

# TM9000

MOBILE RADIOS  
BROADBAND | DMR | P25 | ANALOG

Exceptional audio and connectivity options.  
Built Tait Tough for critical communications.

**TAIT  
TOUGH**  
The Toughest Radios in the Industry

AUGUST 2025 VERSION 3

## Preface

### PLEASE READ BEFORE USING THIS PRODUCT CATALOG.

#### **COPYRIGHT:**

All information in this document is the property of Tait International Limited. All rights are reserved. This document may not, in whole or in part, be copied, photocopied, reproduced, translated, stored or reduced to any electronic medium or machine readable form without the prior written permission of Tait International Limited.

#### **SCOPE:**

This catalog describes the TM9000 series mobile radios, options and accessories.

Custom product and non-standard equipment is not listed. Please contact your Tait representative if you require information on any product not listed within this book.

#### **PRODUCT STATUS:**

Every care has been taken to assure that the products meet the respective regulatory requirements. However, Tait does not warrant that all products meet specific country requirements.

If you have any questions regarding product suitability please contact your Tait representative.

#### **TERMS AND CONDITIONS OF SALE:**

All sales and quotations for Tait products and services are subject to the current version of the Tait Standard Terms and Conditions for Supply. For a copy of the Terms and Conditions please contact your Tait representative.

#### **CONFIDENTIALITY:**

This product catalog contains information which is confidential and is solely for the use of the intended recipient. If you are not the intended recipient, be aware that any review, disclosure, copying, distribution, or use of the contents of this catalog is strictly prohibited. If you have received this in error, please destroy it and notify us immediately via [notices@taitcommunications.com](mailto:notices@taitcommunications.com)

#### **TRADEMARKS:**

The words “Tait”, “Tait Unified”, “TeamPTT” and the “Tait” logo are trademarks of Tait International Limited. Access to the Tait Websites does not confer on you any license in respect of any of Tait intellectual property.

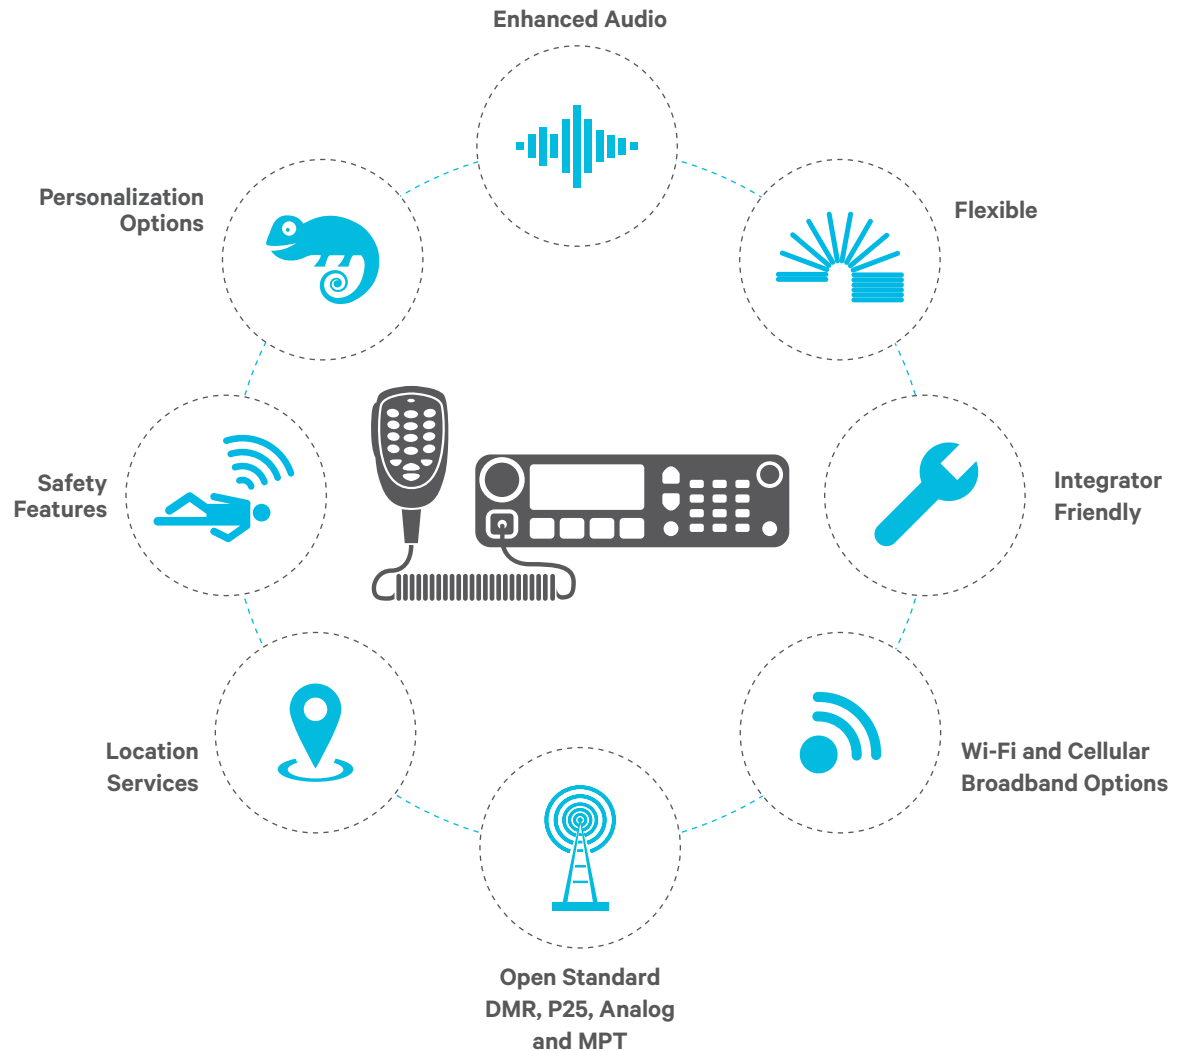

#### **UPDATE AND CHANGES:**

The information within the product catalog is subject to change without notice and shall not form part of any contract. This information is issued for guidance purposes only. Please note that not all frequency bands and power outputs are available in all markets.

The Tait TM9000 series features loud, clear audio, so teams can work safely in challenging conditions. Built Tait Tough, TM9000 mobile radios can survive harsh punishment.

These radios are highly capable and highly flexible for a wide range of voice and data applications.

Choose from DMR or P25 models, each supporting analog and digital modes, as well as a host of safety and efficiency features.

# WHY TAIT TOUGH?

## The Toughest Radios in the Industry

Tait radio users have tough jobs. Police, Fire, Emergency Services, Mining, Oil and Gas, and Utility workers face challenging conditions every day. They need communications equipment that is totally reliable. That's why Tait engineers our products to work together to create some of the toughest, mission critical communications solutions ever made.

### Operating Temperature

- ▶ -22°F to +140°F (-30°C to +60°C)

### High Performance Duty Cycle

- ▶ High performance at full power:
  - 33% duty cycle (25W radios)
  - 20% duty cycle (35W and 50W radios)

Means that these radios can perform reliably with heavy use. Making calls (transmissions) generates heat inside any radio and can affect performance. Tait mobiles are built to withstand heavy use to reliably communicate when you need it most.

