Temperature light is on.

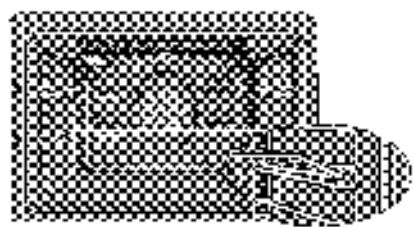

i Do not attempt to turn the fan motor knobs, otherwise it will go to the ON (upper) position.

Switching off the grill

1 Turn the Grill control knob clockwise (outwards) to Off (upper) position.

i While cooking is in progress, when the electricity is cut and comes back again, the top oven continues to operate on account of the power failure, unless you turn off the grill.

- For big or medium sized portions in correct rack position under the grill heating ring.
- For food only whose top is required to be roasted, grill the food either by placing onto the wire grill in the tray or by placing the tray onto the floor of grill compartment.
- Food and plates placed onto the floor of grill compartment will get burned when the main oven is in use. Do not switch on the grill compartment when using it for storing food.

A Foods that are not suitable for grilling carry the risk of fire. Only grill food which is suitable for intensive grilling heat.

Do not place the food too far in the back of the grill. This is the coldest area and fatty food may catch fire.

i While cooking is in progress, when the electricity is cut and comes back again, the top oven continues to operate. In case of any power failure, sum to turn off the oven.

Top oven cooking times table for grilling

Grilling with electric grill

i 1st rack of the oven is the bottom rack.

Food	Preheating time	Preheating temperature	Grilling time per side
Steak	2'	200°C	2.5-3 min.
Steak dinner	2'	200°C	2.5-3 min.
Cold cuts	2-3'	200°C	2.5-3 min.
Ham roll	2'	200°C	2.5-3 min.
Sea bass	2'	200°C	2.5-3 min.
Scallopini	2'	200°C	1.5 min.

Depending on thickness

Time might be varying

7 Maintenance and care

General Information

Service life of the product will extend and the possibility of problems will decrease if the product is cleaned at regular intervals.

A Disconnect the product from mains supply before starting maintenance or cleaning work.
There is the risk of electric shock!

A Allow the product to cool down before you clean it.
Hot surfaces may cause burns!

- Clean the product thoroughly after each use. In this way it will be possible to remove cooking residues more easily thus avoiding these from burning the next time the appliance is used.
- Never clean the product with abrasive agents or cleaning agents containing acids or chlorine to clean the stainless steel surfaces and the handle. Use a soft cloth with liquid detergent (not abrasive) to wipe the parts clean, paying attention to sweep in one direction.

i The surfaces might get damaged by some detergents or cleaning materials.
Do not use aggressive detergents, cleaning powders, abrasives or any sharp objects during cleaning.
Do not use metal brushes, canisters or sharp metal scrapers to clean the oven door glass since they can scratch the surface, which may result in shattering of the glass.

i Do not use steam cleaners to clean the appliance as this may cause an electric shock.

Cleaning the hob

Glass ceramic surface

Wipe the glass ceramic surface to remove oil with cold water, paying attention to avoid no residual cleaning agents and the wash cloth, clothing. Residues may cause damage on the glass ceramic surface when using the hob for the next time.

Dried residue on the glass ceramic surface (hydrocarbons) should under no circumstances be cleaned with hook blades, steel wool or similar tools.

Remove calcium stains (yellow stains) with commercially available lime remover or a small amount of lime remover such as vinegar or lemon juice.

If the surface is heavily soiled, apply the cleaning agent on a sponge and wait until it is absorbed well. Then, clean the surface of the hob with a damp cloth.

i Sugar based foods such as thick cream and gravy must be cleaned promptly without waiting the surface to cool down. Otherwise, glass ceramic surface may get damaged permanently.

Slight color fading may occur on coatings or other surfaces in time. It does not affect the operation of the product.

Color fading and stains on the glass ceramic surface is a normal condition and not a defect.

Cleaning the control panel

Clean the control panel and knobs with a damp cloth and wipe them dry.

i If your product is equipped with cutters/knives do not remove the control button/knobs to clean the control panel.

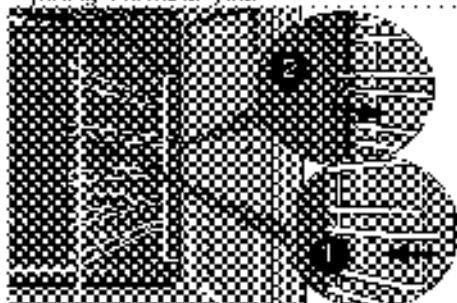

Control panel may get damaged all

Cleaning the oven

To clean the side wall (Varies depending on the product model.)

(This feature is optional. It may not exist on your product.)

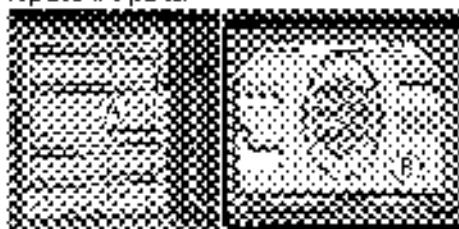

- 1 Remove the front section of the side rack by pulling it in the opposite direction of the side wall.
- 2 Remove the side rack completely by pulling it towards you.

Catalytic walls

(This feature is optional. It may not exist on your product.)

The inner side walls (A) and/or the rear wall (B) of your product may be coated with catalytic enamel. Catalytic walls have a light matte colour and a porous surface. Catalytic walls of the oven should not be cleaned. Thanks to their cellular structure, catalytic surfaces absorb grease and make the surfaces shiny. If this case, it is recommended to replace the parts.

