How To Use

1. Remove keycap

Use the keycap puller tool to clamp on a keycap and pull upwards to detach keycap from switch. Sometimes the switch may come out as well if the keycap is secured tightly on switch, which is normal. For longer keys such as the space bar, always clamp and remove from the MIDDLE of the keycap.

2. Remove Switch

Use the puller to push in the two tabs located on the top and bottom side of the switch. Once they are pushed in, pull upwards to remove switch from keyboard case.

Warning : It is very easy to scratch your keyboard case with this tool, so take caution when removing switches!

3. Insert Switch

When inserting a new switch, align switch to holes on the keyboard, and insert straight down. There should be minimal resistance and the switch should pop into the frame of the keyboard. It is recommended at this time to have a notepad ready on your PC, open it and make sure the switch works when you press it. If the switch does not light up, or the key doesn't show up on your PC when you press it, then the switch was not inserted properly. Remove switch, and make sure pins are straight then insert again.

Note : It is safe to swap switches while your keyboard is plugged in to your PC.

4. Insert keycap

Once you have confirmed the switch was properly inserted, snap back in the appropriate keycap.

Cara penggunaan

1. Melepas keycap

Gunakan alat penarik keycap untuk menjepit keycap dan menariknya ke atas untuk melepaskan keycap dari switch. Terkadang switch mungkin keluar juga jika keycap terpasang erat switchnya terpasang erat, dan ini normal. Untuk kunci yang lebih panjang seperti itu sebagai spasi, selalu jepit dan lepaskan dari bagian TENGAH keycap.

2. Melepas Switch

Gunakan penarik untuk mendorong kedua tab yang terletak di atas dan sisi bawah Switch. Begitu mereka dimasukkan, tarik ke atas untuk melepaskan switch dari kotak keyboard.

Peringatan : Sangat mudah untuk menggores casing keyboard anda dengan alat ini, jadi berhati-hatilah saat melepas switch!

3. Masukkan Switch

Saat memasukkan switch baru, sejajarkan switch ke lubang pada keyboard, dan masukkan lurus ke bawah. Resistansinya harus minimal dan switchnya harus masuk ke dalam bingkai keyboard. Saat ini disarankan untuk menyiapkan notepad di PC anda, buka dan pastikan switch berfungsi saat anda menekannya. Jika switch tidak menyala, atau tombol tidak muncul di PC saat Anda menekannya, maka switch tersebut tidak dimasukkan dengan benar. Lepas switch, dan pastikan pin lurus, lalu masukkan kembali.

Catatan : Aman untuk menukar switch saat keyboard anda terhubung ke PC anda.

4. Masukkan keycap

Setelah anda memastikan bahwa switch telah dimasukkan dengan benar, pasang kembali keycap pada posisi yang sesuai.