Busy operations and emergency situations mean you'll be making a lot of calls. Our 25W mobiles can be transmitting 33% of the time, and our 35W and 50W mobiles can be transmitting 20% of the time without any degradation of performance, even if the ambient temperature is up to +140°F (+60°C)!

- 100% duty cycle at 5W power

At 5W power output can transmit continuously even if the ambient temperature is up to (+40°C).

### Ingress Protection (IP)

- ▶ IP54 Dust and water protected

### Military Standard MIL-STD-810G\*

Designed and tested for protection against:

- ▶ Low pressure
- ▶ Low temperature
- ▶ High temperature
- ▶ Temperature shock
- ▶ Solar radiation
- ▶ Rain
- ▶ Humidity
- ▶ Salt fog
- ▶ Sand & dust
- ▶ Vibration
- ▶ Shock

\*Supersedes MIL-STD-810C, D, E, F

Visit [www.taittough.com](http://www.taittough.com) to learn more about Tait Tough solutions and download our guide "10 Ways to Protect and Strengthen Your LMR System."

## Exceptional Audio Tailored to Your Needs

Your audio experience is vital to quality, critical communications. Hear each call the first time, to keep the channel clear for other team members that need it to do their work. Hear that call for help the first time for improved safety outcomes.

## 9 ways to tailor and optimize your audio experience

Available for...

1	<b>DIGITAL VOCODER:</b> Tait radios incorporate DMR and P25 standard compliant vocoders, which digitize human voice and can reduce many types of background noise.	Digital modes TP95/96/97/98/9900 portables
2	<b>DIGITAL NOISE SUPPRESSION:</b> Tait radios use additional software techniques to enhance clear speech and minimize background noise.	Digital modes All 9000 series radios
3	<b>ACTIVE NOISE CANCELLATION:</b> Voice and background noise are received with two separate microphones, to isolate and significantly reduce background noise.	Analog & digital modes TP9500 & TP9600 portables Custom solutions for mobiles
4	<b>PROGRAMMABLE VARIABLES:</b> A range of factors such as microphone sensitivity level, audio balance, and equalization, can all be tailored in the programming application.	Analog & digital modes All products
5	<b>SPEAKER OPTIONS:</b> Choose the model with the right speaker size, wattage and output for your needs.	Analog & digital modes
6	<b>ACCESSORY SELECTION:</b> Choose from a range of earpieces, headsets, microphones, and speakers appropriate for your role and environment.	Analog & digital modes All products
7	<b>USER TRAINING:</b> Following proper radio etiquette can make a big difference to received audio quality. Free online training is available at: <a href="http://www.taitradioacademy.com/courses/best-practice-radio-users">www.taitradioacademy.com/courses/best-practice-radio-users</a>	Analog & digital modes All products
8	<b>RF PERFORMANCE:</b> Choose devices and network equipment that have the best RF performance. Aspects such as selectivity and sensitivity can maximize coverage and minimize interference so that you can make and receive calls in more places.	Analog & digital modes All products
9	<b>TAIT SERVICES:</b> Coverage Design and Verification Services helps you to make and receive calls in more places. The Tait Services team can advise on audio experience, product and accessory selection, configuration, and much more.	Analog & digital mode All products

## Location Services for DMR, P25 and Analog

With the addition of a GNSS receiver, location data can be transmitted across analog and digital networks for more efficient operations and also can significantly enhance worker safety when combined with the Lone Worker feature that is standard in every TM9000 series mobile.

Some location services require optional software features to be enabled, as well as careful system design.

Not all features are available all of the time, and are dependent on other settings.

### DMR SPECIFIC FEATURES

- ▶ Transmit location data during voice calls in DMR Tier 2 and Tier 3 modes
- ▶ DMR Tier 3 fast polling is ideal for large fleets to have the most accurate and timely updates to enhance the safety and efficiency of your operation
- ▶ If location polling is not configured on your DMR Tier 2 or Tier 3 networks, users can send their location data to other radios as a text message

### LOCATION DISPLAY

Location data can also be displayed on the radio screen. Vital information for radio users is available even if off the network, or if polling and transmission is not configured:

- ▶ Latitude / Longitude
- ▶ Latitude / Longitude with Decimal-Minutes
- ▶ Decimal Latitude / Longitude
- ▶ Altitude (in meters above or below mean sea level)
- ▶ Local Time
- ▶ UTM Coordinates / Relative Position / UTC Time
- ▶ Course / Speed
- ▶ Age

UTM Zone Number

Latitude / Longitude with Decimal-Minutes (3 decimal places)

The radio's current course and speed

The radio's altitude in metres above sea-level

Latitude / Longitude in Decimal-Degrees

Latitude / Longitude in Decimal-Degrees

UTC: Coordinated Universal Time 24 hour clock

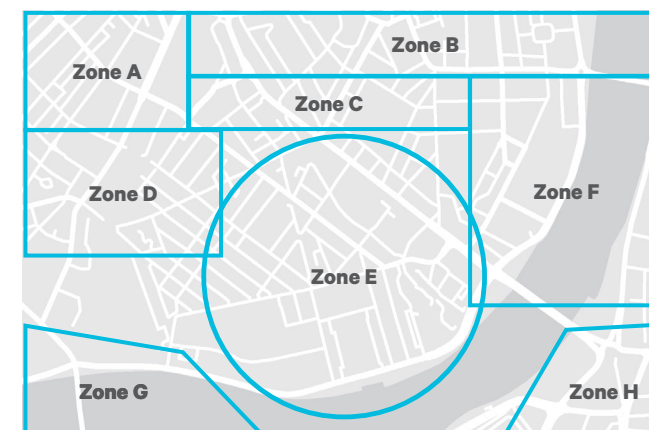

MGRS: Military Grid Reference System

### TAIT GEOFENCING OPTION

Automated Location Controlled Radio Behavior

- ▶ GeoFencing is the process of creating a virtual geographic boundary, which triggers a programmed response when a radio enters or leave the area
- ▶ Tait offers control of a significant range of functions and features, as well as configurability options that can be tailored to customer specific needs
- ▶ Tait GeoFencing has the ability to operate independently of any such software application, and the real power of this feature is that the Tait radio uses its own location data to automatically perform actions that make the radio easier to use and enhance worker safety
- ▶ Tait GeoFencing is not constrained by system polling rate reporting limitations and therefore can utilize much higher polling rates within the radio (currently one poll per second)
- ▶ Tait GeoFencing is fully compatible with Tait EnableFleet

### GeoFence zone examples

## Fleet Management Best Practice

Tait EnableFleet provides total visibility and management of your radio fleet from a secure, central point of control.

It is a software tool that makes best practice configuration management easy, and can be hosted in the cloud or on customer premises.

With Tait EnableFleet you can connect to your devices and program both configuration updates as well as upgrade to new software versions in a number of ways:

- ▶ Wired connection
- ▶ OTAP (Over the Air Programming) via digital trunked radio networks
- ▶ OTAP (Over the Air Programming) via Wi-Fi networks

## TM9000 Family Tree

Each radio in the TM9000 series is a highly flexible and configurable software platform that can be tailored to suit your current and future needs. There are a variety of models and options to meet a wide range of critical communications needs.