Easy Steam Cleaning

It ensures easy cleaning because the dirt, having waited not for too long, is softened with the steam that forms inside the oven and the water droplets condensing on the inner surface of the oven.

- 1 Remove all accessories inside the oven.

- 2 Pour 500 ml of water into the oven tray and place the tray at the 2nd rack of the oven.

- 3 Set the oven to easy steam cleaning mode and run at 100 °C for 25 minutes.
- 4 Open the door and wipe the inner surfaces of the oven with a damp sponge or cloth.
- 5 Use warm water with washing liquid, a soft cloth or sponge to clean the porcelain dr. and wipe it with a dry cloth.

i During the easy steam cleaning mode, water that's placed in the tray to soften tightly formed residue buildup within the oven cavity will evaporate and condense in the oven cavity and inner glass of the oven door, therefore water may drip when the oven door is opened. Wipe away the condensation as soon as the oven door is opened.

Clean oven door

To clean the oven door, use warm water with washing liquid, a soft cloth or sponge to clean the product and wipe it with a dry cloth. Wipe the glass with vinegar and then rinse it against lime residues that may occur on the oven glass.

i Don't use any harsh abrasive cleaners or sharp metal scrapers to clean the oven door. They could scratch the surface and destroy the glass.

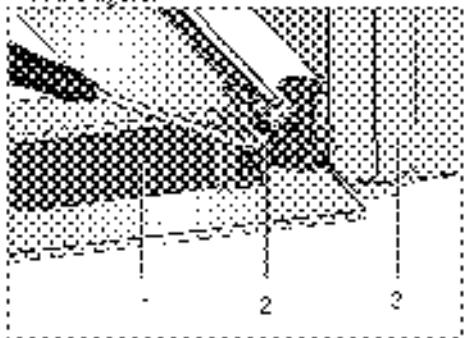

Cleaning the oven door

- i** Do not use harsh abrasive cleaners, metal scrapers, wire wool or broken materials to clean the oven door and glass.

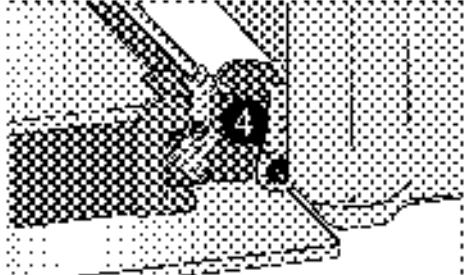

You can remove your oven door and door glasses to clean them. How to remove the doors and windows is explained in the sections 'Removing the oven door' and 'Removing the inner glasses of the door'. After removing the door inner glasses, clean them using a dishwashing detergent, warm water and a soft cloth or sponge and dry them with a dry cloth. Wipe the glass with vinegar and then rinse it against the residue that may occur on the oven glass.

Removing the oven door

- 1 Open the front door (1).
- 2 Open the clips at the hinge housing (2) on the right and the left side of the front door by pressing them down as illustrated in the figure.

- 1 Door
- 2 Hinge lock/bottom position
- 3 Door
- 4 Hinge lock/upper position

- 6 Move the front door to the side.

- 4 Remove the front door by pulling upwards to release it from the right and left hinges.

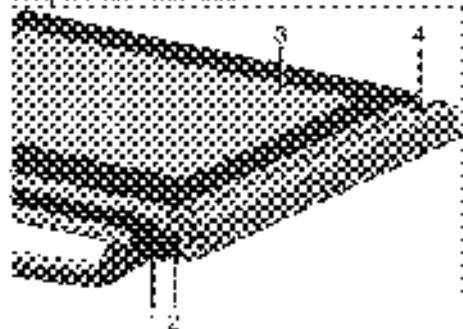

- i** Steps carried out during removing process should be performed in reverse order to install the door. Do not forget to close the clips at the hinge housing when installing the door.

Removing the door inner glass

(This feature is optional. It may not exist on your product.)

The inner glass panel of the oven door at upper oven can be removed for cleaning.

- 1 Open the oven door

- 1 Screw
 - 2 Profile
 - 3 Inner glass pane
 - 4 Flange bolt
 - 5 Door frame
- 2 Take out the screw(1) with a screwdriver
 - 3 Take out the profile (2); then hook up to inner glass (3).
 - 4 Then group the door again, put the glass pane (3) to the plastic sets (4) and group the door.

Replacing the oven lamp

A Before replacing the oven lamp, make sure that the product is disconnected from the mains power circuit in order to avoid the risk of an electric shock. Hot surfaces may cause burns!

i In the oven, an incandescent lamp with a power of use less than 40 W, a tungsten bulb less than 80 W or a combination of two item 30 mm of a halogen lamp with socket type G9, a power of less than 60 W is used. The lamps are suitable to operate at temperatures above 200 °C. Oven lamp can be obtained from Authorised Service Agents or technician with Licence. The product contains a lamp of energy class G.

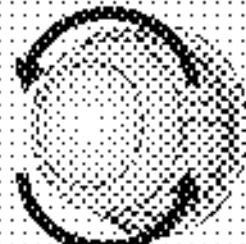

i The oven lamp might vary from the figure.

i The lamp used in this appliance is not suitable for household room illumination. The intended purpose of this lamp is to assist the user to see foodstuff.

i The lamps used in this appliance have to withstand extreme physical conditions such as temperatures above 50 °C.

If your oven is equipped with a round lamp:

1. Disconnect the product from mains.
2. Turn the glass cover counter clockwise to remove it.

3. If your oven lamp is of type (A) shown in the figure below, remove it by rotating as shown and replace it with a type (B), pull and remove it as shown in the figure and replace it.

4. Install the glass cover.
