Operation

Tools Required for Installation/ Maintenance

Prior to Installation

All products manufactured and supplied by Bristan are safe to use provided that they are installed, operated and receive regular maintenance in accordance with these instructions.

This product needs to be installed in accordance with, and meet the requirements of The Water Supply (Water Fittings) Regulations (Northern Ireland) 2009 and The Water Supply (Water Fittings) (Scotland) Byelaws 2014. For full Installation Requirements & Notes (IRN) please visit www.wrasapprovals.co.uk/approvals-directory

Isolation valves must be fitted to the inlet water supplies to ensure ease of future maintenance.

Before installing this product the water supply must be thoroughly flushed in order to remove any swarf, solder etc. Full access must be made available for future maintenance/servicing purposes.

This product must not be modified in any way as this will invalidate the guarantee.

Spare Parts

To replace any spare parts for your tap, why not scan the QR Code or visit www.bristan.com and search for your product.

Important

The images shown are for illustrative purposes only.

The product you have purchased may look different to those pictured in this booklet but will follow the same installation steps.

Your contents page will be specific to your product.

If you find your product or any of its components differ from those shown on the contents page, please contact our customer support.

1

Look underneath the tap body to observe fixing kit rod(s) and tail inlet positions

Depending on the model, the tap will utilise 1 or 2 fixing kit rods. Refer to your contents page

1 Fixing Rod

2 Fixing Rods

2*

Screw in the fixing kit rod(s) into the base of the tap with a screwdriver

Screw in the flexible tails by hand only.
DO NOT OVERTIGHTEN

Your model may come with a plinth and will either be included pre-attached or loose in the box*

2*

If required, thread the flexible tails and fixing kit rods through the plinth and rubber seal (if loose) and align with tap body

Take note of any grub screw holes on the underside of the tap and align them correctly to the holes on the plinth

3

Thread the flexible tails and fixing kit rods through the basin hole

If the hole is not large enough for both tail ends to fit through, screw one of the tails in from underneath the basin.

4

From underneath the basin, slide the rubber gasket and metal c plate along the fixing rod(s) **with the gasket sitting on top of the c plate**

Align the gasket and c plate, then begin tightening the nut up the rod towards the basin until secure

You can screw the nut by hand and tighten with a box spanner once at the top

5

Hot on the left, cold on the right

Connect the hot and cold water supplies to the flexible tails and turn until tight

6

Your tap is now ready for use

Waste Installation and Operation

1

Fit the waste above the basin ensuring the washer is in place.

2

Push waste into hole until the outer rim sits flush with the bottom of the basin.

Then place the washer from underneath and tighten the backnut to secure the waste to the basin.

3

Push the centre down to close the waste.

Push again to open and release the contents of the basin.

Your waste is now ready for use

General Cleaning

Bristan products are made from premium materials, with hand polished, electroplated, PVD or EPD finishes.

Your taps or shower should be regularly cleaned with warm water, a mild pH-neutral liquid soap, and polished with a soft cloth. Any residues from soap, toothpaste, shampoos and shower gels can cause blemishes if not rinsed off straight after use.

Household bleaches and cleaners contain harsh chemicals and may damage the surface finish. Avoid using abrasive cloths, scouring pads, scrub sponges, steel wool or anything similar.

Maintenance - Cartridge/ Valve Replacement

1

Remove indice by pulling it loose, then undo hex grub screw to remove handle

2

Remove the shroud and retaining nut and then lift the cartridge out of the tap

IMPORTANT
Isolate the water supply before starting!

(Some shrouds may need to be unscrewed by hand before removing)

3

Reverse the steps to replace the cartridges/ valves and handles.

(Grub screw will be located at the front or rear of the handle)

Maintenance - Clean/ Replace Outlet

1a

Housed Outlet

Using an adjustable spanner, unscrew gently to remove the outlet

1b

Recessed Outlet

If provided, insert the key tool into the outlet and twist to release it

Refer to your contents page to identify outlet type

1c

Coin Slot Outlet

Using a coin, insert into the slot on the outlet and twist to release it

2

Check all loose parts for any damage, then soak using a suitable solution to de-scale

3

Reverse the steps to replace the outlet

Troubleshooting

Symptom	Cause	Remedy
Low Flow	Partially closed isolation valve.	Open isolation valve.
	Airlock or partial blockage in the supply pipework.	Flush through pipework to ensure removal of debris and any airlocks.
	Partial blockage in the outlet	Remove to Clean and soak in suitable solution.
No hot water or cycling hot and cold	Instantaneous water heater cycles on and off as flow rate or pressure is too low.	Increase water flow rate or pressure through system.
No Flow	Closed isolation valve.	Open isolation valve.
	Mains water supply turned off.	Turn on mains water supply.
Temperatures not corresponding with taps	Inlet pipes have been connected incorrectly	Swap the inlet tails around.

Notes