<sup>1</sup> Multiband capability with TM9700/TM9800/TM9356/TM9456

<sup>2</sup> Optional for TM9355 and TM9455 mobiles only

# TAIT DMR

## A smart investment, made to evolve

Tait DMR is a digital communications platform that delivers commercial and worker safety benefits for mission critical users. With the capability to carry both voice and data, Tait DMR gives you a powerful combination of flexibility, control, and resiliency. Tait DMR products support conventional analog and MPT operation, and the digital modes follow the DMR Association's open standard, ensuring interoperability with other compliant equipment.

Tait customers have tough jobs in industries that place challenges on users and equipment. That is why Tait engineered the TM9300 series to be flexible, high-performing, and extremely reliable for safe and efficient operations.

## DMR and Analog Selection Guide

### TM9000 series feature overview

Many features and options are available across the range of TM9300 mobiles, and each model offers something unique to meet the needs of a variety of users and environments. This comparison table is a brief overview of the options available for your fleet. The frequency band guide on the following page is also an important reference. For detailed feature comparisons, refer to **page 20**.

● Standard feature

▲ Optional feature

<sup>1</sup> Wi-Fi OTAP requires an option board and Tait EnableFleet

<sup>2</sup> Requires TMX450

<sup>3</sup> Internal speaker available for TM9300 and TM9700 fitted with TCH3 (4W), TCH4 (4W), or LCH (3W). Not available with TCH6 or HHCH.

<sup>4</sup> Standard for HHCH packages. Optional for LCH, TCH, TM9315 and TM9395.

<sup>5</sup> Requires GNSS Receiver to be fitted

## DMR and Analog Frequency Bands

Tait has an extensive range of frequency band options available. Please refer to individual product specification sheets or contact your Tait representative for more detailed information about frequency options, RF performance, and regulatory compliance.

FREQUENCY CODE	FREQUENCY BAND	TM9300 25W	TM9300 HIGH POWER	TM9700 25W
B1	136-174MHz	•	• 50W	•
C0	174-225MHz	•		
HK <sup>2</sup>	378-470MHz <sup>1,2</sup>		• 40W	•
H5 <sup>2</sup>	400-470MHz <sup>2</sup>	•		
H7 <sup>2</sup>	450-520MHz <sup>2</sup>	•	• 40W	•
K5	757-870MHz <sup>3</sup>		• 35W	

- <sup>1</sup>
HK 378-470MHz hardware supersedes the H5 400-470MHz hardware previously available
- <sup>2</sup>
The UHF band radios are approved for use in Citizen Band (CB) in Australia and New Zealand when programmed to meet the requirements of AS/NZS4365. Tait cannot guarantee full performance to the published specifications when the HK or H5 radios are operating at the CB frequencies.
- <sup>3</sup>
FCC and IC approved (ETSI approval not available)

# TM9700 25W Mobile

## Flexible, Rugged and Reliable Multiband Communications

Increase worker safety and productivity across multiple radio networks and frequency bands with the TM9700 Multiband Mobile, a highly reliable and versatile radio designed to adapt to a wide variety of operations.

TCH3

TCH4

TCH6

LARGE CONTROL HEAD (LCH)

HAND HELD CONTROL HEAD (HHCH)

### FEATURES

#### ► Seamless Multiband Performance

- Configurable to operate across 136-174MHz or 378-520MHz
- Flexible and simple ordering and deployment of single band or multiband operation at time of purchase, or subsequently over the air
- Bands are not locked and can be reconfigured

#### ► Future-proof multimode flexibility

- DMR Tier 3 digital trunking option
- DMR Tier 2 conventional digital
- MPT 1327 trunking
- Conventional analog FM

#### ► DMR open standards provide choice and interoperability

#### ► A variety of user interface options

- 4W speaker built in to TCH3 and TCH4 Control Heads
- 3W speaker built in to Large Control Head
- 10W and 15W External Speaker Options for TCH and LCH. External Speaker required for TCH6 and HHCH
- Clear audio with Digital Noise Suppression
- Four programmable function keys with LCH and TCH3, five programmable function keys with TCH4 and TCH6, six programmable function keys with HHCH
- Remote Control Head cable options available up to 30ft (9m)
- A range of installation options and accessories are available

#### ► Safety and efficiency features

- Lone Worker
- Programmable emergency key
- Location Services option<sup>1</sup>
- Tait GeoFencing<sup>1,2</sup> option for Automated Location Controlled Radio Behavior
- Send and receive text and status messages
- Encryption options

#### ► Tait EnableFleet configuration management options

- Wired connection for all operating modes
- Over the Air Programming for configuration changes and software upgrades over DMR Tier 3 networks

#### ► Personalize your radio:

- HHCH available in black, yellow, red and green
- LCH available in black, yellow, and green

#### Note:

<sup>1</sup> Requires GNSS Receiver to be fitted

<sup>2</sup> Optional software feature

# TM9355

## High Performance, Extremely Flexible

The TM9355 is a high-performing reliable radio for critical communications. Supporting multiple DMR and analog modes, safety-enhancing features and a rugged, robust design, the TM9355 is highly configurable to suit your current operation and can adapt to meet future needs.

### FEATURES

#### ► Future-proof multimode flexibility

- DMR Tier 3 digital trunking option
- DMR Tier 2 conventional digital
- MPT 1327 trunking
- Conventional analog FM

#### ► DMR open standards provide choice and interoperability

#### ► A variety of user interface options

- 4W speaker built in to TCH3 and TCH4 Control Heads
- 3W speaker built in to Large Control Head
- 10W and 15W External Speaker Options for TCH and LCH. External Speaker required for TCH6 and HHCH
- Clear audio with Digital Noise Suppression
- Four programmable function keys with LCH and TCH3, five programmable function keys with TCH4 and TCH6, six programmable function keys with HHCH
- Remote Control Head cable options available up to 30ft (9m)
- Dual control head options (TM9357 – refer to Mobiles Options and Accessories Catalog for configuration details)
- A range of installation options and accessories are available

#### ► Safety and efficiency features

- Lone Worker
- Programmable emergency key
- Location Services option<sup>1</sup>
- Tait GeoFencing<sup>1,2</sup> option for Automated Location Controlled Radio Behavior

- Send and receive text and status messages
- Encryption options

#### ► TMX450 option

- Broadband Wi-Fi and Cellular (Dual SIM)
- On-board computing power
- On-board data storage
- Voice Recorder app
- Application Builder

#### ► Tait EnableFleet configuration management options

- Wired connection for all operating modes
- Over the Air Programming for configuration changes and software upgrades over DMR Tier 3 networks, or via Wi-Fi or Cellular with optional TMX450

#### ► Personalize your radio:

- HHCH available in black, yellow, red and green
- LCH available in black, yellow, and green

#### Note:

- 1 Requires GNSS Receiver to be fitted
- 2 Optional software feature

# TM9315

## High Performance, Extremely Flexible

The TM9315 is a high-performing, reliable radio for critical communications with a simple, easy-to-use interface. Supporting multiple DMR and analog modes, safety-enhancing features and a rugged, robust design, the TM9315 is highly configurable to suit your current operation and can adapt to meet future needs.

### FEATURES

- ▶ **Future-proof multimode flexibility**
  - DMR Tier 3 digital trunking option
  - DMR Tier 2 conventional digital
  - MPT 1327 trunking
  - Conventional analog FM
- ▶ **DMR open standards provide choice and interoperability**
- ▶ **Usability**
  - 3W speaker built in to Control Head
  - 10W and 15W External Speaker Options
  - Clear audio with Digital Noise Suppression
  - Four programmable function keys
  - A range of installation options and accessories are available
- ▶ **Safety and efficiency features**
  - Lone Worker
  - Programmable emergency key
  - Location Services option<sup>1</sup>
  - Tait GeoFencing<sup>1,2</sup> option for Automated Location Controlled Radio Behavior
  - Encryption options
- ▶ **Tait EnableFleet configuration management options**

### Note:

- <sup>1</sup> Requires GNSS Receiver to be fitted
- <sup>2</sup> Optional software feature

2 DIGIT CONTROL HEAD

# TM9395

## High Performance, Extremely Flexible

The TM9395 is designed for custom integration solutions that do not require an interactive control head, such as integration to 3<sup>rd</sup> party user interface for voice and data operation, or for data-only operation that does not require a user interface.

**PROGRAMMING CONTROL HEAD**

### FEATURES

#### ► Multi-mode flexibility

- DMR Tier 2 conventional digital
- Conventional analog FM
- Crossband Repeat (analog mode)

#### ► Software control

- CCDI and RAP protocol support for radio control from internal options boards or external devices
- Software controls many aspects of the operating functionality of the terminal, including dialing and ringing
- Access to modems or data transport in both analog and digital modes
- Control of IO lines and voice services

#### ► Hardware connectivity

- Auxiliary connector on the rear of the radio supports IO, serial control, audio lines including a microphone input
- Internal options boards space
- Internal options connector supports IO, serial control, audio and power
- Blanked off miniature "D" connector space in the options area

#### ► Data features

- Data services on DMR include full packet data on DMR Tier 3 and the SDM service on DMR Tier 2
- 1200/2400 bps modem in Analog Conventional
- SST, MST and NPD data calls on MPT1327

- Status and text support on MPT1327 and DMR Tier 3
- Status support on DMR Tier 2
- Location Services option<sup>1</sup>
- Tait GeoFencing<sup>1,2</sup> option for Automated Location Controlled Radio Behavior
- Encryption options

#### ► Voice access

- Unbalanced audio in and out via tap points (fixed level)
- Microphone input on auxiliary connector
- Audio Out at 10W maximum to drive an external loudspeaker
- A range of installation options and accessories are available

#### ► Tait EnableFleet configuration management options

#### Note:

<sup>1</sup> Requires GNSS Receiver to be fitted

<sup>2</sup> Optional software feature

## Software Feature Enabler (SFE) Descriptions (continued)

### TM9000 series DMR and Analog

A number of Software Feature Enabler (SFEs) are available for TM9300 mobiles.

All SFEs are licenced per feature per radio.

#### When ordering a new radio:

- ▶ Some SFE licences are included by default in the baseline feature set of current production radios as described below.
- ▶ Optional SFE licences can be ordered to enhance the capability of your new radio from the start.

#### Upgrading existing fleets:

- ▶ The configuration file of each radio will show what SFEs are currently licenced or installed.
- ▶ Additional SFEs can be ordered and deployed to upgrade and enhance existing fleets.
- ▶ Adding software licences to existing fleets may require a radio firmware update as well as the feature licence.
- ▶ Please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

### BASELINE SOFTWARE LICENCES (FOR NEW RADIO ORDERS)

Included by default in all current production TM9300, with exceptions for some models as noted \*.  
Can also be ordered to upgrade existing fleets that may not have these features deployed.

#### DMR TIER 2 CONVENTIONAL DIGITAL

 TMS097

#### MPT ANALOG TRUNKING

 TMS031

MPT1327 Analog Trunking mode enables the mobile radio to be used on MPT networks. The TM9300 can roam seamlessly between MPT and DMR Trunked systems, providing an easy migration path from MPT to a DMR trunked system.

*\* Not supported in TM9356.*

#### ALPHANUMERIC ID

 TMS072

Permits an alphanumeric label to be embedded in digital voice transmissions, for talking party identification.

*\* Not functional in TM9315 or TM9395.*

#### LOCATION SERVICES & DISPLAY

 TMS081

The radio supports GNSS (Global Navigation Satellite System). The radio's location information can be displayed on the radio screen or sent over a network for use with location reporting (polling and unsolicited) applications.

*Mobile radios require a standalone GNSS receiver to be attached to the serial port.*

*\* TM9315 and TM9395 do not have a screen to display location information on the control head.*

#### ENHANCED LOCATION REPORTING

 TMS089

Enables distance-based location reporting. Reports can be sent at a set distance, at different distances depending on the current speed or if the bearing, or altitude changes by a prescribed amount.

*Mobile radios require a standalone GNSS receiver to be attached to the serial port.*

## Software Feature Enabler (SFE) Descriptions (continued)

### TM9000 series DMR and Analog

A number of Software Feature Enabler (SFEs) are available for TM9300 mobiles.

All SFEs are licenced per feature per radio.

#### When ordering a new radio:

- ▶ Some SFE licences are included by default in the baseline feature set of current production radios as described below.
- ▶ Optional SFE licences can be ordered to enhance the capability of your new radio from the start.

#### Upgrading existing fleets:

- ▶ The configuration file of each radio will show what SFEs are currently licenced or installed.
- ▶ Additional SFEs can be ordered and deployed to upgrade and enhance existing fleets.
- ▶ Adding software licences to existing fleets may require a radio firmware update as well as the feature licence.
- ▶ Please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

### BASELINE SOFTWARE LICENCES (FOR NEW RADIO ORDERS)

Included by default in all current production TM9000 DMR and Analog, with exceptions for some models as noted \*.  
Can also be ordered to upgrade existing fleets that may not have these features deployed.

#### ARC4 ENCRYPTION

 TMS102

Enables ARC4 (40 Bit) encryption. ARC4 is a basic level of encryption that offers privacy from less sophisticated attacks. ARC4 encryption is supported in DMR Tier 2 mode only.  
The programming application configures the way the encryption keys are used, and loads the encryption keys into the radio (does not require Tait Enable Protect Key Management System or Key Fill Device).

#### VOICE ANNUNCIATION

 TMS087

The radio can be set up to audibly announce radio ID, channel numbers, zones, network, battery level, and certain feature activation/deactivations such as Lone Worker.

#### OTAP

 TMS075-DMR

OTAP (Over The Air Programming) makes it possible for Tait EnableFleet to update the configuration and upgrade the firmware of Tait radios via a DMR Tier 3 network's data services. OTAP is supported by Tait EnableFleet version 2.0 and above. This licence specifically enables OTAP via DMR Tier 3. Wi-Fi OTAP is only available and enabled by default on TP9500 and TMX450.

*Requires TMS080 DMR Tier 3 optional SFE to be enabled.*

#### 20/25KHZ WIDEBAND

 TMS083

This licence enables 20/25kHz wideband operation on all frequencies. Local regulations on usage of wideband operation must be observed.

## Software Feature Enabler (SFE) Descriptions (continued)

### TM9000 series DMR and Analog

A number of Software Feature Enabler (SFEs) are available for TM9300 mobiles.

All SFEs are licenced per feature per radio.

#### When ordering a new radio:

- ▶ Some SFE licences are included by default in the baseline feature set of current production radios as described below.
- ▶ Optional SFE licences can be ordered to enhance the capability of your new radio from the start.

#### Upgrading existing fleets:

- ▶ The configuration file of each radio will show what SFEs are currently licenced or installed.
- ▶ Additional SFEs can be ordered and deployed to upgrade and enhance existing fleets.
- ▶ Adding software licences to existing fleets may require a radio firmware update as well as the feature licence.
- ▶ Please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

### OPTIONAL SOFTWARE LICENCES

Optional features may be licenced for each radio at the time of purchase, or can be ordered and deployed to existing fleets. Adding software licences to existing fleets may require a radio firmware update as well as the feature licence – please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

#### MULTIBAND CAPABILITY

Enables TM9700 to operate seamlessly over VHF (136-174MHz) and UHF (378-520MHz) frequency bands

*\* Supported in TM9700 & TM9800 mobiles only*

 **TMAS133**

#### DMR TIER 3 DIGITAL TRUNKING

Enables DMR Tier 3 trunking operation in TM9300 radios. The TM9300 can roam seamlessly between DMR Tier 3 networks and analog MPT trunked networks.

*\* Not supported in TM9356.*

 **TMAS080**

#### GEOFENCING AUTOMATION

Enables Automated Location Controlled Radio Behavior. Automatically change mode, change channel and send alert messages based on pre-programmed software boundaries. Multiple regions of various simple and/or complex shapes and sizes and overlays can be configured and a set of actions can be associated with entry/exit from these regions. Actions such as sending status messages, controlling GPIO, and activating features such as Lone Worker can be achieved.

*Mobile radios require a standalone GNSS receiver to be attached to the serial port.*

*Refer to the Tait GeoFencing manual for detailed information.*

 **TMAS105-DMR**

#### EMBEDDED GPS DECODING

Enables the forwarding of location information embedded in received voice frames to a CCDI serial port for further processing.

*Supported for DMR Tier 2 operation.*

 **TMAS107**

#### USER IP DATA

Enables IP forwarding between a DMR Tier 3 bearer and a serially-connected data peripheral. This allows third party IP-based applications to send and receive packet data between a local data peripheral and a remote host, utilizing the traffic channels of the Tait DMR network.

*Requires TMAS080 DMR Tier 3 optional SFE to be enabled.*

 **TMAS056-DMR**

## Software Feature Enabler (SFE) Descriptions (continued)

### TM9000 series DMR and Analog

A number of Software Feature Enabler (SFEs) are available for TM9300 mobiles.

All SFEs are licenced per feature per radio.

#### When ordering a new radio:

- ▶ Some SFE licences are included by default in the baseline feature set of current production radios as described below.
- ▶ Optional SFE licences can be ordered to enhance the capability of your new radio from the start.

#### Upgrading existing fleets:

- ▶ The configuration file of each radio will show what SFEs are currently licenced or installed.
- ▶ Additional SFEs can be ordered and deployed to upgrade and enhance existing fleets.
- ▶ Adding software licences to existing fleets may require a radio firmware update as well as the feature licence.
- ▶ Please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

### OPTIONAL SOFTWARE LICENCES

Optional features may be licenced for each radio at the time of purchase, or can be ordered and deployed to existing fleets. Adding software licences to existing fleets may require a radio firmware update as well as the feature licence – please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

#### ENCRYPTION - DES 56 BIT

 **TAS095**

Enables the use of DES (56 Bit) encryption on DMR systems for voice communications. The Programming Application configures the way the encryption keys are used, and loads the encryption keys into the radio (Does not require Tait Enable Protect Key Management System or Key Fill Device).

*\* TM9315 or TM9395 are unable to display the status of encrypted or clear channels.*

#### ENCRYPTION - AES 128/256 BIT - SINGLE KEY

 **TAS058-DMR**

Enables use of AES encryption (128-bit/256-bit) on DMR systems for voice communications. The Programming Application configures the way the encryption keys are used, and loads the encryption key into the radio (Does not require Tait Enable Protect Key Management System or Key Fill Device).

*\* TM9315 or TM9395 are unable to display the status of encrypted or clear channels.*

# TAIT P25

## Instant, reliable communications is just the beginning

First responders around the world trust Tait for multi-agency coordination in challenging situations. We are dedicated to designing and delivering proven P25 solutions that are robust, interoperable, and secure. With support for analog, P25 Phase 1 and P25 Phase 2 open standards, Tait can provide public safety agencies with complete end-to-end solutions to meet your unique organizational requirements.

Tait P25 and analog mobile radios are designed and built to withstand the challenging conditions public safety users operate in. Packed with a range of safety-enhancing features, our mobiles provide the clear audio, reliable connection, and interoperability that those serving our communities depend on.

## P25 and Analog Selection Guide

### TM9000 series feature overview

Many features and options are available across the range of TM9000 mobiles and each model offers something unique to meet the needs of users and environments. This comparison table is a quick guide to the models to take a closer look at to include in your fleet. For detailed feature comparisons, refer to **page 41**.

## P25 and Analog Frequency Bands

Tait has an extensive range of frequency band options available. Please refer to individual product specification sheets or contact your Tait representative for more detailed information about frequency options, RF performance, and regulatory compliance.

FREQUENCY CODE	FREQUENCY BAND	TM9900	TM9800 25W	TM9400 25W	TM9400 HIGH POWER
B1	136-174MHz	● 50W	●	●	● 50W
HK <sup>2</sup>	378-520MHz <sup>1,2</sup>	● 40W	●		● 40W
H5 <sup>2</sup>	400-470MHz <sup>2,4</sup>	● 40W		●	
H7 <sup>2</sup>	450-520MHz <sup>2</sup>	● 40W	●	●	● 40W
K5	762-870MHz <sup>3</sup>	● 35W			● 35W
L3	896-941MHz	● 30W			

<sup>1</sup>
HK 378-470MHz hardware supersedes the H5 400-470MHz hardware previously available

<sup>2</sup>
The UHF band radios are approved for use in Citizen Band (CB) in Australia and New Zealand when programed to meet the requirements of AS/NZS4365. Tait cannot guarantee full performance to the published specifications when the HK and H5 radios are operating at the CB frequencies

<sup>3</sup>
FCC and IC approved (ETSI approval not available)

<sup>4</sup>
Wideband operation is not available in the USA in some bands

- Standard feature
- ▲ Optional feature

# TM9900 Mobile

## Flexible, Reliable, Multi-Agency Cooperation

Multiple bands. P25 and DMR protocols. One mobile. Significantly improve community safety outcomes with enhanced interoperability between first responders, schools, utilities and other public sector organizations with the TM9900, a high-powered mobile to access P25, DMR and analog channels in multiple frequency bands.

TCH3

TCH4

TCH6

LARGE CONTROL HEAD (LCH)

HAND HELD CONTROL HEAD (HHCH)

### FEATURES

#### ► Seamless Multiband Performance

- Configurable to operate on any combination of VHF, UHF, 700/800MHz and 900MHz bands
- Flexible and simple ordering and deployment of single band or multiband operation at time of purchase, or subsequently over the air
- Bands are not locked and can be reconfigured

#### ► Future-proof multimode flexibility

- Conventional Analog
- P25 Conventional Digital
- P25 Phase 1 Digital Trunking
- P25 Phase 2 Digital Trunking
- DMR Tier 2 Conventional Digital<sup>1</sup>
- DMR Tier 3 Digital Trunking<sup>1</sup>

#### ► P25 open standards provide choice and interoperability

#### ► A variety of user interface options

- TCH series high resolution color displays
- 4W speaker built into TCH3 and TCH4 Control Heads
- 3W speaker built into Large Control Head
- 15W External Speaker Options for TCH and LCH. External Speaker required for TCH6 and HHCH
- Clear audio with Digital Noise Suppression
- Four programmable function keys with LCH and TCH3, five programmable function keys with TCH4 and TCH6, six programmable function keys with HHCH

- Remote Control Head cable options available up to 30ft (9m)
- Bluetooth Option for wireless audio accessories
- A range of installation options and accessories are available

#### ► Safety and efficiency features

- Lone Worker
- Programmable emergency key
- Location Services option (GNSS)<sup>2</sup>
- Tait GeoFencing<sup>3,4</sup> option for Automated Location Controlled Radio Behavior
- Send and receive text and status messages
- End-to-end AES encryption support

#### ► Tait EnableFleet configuration management options

- Wired connection for all operating modes
- Over the Air Programming for configuration changes and software upgrades over P25 or DMR Trunked Networks
- Wi-Fi OTAP Option<sup>2</sup>

#### ► Personalize your radio:

- HHCH available in black, yellow, red and green
- LCH available in black, yellow, and green

### Note:

- <sup>1</sup> Refer to pages 16-27 for a detailed DMR feature list
- <sup>2</sup> OTAP via Wi-Fi, P25 or DMR requires Tait EnableFleet
- <sup>3</sup> Requires GNSS Receiver to be fitted
- <sup>4</sup> Optional software feature

# TM9800 25W Mobile

## Flexible, Reliable, Multi-Agency Cooperation

The TM9800 is a high-performing, flexible and robust mobile, designed for use in challenging environments while delivering high quality audio and intuitive operation to first responders around the world.

TCH3

TCH4

TCH6

LARGE CONTROL HEAD (LCH)

HAND HELD CONTROL HEAD (HHCH)

### FEATURES

#### ► Seamless Multiband Performance

- Configurable to operate across 136-174MHz or 378-520MHz

# TM9455

## High Performance, Extremely Flexible

The TM9455 is a high performing reliable radio for critical communications. Supporting multiple P25 and analog modes, safety-enhancing features, and a rugged, robust design, the TM9455 is highly configurable to suit your current operation and can adapt to meet future needs.

### FEATURES

#### ► Future-proof multimode flexibility

- Conventional Analog
- P25 Conventional Digital
- P25 Phase 1 Digital Trunking
- P25 Phase 2 Digital Trunking

#### ► P25 open standards provide choice and interoperability

#### ► A variety of user interface options

- 4W speaker built in to TCH3 and TCH4 Control Heads
- 3W speaker built in to Large Control Head
- 10W and 15W External Speaker Options for TCH and LCH. External Speaker required for TCH6 and HHCH
- Clear audio with Digital Noise Suppression
- Four programmable function keys with LCH and TCH3, five programmable function keys with TCH4 and TCH6, six programmable function keys with HHCH
- Remote Control Head cable options available up to 30ft (9m)
- Dual control head option with LCH and HHCH (refer to Mobiles Options and Accessories Catalog for configuration)
- A range of installation options and accessories are available

#### ► Safety and efficiency features

- Lone Worker
- Programmable emergency key
- Location Services option<sup>1</sup>
- Tait GeoFencing<sup>1,2</sup> option for Automated Location Controlled Radio Behavior

- Send and receive text and status messages
- Encryption options, including Tait EnableProtect KeyFill Device, Key Management Facility, Advanced System Key and Over the Air Rekeying
- **TMX450 option**
  - Broadband Wi-Fi and Cellular (Dual SIM)
  - On-board computing power
  - On-board data storage
  - Voice Recorder app
  - Application Builder
- **Tait EnableFleet configuration management options**
  - Wired connection for all operating modes
  - Over the Air Programming for configuration changes and software upgrades over P25 Trunked networks, or via Wi-Fi or Cellular with optional TMX450
- **Personalize your radio:**
  - HHCH available in black, yellow, red and green
  - LCH available in black, yellow, and green

#### Note:

<sup>1</sup> Requires GNSS Receiver to be fitted

<sup>2</sup> Optional software feature

- Tait GeoFencing<sup>1,2</sup> option for Automated Location Controlled Radio Behavior

- Send and receive text and status messages
- Encryption options, including Tait EnableProtect KeyFill Device, Key Management Facility, Advanced System Key and Over the Air Rekeying
- **Tait EnableFleet configuration management options**
  - Wired connection for all operating modes
  - Over the Air Programming for configuration changes and software upgrades over P25 Trunked networks
- **Personalize your radio:**
  - HHCH available in black, yellow, red and green
  - LCH available in black, yellow, and green

#### Note:

- <sup>1</sup> Requires GNSS Receiver to be fitted
- <sup>2</sup> Optional software feature

## Software Feature Enabler (SFE) Descriptions

### TM9000 series P25 and Analog

A number of Software Feature Enabler (SFEs) are available for TM9000 mobiles.

All SFEs are licenced per feature per radio.

#### When ordering a new radio:

- ▶ Some SFE licences are included by default in the baseline feature set of current production radios as described below.
- ▶ Optional SFE licences can be ordered to enhance the capability of your new radio from the start.

#### Upgrading existing fleets:

- ▶ The configuration file of each radio will show what SFEs are currently licenced or installed.
- ▶ Additional SFEs can be ordered and deployed to upgrade and enhance existing fleets.
- ▶ Adding software licences to existing fleets may require a radio firmware update as well as the feature licence.
- ▶ Please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

#### BASELINE SOFTWARE LICENCES (FOR NEW RADIO ORDERS)

Included by default in all current production TM9000 P25, with exceptions for some models as noted \*.  
Can also be ordered to upgrade existing fleets that may not have these features deployed.

##### ENHANCED CHANNEL CAPACITY

Increases the maximum number of channels supported by the radio (across all zones) from 1000 channels to 4000 channels.

 **TMAS086**

##### LOCATION DISPLAY

Enables the ability to display the radio's location information on the radio screen.

*Mobile radios require a standalone GNSS receiver to be attached to the serial port.*

 **TMAS015**

##### ALPHANUMERIC ID

Permits an alphanumeric label to be embedded in digital voice transmissions, for talking party identification. This is a Tait-proprietary feature which does not interoperate with other vendor's radios.

*Not functional in P25 Phase 2 Trunked operation.*

 **TMAS072**

##### VOICE ANNUNCIATION

The radio can be set up to audibly announce radio ID, channel numbers, zones, network, battery level and certain feature activation/deactivations such as Lone Worker.

 **TMAS087**

##### P25 TRUNKED PSTN

This licence enables full keypad portables to utilize PSTN (Public Switch Telephone Network) dialing via P25 trunked networks. An example configuration is network PSTN gateway from a radio unit to a PSTN subscriber, and a PSTN subscriber to radio unit or radio group. Only available for use on some trunked networks - contact your Tait representative for advice.

*Requires Keypad Microphone or Hand Held Control Head and TMAS055 as a prerequisite to operate.*

 **TMAS064**

## Software Feature Enabler (SFE) Descriptions (continued)

### TM9000 series P25 and Analog

A number of Software Feature Enabler (SFEs) are available for TM9000 mobiles.

All SFEs are licenced per feature per radio.

#### When ordering a new radio:

- ▶ Some SFE licences are included by default in the baseline feature set of current production radios as described below.
- ▶ Optional SFE licences can be ordered to enhance the capability of your new radio from the start.

#### Upgrading existing fleets:

- ▶ The configuration file of each radio will show what SFEs are currently licenced or installed.
- ▶ Additional SFEs can be ordered and deployed to upgrade and enhance existing fleets.
- ▶ Adding software licences to existing fleets may require a radio firmware update as well as the feature licence.
- ▶ Please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

### BASELINE SOFTWARE LICENCES (FOR NEW RADIO ORDERS)

Included by default in all current production TM9000 P25 and Analog, with exceptions for some models as noted \*.  
Can also be ordered to upgrade existing fleets that may not have these features deployed.

#### MDC1200

Enables use of the MDC1200 Analog conventional signaling method (Motorola-proprietary). Features include push-to-talk identification, selective calling, and emergency alarm.

 **TMS059**

#### 2-TONE DECODE

Two-tone signaling (also known as Type-99) is in-band, two-tone sequential signaling. Two-tone signaling is used for selective calling of individual radios, groups of radios, or pagers.

 **TMS065**

#### 5-TONE SELCALL

Enables a 'selective calling' feature that uses sequences of audible tones to isolate calls intended for specific radios. Each radio operating on a Selcall network can have a unique identity assigned. Selcall is also known as multi-tone or five-tone.

 **TMS092**

#### OTAP

OTAP (Over the Air Programming) allows the configuration and firmware of Tait Radios to be remotely and wirelessly updated by Tait EnableFleet using the radio network's data services. OTAP is supported by Tait EnableFleet version 2.0 and above. This licence specifically enables OTAP via P25 Trunked networks. Wi-Fi OTAP is only available and enabled by default on TMX450.

*Requires TMS055 to be enabled as a prerequisite.*

 **TMS075**

#### 20/25KHZ WIDEBAND

This licence enables 20/25kHz wideband operation on all frequencies. Local regulations on usage of wideband operation must be observed.

 **TMS083**

## Software Feature Enabler (SFE) Descriptions (continued)

### TM9000 series P25 and Analog

A number of Software Feature Enabler (SFEs) are available for TM9000 mobiles.

All SFEs are licenced per feature per radio.

#### When ordering a new radio:

- ▶ Some SFE licences are included by default in the baseline feature set of current production radios as described below.
- ▶ Optional SFE licences can be ordered to enhance the capability of your new radio from the start.

#### Upgrading existing fleets:

- ▶ The configuration file of each radio will show what SFEs are currently licenced or installed.
- ▶ Additional SFEs can be ordered and deployed to upgrade and enhance existing fleets.
- ▶ Adding software licences to existing fleets may require a radio firmware update as well as the feature licence.
- ▶ Please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

#### What to consider when ordering a TM9900 mobile radio:

- ▶ When P25 AES and/or P25 Geofencing SFE's are purchased, the corresponding DMR SFEs will also be enabled.
- ▶ The DMR Tier 3 Trunking SFE (TPA080) is available as a separate option.

### OPTIONAL SOFTWARE LICENCES AND BUNDLES

Optional features may be licenced for each radio at the time of purchase, or can be ordered and deployed to existing fleets. An SFE key shown as part of a bundle can also be ordered individually if required.

#### MULTIBAND OPERATION

Enables TM9700, TM9800 and TM9900 to operate seamlessly over two or more frequency bands

- Dual Band SFE
- Multiband SFE
- Dual to Multiband Upgrade SFE

 **TMAS133**

 **TMAS134\***

 **TMAS135\***

#### MULTIPROTOCOL BUNDLE - TM9900 ONLY

Includes:

- TMAS136 Multiprotocol Operation
- TMAS081 Location Services & Display
- TMAS097 DMR Tier 2 Conventional Digital
- TMAS031 MPT Analog Trunking

 **TMAS160**

#### P25 CAI AND CONVENTIONAL DIGITAL OPERATION

Enables the P25 Standard CAI (Common Air Interface) and Conventional Digital Operation - FDMA 12.5kHz channel bandwidth.

 **TMAS050**

#### P25 PHASE 1 TRUNKING BUNDLE

Includes:

- **TMAS050 - P25 CAI and Conventional Digital Operation:** FDMA 12.5kHz channel bandwidth
- **TMAS055 - P25 Phase 1 Trunking Operation:** FDMA 12.5kHz channel bandwidth
- **TMAS100 - Link Layer Authentication:** Allows a P25 Trunked network to authenticate the radio before granting it service. Authentication uses a cryptographically encoded (AES-128) challenge/response protocol in accordance with TIA-102.AACE.

 **TMAS151**

#### P25 PHASE 2 TRUNKING BUNDLE

Includes:

- **TMAS050 - P25 CAI and Conventional Digital Operation:** FDMA 12.5kHz channel bandwidth
- **TMAS055 - P25 Phase 1 Trunking Operation:** FDMA 12.5kHz channel bandwidth
- **TMAS091 - P25 Phase 2 Trunking Operation:** TDMA 2 channels per 12.5kHz channel (equivalent to 6.25kHz channel bandwidth)
- **TMAS100 - Link Layer Authentication:** Allows a P25 Trunked network to authenticate the radio before granting it service. Authentication uses a cryptographically encoded (AES-128) challenge/response protocol in accordance with TIA-102.AACE.

 **TMAS152**

Optional features may be licenced for each radio at the time of purchase, or can be ordered and deployed to existing fleets. An SFE key shown as part of a bundle can also be ordered individually if required.

\*TM9800 and TM9900 only

## Software Feature Enabler (SFE) Descriptions (continued)

### TM9000 series P25 and Analog

A number of Software Feature Enabler (SFEs) are available for TM9000 mobiles.

All SFEs are licenced per feature per radio.

#### When ordering a new radio:

- ▶ Some SFE licences are included by default in the baseline feature set of current production radios as described below.
- ▶ Optional SFE licences can be ordered to enhance the capability of your new radio from the start.

#### Upgrading existing fleets:

- ▶ The configuration file of each radio will show what SFEs are currently licenced or installed.
- ▶ Additional SFEs can be ordered and deployed to upgrade and enhance existing fleets.
- ▶ Adding software licences to existing fleets may require a radio firmware update as well as the feature licence.
- ▶ Please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

### OPTIONAL SOFTWARE LICENCES AND BUNDLES

#### P25 CAP ENCRYPTION AES (MULTIKEY) / DES BUNDLE

 **TMAS153**

Includes:

- **TMAS058 - AES Encryption:** Multikey
- **TMAS057 - DES Encryption**

P25 CAP (Compliance Assessment Program) requires AES 256 Bit Encryption. DES Encryption is provided only for backwards compatibility with and migration from older equipment. TMAS058 enables the device to utilize multiple encryption keys and is the highest level of encryption offered by Tait.

*Requires Tait EnableProtect KFD (Key Fill Device) to load keys via wired interface. Optional Tait EnableProtect KMF (Key Management Facility) to manage encryption keys, and optional OTAR (Over The Air Rekeying) SFE to deploy encryption keys wirelessly.*

#### P25 NON-CAP ENCRYPTION BUNDLE ARC4 / DES

 **TMAS154**

Includes:

- **TMAS057 - DES Encryption**
- **TMAS102 - ARC4 Encryption**

If P25 Compliance or if a higher level of encryption is not required, this bundle can provide a more affordable, basic level of encryption. DES is 56 Bit. DES and ARC4 are a basic level of encryption that offers privacy from less sophisticated attacks.

#### P25 OTAR (OVER THE AIR REKEYING)

 **TMAS156**

Includes:

- **TMAS054 - P25 Base OTAR:** Enables the ability for the radio to interact with a Key Management Facility over a P25 Conventional bearer, for the provisioning and management of encryption keys in the radio.
- **TMAS063 - P25 DLI/Trunked OTAR:** Enables the ability for the radio to interact with a Key Management Facility over a P25 Trunked bearer, for the provisioning and management of encryption keys in the radio.

#### P25 ADMINISTRATOR SERVICES

 **TMAS051**

Enables the ability to transmit certain supplementary service requests from the radio on conventional P25 systems, such as transmit radio inhibits and uninhibits, status requests, call alert requests, radio check requests, radio unit monitoring, messages. Such services are typically used by dispatchers.

Optional features may be licenced for each radio at the time of purchase, or can be ordered and deployed to existing fleets. An SFE key shown as part of a bundle can also be ordered individually if required.

## Software Feature Enabler (SFE) Descriptions (continued)

### TM9000 series P25 and Analog

A number of Software Feature Enabler (SFEs) are available for TM9000 mobiles.

All SFEs are licenced per feature per radio.

#### When ordering a new radio:

- ▶ Some SFE licences are included by default in the baseline feature set of current production radios as described below.
- ▶ Optional SFE licences can be ordered to enhance the capability of your new radio from the start.

#### Upgrading existing fleets:

- ▶ The configuration file of each radio will show what SFEs are currently licenced or installed.
- ▶ Additional SFEs can be ordered and deployed to upgrade and enhance existing fleets.
- ▶ Adding software licences to existing fleets may require a radio firmware update as well as the feature licence.
- ▶ Please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

### OPTIONAL SOFTWARE LICENCES AND BUNDLES

#### P25 LOCATION SERVICES BUNDLE INCLUDING GEOFENCING AUTOMATION

 TMS155

Includes:

- **TMAS067 - GPS Transmission:** Enables the ability to transmit the radio's location on a Conventional radio bearer (Analog or P25). Multiple triggers can be configured for transmission of the location, for example a user stimulus (e.g. PTT press/release), poll request from a remote host, activation of emergency. In the case of an Analog bearer, the GPS location is formatted as a Short Data Message. In the case of a P25 bearer, the GPS location is formatted as a Tier 1 AVL location packet in accordance with TIA-102.BAJB.
- **TMAS098 - Trunked GPS Transmission:** Enables the ability to transmit the radio's location on a P25 Trunked radio bearer. Multiple triggers can be configured for transmission of the location, for example a user stimulus (e.g. PTT press/release), poll request from a remote host, activation of emergency). The payload format can be configured as either P25 NMEA (uncompressed NMEA sentences over UDP/IP) or P25 Tier 2 (compressed XML format over UDP/IP in accordance with TIA-102.BAJB).
- **TMAS089 - Enhanced Location Reporting:** Enables distance-based location reporting. Reports can be sent at a set distance, at different distances depending on the current speed or if the bearing, or altitude changes by a prescribed amount.
- **TMAS105 - GeoFencing Services:** Enables Automated Location Controlled Radio Behavior. Automatically change mode, change channel and send alert messages based on pre-programmed software boundaries. Multiple regions of various simple and/or complex shapes and sizes and overlays can be configured and a set of actions can be associated with entry/exit from these regions. Actions such as sending status messages, controlling GPIO, and activating features such as Lone Worker can be achieved.

Optional features may be licenced for each radio at the time of purchase, or can be ordered and deployed to existing fleets. An SFE key shown as part of a bundle can also be ordered individually if required.

## Software Feature Enabler (SFE) Descriptions (continued)

### TM9000 series P25 and Analog

A number of Software Feature Enabler (SFEs) are available for TM9000 mobiles.

All SFEs are licenced per feature per radio.

#### When ordering a new radio:

- ▶ Some SFE licences are included by default in the baseline feature set of current production radios as described below.
- ▶ Optional SFE licences can be ordered to enhance the capability of your new radio from the start.

#### Upgrading existing fleets:

- ▶ The configuration file of each radio will show what SFEs are currently licenced or installed.
- ▶ Additional SFEs can be ordered and deployed to upgrade and enhance existing fleets.
- ▶ Adding software licences to existing fleets may require a radio firmware update as well as the feature licence.
- ▶ Please refer to Tait EnableFleet for best practice in radio configuration management to effectively deploy firmware and feature upgrades.

### OPTIONAL SOFTWARE LICENCES AND BUNDLES

#### DATA BUNDLE

 TMA5158

Includes:

- **TMA5056 - User IP Data:** Enables IP forwarding between a P25 bearer and a serially-connected data peripheral. This allows third party IP-based applications to transfer data between a local data peripheral and a remote host.
- **TMA5060 - Tait Radio API:** Enables access to the CCDI/CCR Radio API. This API provides a wide range of control and monitoring of the radio. A user can make calls, transmit, change channels, monitor the state of the receive signal, etc. The SFE also permits use of 'transparent' data transfer between a peripheral connected to the ancillary port of the radio, and a conventional bearer. Capabilities may differ between modes of operation. See CCDI specification for details.

*Requires TMA5050, or 151, or 152 as a pre-requisite.*

# Detailed Feature Comparison

## Control Head Color Options

The TM9000 Large Control Head (LCH) and Hand Held Control Head (HHCH) are available in a range of colors for easy identification.

Options are available to personalize colors for each user or group's needs. This table shows the models available in each color.

			
			
TM9x5x LCH TM9x5x HHCH TM9315, TM9395	TM9x5x HHCH	TM9x5x LCH TM9x5x HHCH	TM9x5x LCH TM9x5x HHCH

- ▶ Choose colors that are high-contrast to the environment they will be used in
- ▶ Use different colors to identify talkgroups or teams
- ▶ Select colors to match company branding
- ▶ Use a range of colors to identify radios with different access rights, encryption, broadcast rights, etc.
